

A Handbook of Communication English Essentials

for

BE/B Arch.

Institute of Engineering, Tribhuvan University

(IOE, TU)

Prabeen Kumar Awasthi

Preface

Welcome to "A Handbook of Communication English Essentials for BE/B Arch Students." As an educator, I recognize that effective communication is not merely a skill; it is an art that forms the cornerstone of success in the realms of architecture and engineering. This handbook is a response to the unique needs of BE/B Arch students, providing a comprehensive guide to the diverse facets of communication in English.

The ability to convey ideas with precision and eloquence is paramount in our personal as well as professional lives. This handbook is designed to be the students' trusted companion on this linguistic journey, offering insights into various forms of communication, including reports, proposals, notices, minutes, presentations, research articles, and reading comprehension.

Through this handbook, I invite the students to explore the art of expression, recognizing that your words are not just a means of communication but a reflection of your intellectual prowess. Whether you are drafting a report, composing a proposal, or deciphering the nuances of different English varieties, this handbook provides guidance and answers to the questions that have challenged the students in various examinations conducted by the Institute of Engineering, Tribhuvan University (IOE, TU) in the past.

I extend my deep sense of gratitude to **Er. Ashok GM** and **Er. Devendra Kathayat** for their encouragement and sheer positivity, which motivated me throughout the process of writing this handbook. Additionally, I would like to thank Er. Himal Chand Thapa, Mr. Chiranjibi Devkota, Er. MD Abrar Alam, Er. Subarna Singh Raut, Er. Narayan Adhikari, Er. Shiva Raj Luitel, Er. Rajendra Thakulla, and Mr. Dhruva Lamichhane for the fruitful discussion sessions around the date. And to everyone else who helped along the way, cheers!

Reading Comprehension (for B Arch)

Composing and Editing Strategies (for BE)

Composing Strategies

Composing non-technical documents

When composing any piece of writing, especially non-technical documents such as an essay, an opinion piece, or a paragraph, consider the following:

- Make a list of important ideas related to the topic.
- Organize your ideas under different topics.
- Ensure that your expressions are grammatically correct.
- Use punctuation marks properly.
- Organize your ideas effectively, i.e. your writing should be coherent and cohesive.

Composing Technical Documents

When composing technical documents, it's crucial to consider the following:

- **Language.** Use plain English; avoid complex vocabulary, jargon, and clichés. Opt for short sentences.
- **Format.** Technical documents should adhere to specific formats, such as reports, proposals, record-keeping forms (service reports, travel and expense forms), instructions (user guides, online help), correspondence (letters, memos, emails), and presentations (interviews, marketing calls, seminars).
- **Clarity and Conciseness.** Technical documents should prioritize clarity and conciseness. Clarity facilitates comprehension by using simple language, easy sentence constructions, and appropriate means of transmission. Conciseness saves time; the message should be as brief as possible to prevent confusion or inaction. Information should be just enough—neither too much nor too little.
- **Organization.** Organize information and elements in technical documents systematically.
- **Layout.** The appearance of technical documents should be attractive.

- **Components/Elements.** One should ensure that technical documents include all necessary components.
- **Length.** Take into consideration the length of your document, especially when preparing the document with word limitation.

Editing Strategies

When editing the text, consider the following factors:

- **Grammatical elements in the text.** subject-verb agreement, proper use of prepositions, conditionals, and articles.
- **Tense.** ensure the correct form of verbs is employed.
- **Word selection.** assess the appropriateness of adjectives, adverbs, nouns, and verbs.
- Spelling of word/s
- Proper utilization of various punctuation marks.
- Exclude unnecessary words and add words where necessary.

By considering these factors, various pieces of writings can be effectively proofread and edited.

Note. There is a room for subtle variations in the way you edit the given text.

Your leader is my son she said and not one of the soldiers doubt it. They fell in beside her, singing his praises, saying how clever and brave he is, and she listen to them with head proudly raise, showing no surprise. (2074 Chaitra)

Edited text

"Your leader is my son," she said, and none of the soldiers doubted it. They fell in beside her, singing his praises, saying how clever and brave he was. She listened to them with head proudly raised, showing no surprise.

Interpreting the Text (for BE)

Interpretation involves the act of finding hidden, unstated or implied meaning of the text. When we interpret the text, we should present the moral or implicit message of the text in our own words. It is a personal judgment of the text.

Following techniques must be taken into consideration when interpreting the text:

- Do not give title.
- Start your interpretation with the main idea (By referring to the text or without referring to it).
- Support your main idea with sufficient details.
- Restate your main idea to wrap up/conclude your interpretation.
- Do not copy exact sentences from the text but you can take some words or phrases from the text to enhance the credibility of interpretation.
- Write interpretation in a single paragraph.

Note: No interpretation is final or complete. Interpretation is a personal judgment of the text. Thus, a single text can have multiple interpretations.

Exemplary Junction

1. Read the following text and interpret its meaning in your own language.

By teaching all other subjects, except moral values, we may produce great scientists, engineers, doctors, scholars, management experts and litterateurs etc. comparable with the best anywhere in the world but if these great professionals do not have peace of mind and qualities of love and kindness, what kind of society will we have? (2075

Chaitra)

Interpretation

The text focuses on the idea that essence of a prosperous society hinges on the cultivation of moral values, such as love and kindness, among its professionals. These virtues serve as the bedrock for harmonious coexistence and societal advancement. When professionals across various domains, including doctors, engineers, politicians, writers, and teachers, deviate from these moral principles, its consequences can be detrimental to society. A society witnesses the erosion of trust in healthcare when

doctors prioritize profit over patient care, the crumbling of infrastructure when engineers compromise safety for expedience, the decay of governance when politicians forsake ethics for personal gain, the distortion of truth when writers prioritize sensationalism over integrity, and the degradation of education when teachers abandon the nurturing of character for mere academic achievement. In such a scenario, the very foundation of society begins to unravel, posing a threat to its well-being and impeding progress. Hence, the role of moral values proves to be equally indispensable as human knowledge, collectively contributing to the betterment of society, fostering a culture of compassion, integrity, and sustainable progress.

2. Read the following text carefully and interpret it so as to make the meaning clear.

The third great defect of our civilization is that it does not know what to do with its knowledge. Science has given us powers fit for the Gods, yet we use them like small children. For example, we do not know how to manage our machines. Machines were made to be man's servant; yet he has grown so dependent in them that they are in a fair way to become his masters. Already most of the men spend most of their lives looking after and waiting upon machines. And the machines are very stern masters. They must be fed with coal, and given petrol to drink, and oil to wash with, and they must be kept at the right temperature. And if they do not get their meals when they expect them, they grow sulky and refuse to work, or burst with rage, and blow up, and spread ruin and destruction all round them. So, we have to wait upon them very attentively and do all that we can to keep them in good temper. Already we find it difficult either to work or play without the machines, and a time may come when they will rule altogether, just as we rule the animals. (2074 Chaitra)

Interpretation

In the twenty-first century, human beings find themselves ensnared by their own inventions, grappling with the consequences of their overdependence on technology. This is evident in the younger generation's ubiquitous engagement with the internet, spending valuable time in the virtual realm instead of fostering tangible connections. The impact of mass media, particularly the corrosive influence of social media, has left

an indelible mark on human relationships, eroding genuine connections and substituting them with digital facades. Tragic events, such as bomb explosions causing the loss of thousands of lives, serve as stark reminders of the destructive potential wrought by our technological advancements. Additionally, everyday accidents further underscore the perils of our reliance on machines. The contemporary landscape is marked by a poignant irony: humans, in the present age, often allocate more time to machines than to their own families, exemplifying the profound shift in societal dynamics. In this context, it becomes increasingly evident that our inventions, once hailed as tools of progress, have the potential to subjugate us if left unchecked. Thus, the modern reality emphasizes the urgent need for a recalibration of our relationship with technology to reclaim our identity.

3. Read the following text carefully and interpret it so as to make the meaning clear.

The survival of the publishing industry depends upon the existence of a public who will buy the printed word in the form of newspapers, books and magazines. Over the past several years, however, the advance of electronic media, particularly CD-ROMs, online computer services, and the internet, has made information available to the public electronically without the need for printed materials. As the availability of electronic media increases and as it is more easily accessible, the public has less need for printed materials. (2079 Bhadra)

Interpretation

The text emphasizes the idea that electronic media is gaining greater popularity among the public compared to printed media, primarily due to its enhanced accessibility. The advent of technologies like CD-ROMs, online computer services, and the internet has significantly democratized information, making it easily and readily available to the public. One of the pivotal advantages lies in the ease of access and storage offered by electronic media, allowing users to retrieve and store vast amounts of information conveniently. Moreover, the cost-effectiveness of electronic media in comparison to printed forms has contributed significantly to its widespread adoption. Electronic platforms facilitate swift and efficient searches, enabling users to access the specific

information they need with unprecedented convenience. Furthermore, the proliferation of articles on a single topic in the electronic realm provides a breadth of perspectives and insights that would be financially impractical to amass through printed media. This democratization of knowledge enhances the user experience, fostering a more informed and diverse understanding of various subjects. Consequently, the formidable convenience, cost-effectiveness, and information richness associated with electronic media have propelled it to the forefront of public preference. As a consequence of these factors, the traditional domain of printed media faces an existential threat. Thus, the public's inclination towards electronic media, with its manifold advantages, poses a substantial challenge to the future viability of printed publications.

4. Read the following text carefully and interpret it so as to make the meaning clear.

The history of civilization shows man always how has to choose between making the right and wrong use of discoveries of science. This has never been truer than in our own age. In a brief period, amazing discoveries have been made and applied to practical purposes. It has become a platitude to say- we are living in an age of revolution. (2078 Bhadra)

Interpretation

The text presents the idea that the perpetual choice that humanity faces presently is in utilizing scientific inventions for either beneficial or detrimental purposes. This dilemma is particularly pronounced in the present era, characterized by a rapid succession of remarkable scientific breakthroughs that have swiftly found practical applications. There is transformative impact of these discoveries, portraying the contemporary age as one marked by revolutionary changes. Thus, as there are some incredible scientific inventions in the world at present, the ethical and responsible use of these inventions remains a crucial consideration for the society.

5. Read the given text and interpret its meaning.

The forms and functions of verbal communication vary significantly around the world and reflect striking differences in values and beliefs. These culturally learned patterns usually function on a highly unconscious level and can result in serious conflict, misunderstanding,

and negative stereotyping when people from different cultures interact. To minimize such tensions and problems and to enhance intercultural communication, international travelers should be aware of their own speaking style and the ways it differs from that of the culture they are visiting. By increasing their knowledge of what people in the host country tend to say and how they tend to say it, international visitors will be able to traverse the minefield of cultural differences and adjust to the new environment more easily. (2079 Baisakh)

Interpretation

The text emphasizes the idea that recognizing and understanding the diverse forms and functions of verbal communication across cultures is essential to interact with the people from different culture. It highlights that these patterns, often ingrained at an unconscious level, can lead to serious conflicts and misunderstandings when individuals from different cultural backgrounds interact. Various cultural nuances in communication may give rise to negative stereotypes, emphasizing the need for awareness and sensitivity. To mitigate tensions and challenges in intercultural communication, international travelers should be mindful of their own speaking style and acknowledge the variations compared to the culture they are visiting. By doing so, individuals can navigate potential pitfalls arising from cultural differences and adapt more seamlessly to their new environment. In addition, by being aware of their own communication style and learning about the communication norms of the host country, individuals can foster smoother interactions, minimize conflict, and better adapt to their new environment. Thus, cultural awareness and adaptation are crucial for successful intercultural communication.

6. Read the following text carefully and interpret it so as to make the meaning clear.

The history of civilization shows man always how he has to choose between making the right and wrong use of discoveries of science. This has never been truer than in our own age. In a brief period, amazing discoveries have been made and applied to practical purposes. It has become a platitude to say- we are living in an age of revolution. (2078

Bhadra)

Interpretation

The text focuses on the idea that throughout the history of civilization, humanity has consistently faced the moral and ethical dilemma of choosing between the responsible and irresponsible application of scientific discoveries. The text contends that this choice is particularly critical in the present age, characterized by rapid and groundbreaking advancements in science and technology. The assertion that "we are living in an age of revolution" emphasizes the unprecedented pace of discoveries and their practical applications. To support this idea, the text reflects on the historical context, suggesting that the pattern of grappling with the ethical implications of scientific progress has been a constant throughout the evolution of human civilization. The phrase "history of civilization shows" implies a recurring theme where mankind is confronted with decisions regarding the ethical use of scientific knowledge. The text also draws attention to the contemporary era, highlighting the astonishing speed with which discoveries are being made and implemented for practical purposes. The notion of "amazing discoveries" alludes to the transformative nature of these findings, indicating that they have the potential to reshape various aspects of society. Besides, the text underscores the enduring ethical challenge faced by humanity in choosing how to wield the power of scientific discoveries. It posits that the contemporary era is marked by an unparalleled revolution in science, demanding careful consideration of the ethical implications surrounding the application of these discoveries. Thus, the historical struggle for humans to make ethical choices in the face of scientific progress persists, and this challenge is particularly pronounced in the current age of rapid and transformative advancements.

Note-Making and Summary Writing (for BE and B Arch.)

Note-Making

The term 'note' refers to a succinct written record designed to assist memory. Note-making is an act of jotting down important ideas related to any text. Various types of notes exist based on their intended purpose, such as concept ordering notes, revision notes, research notes, comparative notes, and analytical notes. These notes typically serve to condense the information acquired through reading and listening.

In a broader sense, note-making involves the habit of recording crucial points, arguments, ideas, and information found in both oral and written sources. A good note helps us to summarize the text effectively.

Following are the techniques of note-making:

- Give suitable title to the text.
- Give subtitles where necessary.
- Provide/find details to subtitles.
- Do not copy exact sentences from the text; use your own words to express the idea.
- Do not make a note in sentences-use phrases.
- Never bring anything in your note that is not in the given text.
- Remove minor examples, explanations and details.
- Use certain method of sequencing, such as numerals or letters.

Summary writing

Summary writing is a process of expressing something in our own words without losing its original meaning. Summarizing is done to foster a better understanding of the text.

Techniques of summary writing include:

- Selection: Identify key ideas and essential supporting details.
- Rejection: Exclude unimportant details, repetitions, and examples.
- Substitution: Employ techniques such as combining sentences, breaking sentences, substituting sentences, and replacing words for enhanced clarity and conciseness.

Note: A good note allows you to summarize the text effectively.

Exemplary Junction

1. Read the following passage carefully, make notes and write a summary.

Plagiarism is the use of another person's ideas or expressions in your writing without acknowledging the source. The word comes from the Latin word 'plagiaries' and Alexander Linday defines it as, "the false assumption of authorship: the wrongful act of taking the product of another person's mind and presenting it as one's own." In short, to plagiarize is to give the impression that you have written or thought something that you have in fact borrowed from someone else, and to do so is considered a violation of the professional responsibility to acknowledge.

The most blatant form of plagiarism is reproducing someone else's sentences, more or less verbatim, and presenting them, as their own. Other forms include repeating another's particularly apt phrase without appropriate acknowledgement, paraphrasing someone else's argument as your own, introducing another's line of thinking as your own development of an idea and failing to cite the source for a borrowed thesis or approach. The penalties for plagiarism can be severe, ranging from loss of respect to loss of degrees, tenure, or even employment. At all stages research and writing, you must guard against the possibility of inadvertent plagiarism by keeping careful notes that distinguish between your own musings and thoughts and material you gather from others.

Even without considering the penalties of plagiarism, the best scholars generously acknowledge their debts to others. By doing so they not only contribute to the historiography of scholarship but also help younger scholars understand the process of research and discovery.

Note

Title: Plagiarism

1. Introduction to plagiarism
 - 1.1 copying other's ideas without acknowledgement
 - 1.2 false assumption of authorship–Alexander Linday
 - 1.3 breach of the professional responsibility
2. Blatant forms of plagiarism

- 2.1 duplicating someone else's sentences
- 2.2 repeating other people's apt phrase
- 2.3 paraphrasing someone else's argument
- 2.4 fail to cite properly
- 3. Penalties for plagiarism
 - 3.1 loss of respect
 - 3.2 loss of degrees
 - 3.3 loss of job
- 4. Scholars' activities
 - 4.1 acknowledge the source
 - 4.2 teach young people the process of research

Summary

Plagiarism is the act of using someone else's ideas in our writing without giving credit. It involves falsely claiming authorship and presenting another person's work as your own. This unethical practice can take various forms, including directly copying sentences, using someone else's phrases without acknowledgment, paraphrasing someone's argument, and failing to make proper citations. The consequences of plagiarism are severe, including loss of respect, loss of job and loss of degree. Scholars always acknowledge their debts to others and help to guide young researchers in the field of research and discovery.

2. Read the following passage carefully, make notes and write a summary.

Deforestation is cutting down a large number of trees and clearing out forest areas.

Deforestation is harmful to the environment because it causes a lot of carbon emissions and alters the natural ecosystem. It also contributes to global warming and climate change because plants release the stored carbon into the atmosphere as carbon dioxide when they are cutting down. Deforestation is a severe problem, and we must stop cutting down precious trees. Trees are destroyed to make way for urban development and the cultivation of crops. To expand the land area and construct buildings, production houses and manufacturing plants, we are cutting down trees, and the government is trying its best to avoid deforestation.

The process of deforestation increases the atmospheric level of carbon dioxide that contributes to climate change on the planet. Deforestation has had many adverse effects on the planet. Significant effects of deforestation are climate change, soil erosion, global warming, wildlife extinction and underground water depletion. Besides, there are other consequences such as flooding, shrinking wildlife habitats, and reduced water quality. The decrease in trees and vegetation can lead to an increase in the emission of greenhouse gases and other forms of pollution. Moreover, trees are essential and provide habitats for countless species, and they lose their habitats because of these human activities. They also store large amounts of carbon that can be used as a renewable energy source. When forests are destroyed, carbon is released into the atmosphere, contributing to climate change and global warming.

To maintain the ecological balance, we need to take preventative measures to avoid deforestation. Deforestation can be eradicated by taking the necessary steps to save Earth. The government has to take strict action against deforestation and encourage people to plant more trees. This certainly helps in resolving the after-effects of the loss of trees. In addition, we can start growing plants at home and help our environment heal from the loss of trees and forests.

Note

Title: Deforestation and its consequences

1. Definition of Deforestation
 - 1.1 Cutting down trees and clearing forest areas
 - 1.2 Loss of forest cover and biodiversity
2. Causes of Deforestation
 - 2.1 Urban development
 - 2.2 Agriculture activities
 - 2.3 Demand for land for construction and farming
3. Consequences of Deforestation
 - 3.1 Climate change
 - 3.2 Soil erosion
 - 3.3 Global warming
 - 3.4 Wildlife extinction
 - 3.5 Flooding
 - 3.6 Habitat loss

- 3.7 Reduced water quality
- 3.8 Increased greenhouse gas emissions
- 4. Call to Action to Minimize Deforestation
 - 4.1 Governments: Enforce strict measures, promote tree planting
 - 4.2 Individuals: Grow plants at home, support environmental initiatives
 - 4.3 Conservation efforts essential for ecosystem balance

Summary

Deforestation, defined as cutting trees and clearing forests, leads to the loss of forest and biodiversity. Its causes include urban development, agriculture, and the demand for land. Consequences of deforestation encompass climate change, soil erosion, global warming, wildlife extinction, flooding, habitat loss, reduced water quality, and increased greenhouse gas emissions. To address this issue, governments should enforce strict measures and promote tree planting, while individuals can grow plants at home and support environmental initiatives. Forest conservation efforts are crucial for maintaining ecosystem balance.

2 Read the following text carefully, prepare its notes and write a summary.

Education is an integral part of people's lives; it will either make them or break them in the prospect depending on their careers. Education is broadly diverse today compared to the 1950s because of progressions in teaching methods and other prominent inventions that implement more apparent teaching techniques. Online learning is one of the imminent trends in the education sector around the globe at present. This mode of learning is done through the internet. With advanced and upgraded technologies, this mode of learning has been made simpler. Online Education is also preferred in higher learning Institutions.

In E-learning, the students study from home or any other place, that is most convenient for them. They can acquire learning material online. The study materials in online education could be texts, audio, notes, videos, and images. Online learning has its various benefits. It is suitable for those who cannot visit or obtain the traditional education method for one reason or the other. Nearly 6.1 million college students are currently attending online courses, and this number is growing by around 30 percent yearly. Online education provides a myriad of advantages for people, as well as companies because it allows for, among others, flexibility. Online education's potential advantages involve increased educational access; it provides a

high-quality learning opportunity, improves student outcomes and skills, and expands educational choice options.

Note

Title: Modes of Education

1. Importance and nature of Education
 - 1.1 Integral part of people's lives
 - 1.2 Crucial for career prospects
 - 1.3 More diverse at present due to advancements in teaching methods and technology
2. Emergence of Online Learning
 - 2.1 global trend currently
 - 2.2 Enabled by internet and advanced technologies
 - 2.3 Preferred in higher learning institutions
3. Features and Benefits of Online Learning
 - 3.1 Study from home or any convenient location
 - 3.2 Access learning materials online
 - 3.2.1 texts, audio, notes, videos, and images
 - 3.3 Suitable for those unable to pursue traditional education
 - 3.4 Growing popularity
 - 3.4.1 6.1 million college students
 - 3.4.2 Users growing by around 30% yearly
 - 3.5 Beneficial for individuals and companies
 - 3.5.1 Flexibility and increased access
 - 3.5.2 high-quality learning and improved outcomes

Summary

Education is crucial for individuals' lives and career prospects, with advancements in teaching methods and technology making it more diverse today. Online learning has emerged as a global trend, enabled by the internet and advanced technologies, and is preferred in higher learning institutions. It offers the flexibility to study from home, access diverse learning materials, and is suitable for those unable to pursue traditional education. With 6.1 million college students currently enrolled and a 30% annual growth, online learning provides increased access, high-quality learning, and improved outcomes for both individuals and companies.

4 Read the following passage carefully, make notes and write a summary.

There is an enemy beneath our feet – an enemy deadlier for its complete impartiality. It recognizes no national boundaries, no political parties. Everyone in the world is threatened by it. The enemy is the earth itself. When an earthquake strikes, the world trembles. The power of a quake is always greater than anything human beings themselves can produce. Today scientists are directing a great deal of their efforts into finding some way of combating earthquakes, and it is possible that sometime in the near future people will have discovered a means of protecting themselves. An earthquake strikes without warning. When it does, its power is immense. If it strikes a modern city, the damage it causes is as great as if it has struck a primitive village. Gas mines burst, explosions caused. Underground railways are wrecked. Whole buildings collapse, bridges fall, dams burst. Gaping crevices appear in busy streets. If a quake strikes at sea, huge tidal waves sweep island. If it strikes in mountain regions, avalanches roar down in to the valley.

Consider the terrifying statistics from the past. Lisbon, the capital of Portugal, was destroyed entirely and 450 people were killed in 1755. In Peru, fifty thousand people died in an earthquake in 1970. In 1968, an earthquake struck Alaska. As this is a relatively unpopulated part, only few people were killed. But this is likely that this was one of the most powerful quakes ever to have hit the world. Geologists estimate that during the tremors, the whole of the state moved ahead over eighty feet farther west in to the Pacific Ocean. Imagine the power of something that can move an entire subcontinent! This is the problem that faces scientists. They are dealing with forces so immense that human beings cannot hope to resist them. At least some precautionary measures can be taken to save lives and some of the property.

Note

Title: Earthquake

1. Features on an earthquake
 - 1.1 no recognition to political parties and national boundaries
 - 1.2 makes the world tremble
 - 1.3 Uncertain/unpredictable
- 5 Effects of an earthquake
 - 1.4 Gas mines burst
 - 1.5 explosions occur
 - 1.6 railways wrecked
 - 1.7 buildings collapse
 - 1.8 bridges fall
 - 1.9 dams burst
 - 1.10 crevices in the streets
 - 1.11 avalanches in the mountains
 - 1.12 huge tidal in the sea
2. Consequences of earthquakes in the past
 - 2.1 Lisbon-1755
 - 2.1.1 city destroyed
 - 2.1.2 450 killed
 - 2.2 Alaska-1968
 - 2.2.1 few people killed
 - 2.2.2 the most powerful quake ever
 - 2.2.3 state moved forward for over eighty feet
 - 2.3 Peru-1970
 - 2.3.1 fifty thousand people killed
3. Scientists' efforts
 - 3.1 suggest precautionary measures to save lives and property

Summary

An earthquake has occurred as the greatest enemy for human beings, as it is impartial, uncertain, and destructive. When an earthquake takes place, gas mines burst, buildings collapse, railways are wrecked, bridges fall, dams burst, and crevices occur in the streets. Additionally, avalanches roar in the mountains, and huge tidal occurs in the sea due to earthquakes.

An earthquake took place in Lisbon in 1755, where the city was completely destroyed and 450 people were killed. Likewise, the most powerful earthquake struck Alaska in 1968, where only a few people were killed. But it made the state move forward for over eighty feet. In addition, earthquake struck Peru in 1970, and thousands of people were killed. Even scientists do not hope to resist earthquakes. They focus on minimizing the severe consequences by suggesting precautionary measures to people.

Reading Comprehension (for BE)

Reading involves an act of decoding the text. Reading comprehension refers to reader's ability to read, summarize and interpret or respond appropriately to the text. It is reader's ability to interact with the text. There are four levels of interaction with the text.

- i) **Literal Comprehension.** At this level, readers focus on understanding the explicit content of the text. This involves grasping facts, details, and information directly presented in the text. Readers demonstrate literal comprehension when they can accurately recall and summarize key points from the text.
- ii) **Interpretation.** Interpretation involves analyzing and interpreting the text's deeper meaning. Readers consider implicit information, infer meanings, and make connections between different parts of the text. This level requires readers to go beyond the surface and understand the author's intended message.
- iii) **Critical Thinking.** Critical thinking takes the analysis further by encouraging readers to evaluate the text. This involves assessing the logic, validity, and reliability of the information presented. Readers at this level may question the author's arguments, identify biases, and form judgments based on their own knowledge and perspectives.

iv) **Creative Comprehension or Assimilation.**

It is considered the highest level of interaction that involves creative engagement with the text. Readers not only understand and analyze but also connect the text to their own experiences, relate it to other works, or generate new ideas inspired by the material.

Creative comprehension encourages readers to think beyond the text, fostering a deeper and more personal connection with the content.

These levels together form a comprehensive framework for engaging with and understanding the text, ranging from basic comprehension to critical analysis and ultimately generation of new insights.

1. KNOWLEDGE AND WISDOM

Bertrand Russell

This text was written by the popular philosopher Bertrand Russell. In this text, he makes a distinction between knowledge and wisdom. Knowledge means knowing about things (called facts) and the causes of things. It is the accumulation of facts and data that you have learned about or experienced. In this sense, knowledge is something we acquire through effort. So, a knowledgeable person knows about 'what' and 'why'. For example, knowledgeable knows that not only fire is hot but also why and how it is hot. But wisdom is a different thing. It is the highest state of consciousness. According to Russell, knowledge is defined as the acquisition of data and information while wisdom is defined as the practical application and use of the knowledge to create value. A wise person will employ that knowledge not only for his own benefit but also for the benefit of others. A wise person uses fire to develop a more fuel-efficient automobile. Hence, wisdom is the ability to detect and judge which aspects of that knowledge are true, right, lasting, and applicable to our lives. It is the ability to apply that knowledge to the greater scheme of life. It is about knowing the reason or meaning of why something is and what it means to our lives.

Russell, in his essay, talks about scientists learning about "atomic energy" and obtaining the knowledge of how to "split the atom." But those same scientists were unwise because they temporarily "forgot" (or didn't think about) who would use that knowledge to make atomic bombs and do harm. Russell thinks that wisdom should be the aim of education when he says the essence of wisdom is emancipation, as far as possible, from the tyranny of the here and now (knowledge is largely of the "here and now" of things). We cannot help the egoism of our senses. Sight, sound, touch, and emotions are bound up with our own bodies and cannot be made impersonal. An infant feels hunger or discomfort and is unaffected except by his own physical condition. But gradually, as his thoughts and feelings become less personal, he gains growing wisdom. No one can view the world with complete impartiality. But it is possible to make a continual approach towards impartiality, which constitutes growth in wisdom.

Russell says the "end" of all human endeavors should be wisdom, since the capacity for wisdom defines human beings and distinguishes them from all other forms of animal life. Russell concludes his essay with the idea that knowledge and wisdom are different but interrelated things. Human knowledge must be balanced with wisdom. Knowledge without wisdom can be destructive. He thinks that with every increase in knowledge and skill, wisdom becomes more necessary.

According to Russell, there are three factors contributing to wisdom. These are:

A sense of proportion: It is the ability to take into consideration all the aspects of our actions while solving the problem and attach due weight to each. It refers to the capacity of a person to take into account all the important factors in a problem and to attach due weight to each.

Comparativeness: It is the ability to bring together a wide range of concepts and see how they all fit together to create the utmost value.

Depth feeling: Depth feeling is required to combine knowledge with wisdom. It is also necessary to combine feelings with knowledge. Our knowledge and feelings should be wide. A person with wide knowledge but narrow feelings cannot work properly. As knowledgeable people, we must develop a feeling of love and kindness toward everything to utilize our knowledge for the utmost benefit of humans and the environment.

Quiz your Understanding

- a) What do you understand by 'sense of proportion'?
- b) How do you differentiate between knowledge and wisdom?
- c) What is the difference between impartiality and wisdom?
- d) What are the factors that contribute to wisdom?
- e) "Even the best technicians should also be good citizen." Explain.

2. OF STUDIES

Francis Bacon

"Of Studies" is the first essay in the first collection of ten essays by Bacon, published in 1597. In this essay, Bacon has made comments on the value and usefulness of reading and learning.

While presenting the benefits and effects of studies, Bacon says that studying alone is insufficient; learning must be balanced by experiences. Diverse studies may help counteract personal imperfections. Bacon proposes that the study may be done for three purposes: Firstly, it may be done for our own entertainment or just to get pleasure, such as reading books on our favorite author, country, scene, etc. Secondly, it may be done just for ornament, it means just to impress others or in the hope of gaining our friend's admiration. Lastly, it may be done to gain competency and proficiency.

The study has several benefits and effects. It provides us with valuable knowledge, reading and learning experiences, logical ideas, and creative skills. It develops our discourse and intelligent capacity. Reading makes us full, conferences make us ready, and writing makes us exact. Therefore, reading, writing, and learning must go together. University scholars read and learn varieties of books, which provide them with multiple benefits: reading history makes us wise, reading poetry makes us witty/intelligent, reading mathematics makes us subtle and creative, reading morals makes us sober and profound, reading natural philosophy makes us deep, wise, and profound, and reading logic makes us argumentative. Bacon suggests three kinds of books, studied differently. There are some books that are to be tasted (read not wholly but in parts). There are some books that are to be swallowed (books read hurriedly). There are some books that are to be chewed (books read with great care and attention).

Knowledge Crossroads

- a) "Study serves for delight, for ornament, and for ability." Elucidate.
- b) "Some books are to be tested, others to be swallowed, and some to be chewed and digested." Elaborate this statement.
- c) Explain the benefits of reading.
- d) How do studies groom up the natural intelligence of human beings?

3. THE MOTHER OF A TRAITOR

Maxim Gorky

"The Mother of a Traitor" by Maxim Gorky is a short story that deals with dual love: love for the country and love for the son. Monna Marinna's son has become enemical towards his own country. He does not have any real grudges (complaint) against the country. However, he wants to destroy the whole city and thus become popular among the citizens. He wants that each citizen and each and every object of the country should know his name and get afraid of him. He is now the head of the troops, who have surrounded the city from all sides and are ready to set fire to it. There is restlessness everywhere in the city. No one is happy. All the people are crying bitterly out of pain. The enemies are giving the utmost torture to the citizens. They have been deprived of all kinds of facilities. The enemies have brown dead bodies in all the streams that supply water to the city. The citizens have lost all hope of life. Everything spoke to them of death, and not a

star was there in the sky to give them consolation. They were also afraid to light the lamps in the houses at night.

Monna Marinna herself is not happy with what her son has become. She thinks of her son and her country as a mother and a citizen respectively. She had thought previously that her son would become a great leader of the country and would do something for the nation. But, to her great dismay, she has found her son as a different and heartless citizen among all the people. He has betrayed his own country and also his mother. Marinna has equal love for her son and for her native city. But, as a mother, her heart is weeping as her son has given suffering to all the citizens. Every citizen calls her "The mother of the traitor," which gives unbearable pain. So, she decides to leave the city and go to her son. She finds her son crazed with the thirst to the glory. She tries to convince her son by telling him that a hero is one who creates life by conquering death. But he answers very arrogantly that the destroyer is as glorious as the builder of the city. He has become so blind for the glory that he remains totally unaffected by her persuasion. Finally, Marinna makes him rest in her lap and immediately covers him with her black cloak, and then kills him by pushing a knife into his heart. Thus, by killing her son, she fulfills her duty as a citizen. But she is also a mother, and a mother cannot live her life comfortably by killing her own son. So, she also kills herself with the same knife.

Quiz Your Understanding

- a) "A mother is known as a symbol of love may turn into a cruel monster." Explain this statement in reference to the text 'The Mother of a Traitor.'
- b) What is the conflict in Monna Marrina's mind and how did she resolve it?
- c) Write the theme of the story 'The Mother of a Traitor' by Maxim Gorky.

4. THE SCIENTIFIC ATTITUDE

The nature of science is based on the keen observation, creativity, and experimentation for finding the facts. So, the nature of scientific attitude is characterized by **creativity, keen observation, objectivity, open-mindedness, skepticism, and willingness or curiosity**. Through the processes of creativity, observation and experimentation, scientists develop knowledge which we apply for the betterment of society. Without any hesitation, we can say that science plays an important role in social development. There are two ways in which science often helps to

develop our society. The first is the application of modern machines, products, and systems of applied knowledge that modern technologies develop. Modern technology has improved the structures of societies. It has made our lives comfortable, extended our life span, and longevity. The second way is its application by all members of society in a special method of thought and action that scientists use in their work. By shaping our views on life, men and society, nature, and reality and providing the meaning of our existence, science directs our thought and action and sets the norms and modes of our conduct. A successful scientist is often full of curiosity. Through the process of creativity and keen observation, one is able to cast a situation, challenge, and problem in a new light which thereby opens up possibilities. He often thinks out of the box and throws light on new probabilities.

A person with a scientific attitude wants to know not only about the universe but also wants to find out how and why the universe works. He often directs his attention toward problems. His curiosity leads him to look at the underlying relationship, even if the data available seems to be unconnected. While making observations and utilizing facts, he observes them to the fullest extent. The successful scientist or technologist thinks and acts in such ways as to characterize him as a good observer, accurate, skeptical, objective, critical, and imaginative. He applies facts to observe things, does not accept statements that are not based on the evidence, and thinks critically to form his opinion.

Quiz Your Understanding

- a) What do you mean by scientific attitude?
- b) What are the qualities of a good scientist?

5. HOW MUCH LAND DOES A MAN NEED?

Leo Tolstoy

The story “How Much Land Does a Man Need?” consists of nine units that contain separate ideas full of moral teaching. It presents the author’s religious experience. It deals with moral problems in country life because of the spiritual crisis created by human greed and temptation. It suggests that human desire has no limitations. Men desire to take possession of more than they need. Thus, greed has no specific boundaries that ultimately lead to death. The protagonist of the

story is a peasant named Pahom, who at the beginning can be heard complaining that he does not own enough land to satisfy him. He states “If I had plenty of land, I shouldn’t fear the Devil himself!” There is Satan sitting behind the stove and listening. A short amount of time later, a landlady in the village decides to sell her state, and the peasants of the village buy as much of that land as they can. Pahom himself purchases some land, and by working off the extra land, he is able to repay his debts and live a more comfortable life. However, Pahom then becomes very possessive of his land, which this causes arguments with his neighbors.

As Pahom has to grow the crops on rented land, it irritates him. Finally, he is introduced to the Bashkirs and is told that they are simple-minded people who own a large amount of land. Pahom goes to them to take as much of their land for as low a price as he can negotiate. Their offer is very unusual: for a sum of one thousand rubles, Pahom can walk around average as much as he wants. Starting at daybreak and marking his route with a spade along the way, if he reaches his starting point by sunset that day, the entire area of land his route encloses will be his, but if he does not reach his starting point, he will lose his money and receive no land. He is delighted, as he believes that he can cover a great distance. That night, Pahom experiences a surreal dream in which he sees himself lying dead by the feet of a devil, who is laughing. He stays out as late as possible, marking out land until just before the sun sets. Toward the end, he realizes he is far from the starting point and runs back as fast as he can to the waiting Bashkirs. He finally arrives at the starting point just as the sun sets. The Bashkirs cheer his good fortune, but exhausted from the run, Pahom drops dead. His servant buries him in an ordinary grave only six feet long, thus ironically answering the question posed in the title.

Quiz Your Understanding

- a) Explain the theme of the text ‘How Much Land Does a Man Need?’
- b) How do you explain Pahom’s excessive greed for more and more land?
- c) Explain the gist of the story “How Much Land Does a Man Need?”

Exemplary Junction

- a) Explain the gist of the story “How Much Land Does a Man Need?”

“How Much Land Does a Man Need?” is a thought-provoking short story written by Leo Tolstoy. The narrative revolves around the character of Pahom, a peasant who is discontent with

his modest landholding. Pahom hears about the Bashkirs, a nomadic tribe, who are willing to sell him as much land as he can walk around in a day for a fixed price. The only condition is that he must return to the starting point by sunset; if he fails, he loses both the land and the money.

Driven by greed and the desire for more land, Pahom embarks on the journey, marking larger and larger tracts of land as he becomes increasingly consumed by the pursuit. Despite warnings from the Bashkirs about the consequences of greed, Pahom continues until he realizes that he has overextended himself. Exhausted, he struggles to return in time and, ultimately, dies on the very land he sought to claim.

The story serves as a powerful allegory, exploring themes such as greed, the consequences of materialism, and the destructive nature of human desires. Tolstoy uses Pahom's tragic journey to highlight the destructive consequences of an insatiable desire for wealth and possessions. The tale underscores the idea that excessive greed can lead to one's downfall, emphasizing the importance of contentment and the recognition of when "enough" is truly sufficient.

In essence, Tolstoy's "How Much Land Does a Man Need?" is a moral fable that prompts readers to reflect on the true meaning of wealth, the dangers of unchecked ambition, and the importance of finding contentment in life.

6. WHAT EINSTEIN DID

The text "What Einstein Did" is taken from *The History of Knowledge*, a general survey of twentieth-century Science and technology. As the title suggests, the text provides a general survey of the great deeds of the popular scientist Albert Einstein, presenting him as both a scientist and a peacemaker.

Albert Einstein was born in the Cathedral city of Ulm, Germany, in 1879. From an early age, he displayed remarkable creativity, making him the greatest scientist of the world. Unfortunately, he did not complete his schooling but later resumed his studies, earning a degree in mathematics from the university in 1900. He then pursued his lifelong interest in solving the riddles of the world. In 1905, he proposed four interrelated papers.

In the first paper, Einstein explained 'Brownian Motion,' a phenomenon observed by biologist Robert Brown in 1827. Brown noticed that pollen grains in water, when observed through a microscope, exhibited jiggling or Brownian motion. Einstein's contribution was significant as he

explained that the motion was caused by water molecules hitting the pollen grains, revealing the existence of atoms and molecules.

The second paper resolved a three-century-old dispute about the composition of light. Einstein proposed that light is composed of photons, exhibiting both wavelike characteristics and particle-like behavior.

Einstein's most distinguished contributions were the theories of relativity presented in the third and fourth papers. The special theory of relativity, introduced in 1905, challenged conventional notions of time and motion, stating that both are relative to the observer if the speed of light is constant. This theory had surprising consequences, such as the relativity of simultaneity, time dilation, and length contraction.

The fourth paper, the 'General Theory of Relativity,' asked whether the inertia of a body depends on its energy content. Einstein concluded with a positive answer, expressing the equivalence in the famous formula $E=mc^2$, considered the most important piece of knowledge in advanced physics.

Einstein's pursuit of peace paralleled his scientific endeavors. Despite receiving the Nobel Prize in Physics in 1921, he remained a pacifist and spoke out against war. In 1939, as the world learned of the split of the uranium atom, Einstein realized the potential danger of war, prompting him to write a letter to President Franklin D. Roosevelt. However, his efforts for peace were hindered, and with the outbreak of World War II, he recognized the devastating impact of the conflict.

Einstein's last hope for peace lay in the United Nations. When he died in 1955, he believed he had contributed significantly to understanding the universe, surpassing any scientist since Newton.

Quiz Your Understanding

- a) "Einstein was the greatest genius of the 20th century." Explain.
- b) Describe the contribution of Einstein to the modern scientific world.
- c) What are Einstein's four scientific papers? Describe them in brief.
- d) "Einstein was the pacifist." Do you agree? Why or why not?

Exemplary Junction

a) "Einstein was the pacifist." Do you agree? Why or why not?

A pacifist is an individual who opposes war, violence, and the use of force as a means of resolving conflicts. Pacifists advocate for peaceful solutions to disputes and believe in the nonviolent resolution of conflicts. They often promote diplomacy, dialogue, and cooperation as alternatives to military intervention or aggression. In this sense, Albert Einstein was a pacifist. Einstein expressed strong anti-war sentiments, especially after the end of World War I in 1918. He was deeply troubled by the devastation caused by the war and had a genuine fear that another war would erupt. His pacifist stance was evident in his public statements and actions. Einstein actively advocated for peace and disarmament. He used his influence to promote international cooperation and understanding, believing that science and knowledge should be used for the betterment of humanity rather than for destructive purposes. Despite receiving the Nobel Prize in Physics in 1921, he remained committed to his pacifist ideals and spoke out against militarism.

One notable instance of Einstein's commitment to peace was his letter to President Franklin D. Roosevelt in 1939, where he warned of the potential military applications of nuclear fission and urged the United States to take action to prevent the development of atomic weapons. Although he later regretted the role his research inadvertently played in the development of such weapons, his initial intention was to prevent their use in warfare.

While Einstein was a pacifist in his ideals and advocacy for peace, it's essential to note that he recognized the complexities of real-world politics and the threats posed by totalitarian regimes. This recognition led him to support efforts against Nazi Germany during World War II, even though he maintained his overall pacifist stance.

In essence, Albert Einstein's life and actions demonstrate a strong commitment to pacifism, as he consistently spoke out against war and sought ways to use scientific knowledge for the promotion of peace and the betterment of humanity.

7. The MIRACLE OF GRASS

Joseph Wood Krutch

The German writer Goethe defines grass as the "living garment of God." Grass possesses an omnipresent quality, spreading widely over mountains, rocks, valleys, fields, etc., as a green

element of nature. Goethe sees it as a green carpet, as it is soft to the feet, restful to the eye, pleasurable to the soul, and a gift for our lives. It flourishes and withers in harmony with the symphony of nature, following the natural system like other living things. This, for Goethe, is not supernatural but a factual part of nature.

In line with Goethe's perspective, scientists present grass in an objective reality. Botanists define grass as one among numerous genera and species composing the family Monocotyledonous flowering plants long known as Gramineae. According to them, all varieties of grass belong to the same class.

The poet addresses the question of what grass is, stating that it represents the unity of national mind and character—the true spirit of the nation—manifesting changes and progress as part of God's design. Ultimately, it is a scented gift for us. However, the author laments that contemporary people are largely ignorant of this tremendous gift, being preoccupied with seeking recreation, entertainment, and artificial substitutes.

Drawing on Henry David Thoreau's perspective, the author notes that more toys a child can play with become a burden rather than a blessing. Economists, like the Puritan Thorstein Veblen, may consider grass a "status symbol," but the author disagrees, stating that this judgment is incorrect. Grass is more than just a lawn or a status symbol; its intrinsic beauty should be considered. Grass lies on the earth's surface, refreshing the fair beauty of spring's true face and bringing freshness to all creatures.

The popular statement "all flesh is grass" is widely accepted by scientists and religious people like St. Peter. According to St. Peter, all flesh is grass because "man too withers, and the flower thereof falls away." For botanists, "all flesh is grass" holds even greater significance than for St. Peter, as no animal, including humans, could exist in this world without green plants.

Quiz Your Understanding

- a) Why does the author say that grass is "a miracle so common that we no longer regard it as miraculous?"
- b) What do the apostle and scientist mean when they say "All flesh is grass?"
- c) "To call grass a trivial thing" is a great ignorance. Explain it.

8. THE USE AND MISUSE OF SCIENCE

The first scientist in the world was prehistoric man, utilizing his brain to invent the simplest devices that could make his life less painful. Science initiated its humble journey from that point.

Over time, science has grown richer and reached its golden age today, revolutionizing humanity to the extent that we refer to this era as the age of science. It is science that guides modern people on how to live.

Uses of Science.

- Science has modernized our homes, introducing innovations that enhance comfort, efficiency, and sustainability.
- Transportation modes like trains, buses, planes, and motor cars, all products of scientific advancements, have significantly shortened travel times and increased comfort in our journeys.
- The radio and television, products of communication technology, not only entertain but also disseminate information, adding to our knowledge and pleasure.
- Telephones and mobile phones, vital communication devices, have transformed the world into a global village, facilitating instant connectivity across vast distances.
- Science has not only extended our lifespan but also improved its quality by providing life-saving drugs and advanced medical facilities, contributing to overall well-being.

Misuses of Science.

- The application of scientific knowledge to create deadly weapons poses a severe threat to global peace and security.
- Industrial and vehicular pollution, byproducts of technological progress, have led to environmental degradation, affecting ecosystems and human health.
- The devastating consequences of two world wars, fueled by technological advancements in weaponry, highlight the dark side of science when used destructively.
- The existence of nuclear bombs poses a constant risk, capable of putting entire cities out of existence and causing widespread humanitarian crises.
- Overreliance on scientific equipment can lead to vulnerability, as seen in cases where essential services collapse during technological failures.

- Excessive screen time, a result of the widespread availability of technology, contributes to issues like sedentary lifestyles, eye strain, and disrupted sleep patterns, particularly among children and adults who spend considerable time watching television and surfing the internet.

While science has undoubtedly brought immense benefits to humanity, it is essential to acknowledge and address the ethical and societal challenges associated with its misuse. Responsible and ethical application of scientific knowledge is crucial for a sustainable and harmonious future.

9. Civil Peace

Chinua Achebe

"Civil Peace" is a short story written by Chinua Achebe that takes place in Nigeria just after the Civil War. The protagonist, Jonathan Iwegbu, is a man who has miraculously survived the war with his family. The story presents the character named Jonathan Iwegbu who counted himself extra-ordinarily lucky. He takes his survival of the war as the "Happy Survival" because he came out of the war with five inestimable blessings—his head, his wife Maria's head, and the heads of three out of their four children. As a bonus he also had his old bicycle—a miracle too but naturally not to be compared to the safety of five human heads. The story revolves around Jonathan's resilience and his ability to find hope and optimism even in the face of extreme adversity.

After the war, Jonathan returns to his hometown to find that his house is still standing, albeit in a damaged state. He is grateful for what he has left and refers to it as "Civil Peace," emphasizing the importance of maintaining a positive outlook despite the challenges.

Jonathan buries his bicycle, which he buried for safekeeping during the war, only to find it intact. This symbolizes a small fortune and adds to Jonathan's sense of good luck.

Jonathan is eager to rebuild his life and decides to use the money he has saved to start a taxi business. He is determined to provide for his family and secure a better future. However, he faces some challenges, including encounters with thieves who attempt to steal his money. Despite these setbacks, Jonathan remains optimistic and continues to work hard.

The story concludes on a hopeful note as Jonathan reflects on the value of life and the importance of appreciating what one has. "Civil Peace" is a poignant narrative that explores themes of resilience, optimism, and the ability to find meaning and joy in the midst of hardship.

Quiz Your Understanding

- a) What is civil peace?
- b) An ideal family always grants the space for hope of life in every difficulty. Elucidate it with reference to the text "Civil Peace."

Exemplary Junction

- a) An ideal family always grants the space for hope of life in every difficulty. Elucidate it with reference to the text "Civil Peace."

"Civil Peace" is a short story written by Nigerian author Chinua Achebe. The story revolves around the aftermath of the Nigerian Civil War, also known as the Biafran War (1967–1970). The protagonist, Jonathan Iwegbu, survives the war and returns to his home in the town of Enugu.

In the context of the statement "An ideal family always grants the space for hope of life in every difficulty," we can analyze how this theme is portrayed in the story:

Survival and Resilience. Despite the immense challenges posed by the war, Jonathan Iwegbu remains optimistic and resourceful. His house is still standing, and he refers to it as "a miracle," considering the widespread destruction caused by the conflict. This resilience reflects the family's ability to find hope in the midst of adversity.

Material Loss vs. Spiritual Wealth. While the Iwegbu family has lost their possessions and wealth, they retain a sense of spiritual wealth and gratitude for the survival of some family members. Jonathan's attitude is one of thanksgiving for the small blessings that remain, such as the survival of three of his four children.

Entrepreneurial Spirit. Jonathan's determination to make the best of his situation is evident when he starts a taxi business using his bicycle. Despite the limited resources, he sees an opportunity to earn a living and provide for his family. This entrepreneurial spirit demonstrates the family's commitment to creating hope and rebuilding their lives.

The Symbolism of the New Currency. The introduction of a new currency symbolizes a fresh start for the country and its people after the war. Jonathan's recovery of 20 pounds buried in his backyard becomes a symbol of hope and possibility, representing a new beginning for his family and the nation as a whole.

In summary, the Iwegbu family in "Civil Peace" exemplifies the ability to find hope in the face of adversity. Despite the challenges brought about by the civil war, the family remains resilient, grateful for the survival of its members, and resourceful in creating opportunities for a better life. The story portrays the idea that, even in difficult circumstances, an ideal family can carve out space for hope and renewal.

10. Freedom

George Bernard Shaw

Shaw starts the text with the question, "Who is a perfectly free person?" According to Shaw, evidently, a person who can do what he likes, when he likes, and where he likes or does nothing if he prefers, is taken as a completely free person. Shaw opines that there is no such person in this world, and there never can be any such person. Whether we like it or not, we must sleep for one-third of our lifetime, wash, dress and undress. We must spend a couple of hours eating and drinking, and a couple of hours to get refreshed. For half of the day, we are slaves to the necessities that we cannot shrink, whether we are monarchs with thousand servants or humble laborers with no servants but our wives. And the wives must take on the heavy slavery of childbearing if the world is still to be peopled. Thus, everyone in this world is a slave to his basic necessities of life, which cannot be shirked. That is why we cannot achieve complete freedom.

According to Shaw, slavery of a man to the nature or basic necessities of life is taken as natural slavery, whereas slavery of a man to man is taken as unnatural slavery. Unnatural slavery can be shirked. We can never be completely free because we are the slave to nature or the basic necessities of life.

Quiz Your Understanding

- a) Who is a perfectly free man? Can a person achieve complete freedom?

- b) What is natural slavery?
- c) What is unnatural slavery?
- d) Unnatural slavery of a man to man is despicable. Elaborate.

Exemplary Junction

a) Unnatural slavery of a man to man is despicable. Elaborate.

George Bernard Shaw's assertion that "Unnatural slavery of a man to man is despicable" reflects his perspective on the ethical and moral implications of human relationships and societal structures. To elaborate on this statement, it is essential to delve into the underlying ideas presented by Shaw.

Voluntariness and Conscious Choice.

Shaw draws a distinction between natural slavery, imposed by the necessities of life, and unnatural slavery, which involves one person willingly subjecting him to another. The term "unnatural" implies that this form of slavery is not an inherent or inevitable aspect of human existence. It is a conscious choice made within the framework of societal structures.

Inherent Freedom vs. Willful Subjugation.

Shaw argues that inherent freedoms are limited by the necessities of life—such as the need to sleep, eat, and fulfill basic bodily requirements. These constraints are considered "natural slavery" because they are universal and unavoidable. In contrast, unnatural slavery involves individuals willingly surrendering their freedom to another person, often influenced by social, economic, or power dynamics.

Moral Evaluation.

The use of the word "despicable" conveys a strong moral stance. Shaw condemns the act of one person enslaving another as morally reprehensible. By using such a term, he emphasizes the negative ethical implications of one individual exerting control or dominance over another through coercion, exploitation, or any form of undue influence.

Advocacy for Autonomy.

Shaw's statement aligns with the advocacy for individual autonomy and freedom of choice. In a society that values principles like democracy and human rights, the intentional subjugation of one person by another contradicts these ideals. Describing it as "despicable" underscores the

importance of respecting individual agency, and promoting a society based on mutual respect and equality.

Social Critique.

The statement also serves as a critique of societal structures that allow or perpetuate such forms of unnatural slavery. Shaw may be highlighting the need for social change, legal reforms, or a shift in cultural norms to eradicate practices that enable one person to exploit or oppress another.

In conclusion, Shaw's assertion against the unnatural slavery of a man to man reflects a moral judgment on the voluntary subjugation of individuals within human relationships. It underscores the importance of recognizing and respecting individual autonomy and stands as a call for societal values and structures that uphold the principles of freedom, equality, and human dignity.

11. The lady with the Dog

Anton Chekhov

Characters:

Dimitri Gurov (a married man), is a banker who has an educated wife. He has involved in an extramarital affair.

Anna Sergeyevna (a married woman). Anna's husband is a government officer. He is old.

"The Lady with the Pet Dog" is a short story written by Anton Chekhov in 1899. The narrative revolves around the clandestine love affair between Dmitri Dmitriyevich Gurov, a Moscow banker, and Anna Sergeyevna, a young woman with a pet dog. Dmitri Dmitriyevich Gurov, a middle-aged Moscow banker, is vacationing in Yalta. He is known for his cynical views on love and relationships, having had numerous affairs and considering women as mere objects of pleasure. In Yalta, he encounters Anna Sergeyevna, a young and attractive woman with a pet dog. Despite his initial intentions of pursuing a brief affair, Gurov finds himself drawn to Anna's charm and sincerity.

Gurov and Anna strike up a conversation and their relationship evolves into a passionate and secretive affair. Both characters grapple with their emotions and the societal

constraints that dictate their actions. Gurov, in particular, undergoes a transformation as he begins to question his previously held beliefs about love and the nature of his own feelings. As the affair progresses, Gurov and Anna face the challenges of maintaining a clandestine relationship. They meet in secret, navigating the complexities of their personal lives and the expectations of society. Chekhov explores the internal conflicts of the characters, highlighting their vulnerabilities and the impact of their actions on their respective families.

The turning point comes when Anna's husband learns about the affair, leading to a confrontation. The revelation forces Gurov and Anna to confront the reality of their situation and the consequences of their actions. Despite the challenges, their bond deepens, and they grapple with the possibility of a future together.

The story concludes with Gurov and Anna facing uncertain futures. The narrative leaves the resolution of their relationship open-ended, inviting readers to contemplate the complexities of love and the human condition.

In essence, "The Lady with the Pet Dog" is a poignant exploration of the transformative power of love, the moral dilemmas faced by individuals in relationships, and the intricate nuances of human emotions. Chekhov's masterful storytelling and insightful character development contribute to the enduring appeal of this classic short story.

Quiz Your Understanding

- a) Describe the relationship between Gurov and Anna Segreyevna.
- b) "Love is a universal migraine." Explain this statement in reference to the text "The Lady with the Pet Dog."

12. Chain Reaction

A chain reaction refers to a sequence of events where one event triggers a series of interconnected events, each leading to the next. This concept is prevalent in various fields, including physics, chemistry, biology, and social sciences. Here, I'll provide an overview of chain reactions in different contexts.

Nuclear Chain Reaction.

One of the most well-known examples of a chain reaction is the nuclear chain reaction. In nuclear physics, a chain reaction occurs when the nucleus of an atom undergoes a fission reaction, releasing a significant amount of energy and several neutrons. These neutrons can then cause the fission of other nearby nuclei, leading to a self-sustaining and exponentially growing reaction. Nuclear chain reactions are the fundamental principle behind the operation of nuclear reactors and atomic bombs.

Chemical Chain Reaction.

In chemistry, a chain reaction is a process in which the initiation of a chemical reaction leads to a series of subsequent reactions. This can happen in polymerization reactions, combustion processes, and radical reactions. For example, in the combustion of hydrocarbons, the initial reaction between the hydrocarbon and oxygen produces heat and other reactive species, leading to the successive combustion of adjacent molecules.

Biological Chain Reaction.

In biology, chain reactions are evident in various biological processes. An example is the clotting cascade in blood coagulation. When a blood vessel is injured, a series of enzymatic reactions occur, each triggering the next, leading to the formation of a blood clot. Similarly, signal transduction pathways in cells often involve chain reactions where one molecule activates another in a sequential manner.

Social and Economic Chain Reactions.

In social sciences and economics, chain reactions describe the ripple effects of an initial event throughout a system. For instance, a financial crisis in one country can lead to a chain reaction affecting global markets, currencies, and economies. Similarly, a political decision or social movement can set off a chain reaction of events that reshape the political landscape or societal norms.

Physics and Energy.

Chain reactions also occur in physics and energy-related phenomena. In a domino effect, the falling of one domino can trigger a sequence of falls in adjacent dominoes. This simple example illustrates the principle of a chain reaction, where a small action leads to a larger, cumulative outcome.

Understanding chain reactions is crucial in various scientific and practical applications, ranging from the controlled release of energy in nuclear reactors to the propagation of information and influence in social systems. Analyzing and managing chain reaction is essential for predicting and controlling outcomes in complex systems across different disciplines.

Quiz Your Understanding

- a) Define chain reaction.
- b) What is chain reaction and how does it support the Einstein's theory?

Exemplary Junction

a) What is chain reaction and how does it support the Einstein's theory?

A chain reaction is a sequence of reactions where a reactive product or by-product causes additional reactions to take place. In the context of nuclear physics, a chain reaction often refers to a self-sustaining series of nuclear fission reactions.

Einstein's theory that you might be referring to is likely the mass-energy equivalence principle, encapsulated by the famous equation $E=mc^2$, where E is energy, m is mass, and, c is the speed of light. This principle suggests that mass can be converted into energy and vice versa. Nuclear reactions, such as nuclear fission, are examples of mass-energy conversion. In a nuclear chain reaction, the process starts with the fission of a nucleus, typically that of a heavy atom like uranium-235. This fission event releases a significant amount of energy and several neutrons. These neutrons can go on to cause fission in nearby nuclei, releasing more energy and more neutrons. This continues in a self-sustaining manner, creating a chain reaction.

Now, to relate this to Einstein's theory, when a nucleus undergoes fission, a small amount of mass is converted into a large amount of energy according to $E=mc^2$. The released energy sustains the chain reaction, as it is the driving force for the subsequent fission events. The total mass of the fission products is slightly less than the mass of the original nucleus, and this mass difference is converted into energy. This process exemplifies the mass-energy equivalence principle and supports Einstein's theory.

It is important to note that while chain reactions can be harnessed for useful purposes, such as in nuclear power plants, they can also be highly destructive if uncontrolled, as seen in nuclear weapons.

13. Straight and Crooked Thinking

Straight and Crooked Thinking is a book written by Robert H. Thouless, first published in 1930. The book explores the various ways in which people engage in flawed or biased reasoning, leading to errors in judgment and decision-making. The author aims to expose and analyze common fallacies and pitfalls in human thinking, with the goal of promoting clearer and more rational thought processes.

Key ideas discussed in the text include the following:

Logical Fallacies.

Thouless identifies and discusses a range of logical fallacies that people often employ in their thinking. These fallacies include ad hominem attacks, generalizations, false analogies, and many others. The book provides examples of these fallacies to help readers recognize and avoid them in their own reasoning.

Psychological Factors.

The author delves into the psychological aspects of thinking, highlighting how emotions, personal biases, and social influences can impact reasoning. He emphasizes the need for individuals to be aware of these factors and strive for objectivity in their thinking.

Critical Thinking.

Straight and Crooked Thinking advocates for the development of critical thinking skills. The book encourages readers to question assumptions, evaluate evidence, and analyze arguments systematically. By fostering a more disciplined and logical approach to thinking, individuals can make better-informed decisions.

Communication and Persuasion.

The book explores how people use various tactics to persuade others, sometimes relying on fallacious reasoning or manipulation. Understanding these techniques is crucial for individuals to be able to critically assess information presented to them and avoid being unduly influenced.

Educational Implications.

Thouless discusses the implications of his insights for education. He argues that teaching critical thinking should be a fundamental part of education to equip individuals with the skills necessary for clear and rational thought. This involves not only understanding logic but also recognizing and addressing psychological biases.

Practical Applications.

The book provides practical guidance on how to identify and rectify crooked thinking. It encourages readers to approach problems with an open mind, consider alternative perspectives, and be willing to revise their opinions in the face of new evidence.

Overall, *Straight and Crooked Thinking* serves as a guide to improving one's thinking processes by identifying and rectifying common errors in reasoning. It remains relevant for individuals seeking to enhance their critical thinking skills and navigate a world filled with complex information and persuasive messages.

Quiz Your Understanding

a) Why do people make avoidable errors, and what sorts of people make them?

Exemplary Junction

a) Why do people make avoidable errors, and what sorts of people make them?

According to the text, *Straight and Crooked Thinking* by Robert H. Thouless, people make avoidable errors due to a combination of cognitive biases, emotional influences, social pressures, lack of information or expertise, and decision-making heuristics. The text emphasizes some key factors contributing to errors in thinking that can be explained as follows.

Cognitive Biases.

The book discusses various cognitive biases, such as confirmation bias and availability heuristic, which can lead individuals to make errors by favoring information that aligns with their existing beliefs or relying on easily accessible but potentially misleading information.

Emotional Influences.

Thouless highlights the impact of emotions on decision-making. Strong emotions, stress, and fatigue can impair rational thinking, making individuals more prone to avoidable errors.

Social Influences.

The text addresses social factors, including groupthink and social pressure. People may conform to group opinions or societal norms, even if these lead to incorrect decisions, emphasizing the role of social dynamics in shaping thinking.

Lack of Information or Expertise.

Ignorance, a lack of knowledge, or misinterpretation of information can contribute to errors. The book underscores the importance of seeking comprehensive and accurate information and being aware of one's limitations.

Decision-Making Heuristics.

The author discusses decision-making heuristics like the availability heuristic and anchoring, which can lead individuals to rely on mental shortcuts rather than thorough analysis, resulting in errors.

Personality Traits.

While not explicitly outlined in the summary, the book suggests that personality traits, such as overconfidence or perfectionism, can contribute to errors. For example, overconfident individuals may overlook their own limitations, and perfectionists may be overly focused on avoiding mistakes, ironically increasing the likelihood of errors.

In essence, individuals who are unaware of various cognitive pitfalls, those who succumb to emotional or social pressures easily, and those lacking critical thinking skills may be more susceptible to making avoidable errors. But anyone, regardless of their background or intelligence, can fall prey to flawed thinking patterns.

Grammar (for BE and B Arch.)

Grammatical proficiency plays a crucial role in effective communication for several reasons.

Here are some key points highlighting its importance:

- **Clarity of Expression.**

Proper grammar ensures that your ideas are conveyed clearly and accurately. It helps to avoid misunderstandings and misinterpretations by providing a structure that facilitates smooth communication. Correct grammar ensures that sentences are well-formed and ideas are presented in a logical order.

- **Professionalism.**

In many professional settings, the way you communicate reflects on your professionalism. Well-constructed and grammatically correct messages contribute to a positive impression. Employers often value employees who can express themselves clearly and accurately, whether in written reports, emails, or other forms of communication.

- **Credibility.**

Using proper grammar enhances your credibility. When your communication is free from grammatical errors, people are more likely to trust the information you provide. It signals attention to detail and a commitment to quality, which are important qualities in various personal and professional contexts.

- **Effective Writing.**

Whether you're writing reports, essays, or any other form of written communication, grammatical proficiency is essential for effective writing. It helps you organize your thoughts and ideas in a coherent manner, making it easier for your audience to follow your argument or narrative.

- **Global Communication.**

In today's interconnected world, where communication often spans international borders, a common grammatical standard facilitates understanding among people from diverse linguistic backgrounds. Proper grammar helps bridge language barriers, making communication more accessible and inclusive.

- **Avoidance of Ambiguity.**

Incorrect grammar can introduce ambiguity into your communication. Ambiguous sentences can be interpreted in multiple ways, leading to confusion. Clarity in grammar helps eliminate ambiguity and ensures that your message is understood in the way you intended.

- **Formal and Academic Requirements.**

In academic and formal writing, adherence to grammatical rules is often a requirement.

Whether you're writing an academic paper, a business proposal, or any other formal document, maintaining grammatical proficiency is essential for meeting the standards of these contexts.

- **Enhanced Reading Comprehension.**

Proper grammar aids in reading comprehension. Readers can more easily grasp the meaning of a text when it is grammatically correct. This is especially important in educational and professional settings where information needs to be absorbed accurately and efficiently.

- **Language Appreciation.**

Proficiency in grammar reflects an appreciation for the nuances and beauty of language. It allows individuals to express themselves more eloquently, fostering a deeper connection with the language and its rich cultural and literary heritage.

In summary, grammatical proficiency is fundamental to effective communication, influencing how ideas are expressed, received, and understood. It is a valuable skill that contributes to personal and professional success in various aspects of life.

❖ Use of Tense

Some Tricks for the correct use of verb forms.

i) Sentences with Adverbs of time–frequency such as 'always, often, seldom, frequently, usually, generally, occasionally, daily, weekly, every day, once a day/week/month, on Sundays etc.' take the I form of Verb (V1) + s/es (if applicable as per rules of Present Indefinite Tense).

Examples,

She always comes late.

We go to movies on Sundays.

I take tea twice a day.

- ii) We use Present Perfect with adverbs like 'just, already, yet, so far, recently, in the last few days, lately, till now, till, until, ever, never, since, and for, etc. Examples,

I haven't eaten anything since this morning.

I have never seen a dinosaur.

She has just gone out.

He has already ordered for Pizza.

- iii) We say "It is the first time something has happened." For example,

It is the first time I have advised you.

It is the third time Shivraj has phoned Susmita.

- iv) We follow this structure: It has +v3+time+since+subject+v2. For example,

It has been two months since I met her.

- v) We use Future Perfect for an action that began in the past is continuing at present and will be accomplished at or by a particular time in the future. Example,

I will have completed my project report by this time tomorrow.

- vi) The past time adverbials such as 'yesterday, last week/month/year, in 2022, ago, long ago, once upon a time, etc.' when used in sentences generally take **II** form of the verb (V2). For example,

He came to see me every day last week.

Last year she wore the same dress.

Whenever I went to see him, he was out.

- vii) The adverbials related to present time e.g. now, still, at this time, at this moment, at present, today, now-a-days, Look! etc. when used in sentences they generally take the Present Continuous Tense form. Examples,

She is still weeping.

Look! The dog is chasing the cat.

Today I am not going to school.

- ix) If conjunctions like 'when, while, as' etc. are used to express two actions in a sentence, one action is in the Past Continuous Tense form. For example,

When I saw her, she was weeping.

While she was studying, her brother was playing.

As I was watching TV, I heard a loud noise.

- x) Two sentences when connected with words such as 'before or after', if one is in the Past Indefinite tense form, the other will always be in the Past Perfect tense form. For example,

(a) Past Perfect + before + Past Indefinite.

I had turned on the light before I entered the house.

(b) Past Indefinite + after + Past Perfect.

I left the house after I had locked the door.

- xi) Words like next week/month/year, I guess, I think, probably, perhaps, I hope, I expect, I believe, etc. if used in a sentence, they take future Indefinite (will/shall+V1). For example,

I think it will rain soon.

- xii) If the decision of performing an action is taken spontaneously at the time of speaking, then 'will+V1' is to be used in the sentence. For example,

I am hungry. I will order Pizza.

- xiii) Future activity to take place according to some fixed time table, takes Present Indefinite Tense form. For Example,

Our school opens at 9:40 am.

- xiv) Phrases like 'for a couple of years, all the while, this time, next week / month / year, in the future, in the next few days take continuous form showing future time. For example,

This time next week, I will be setting question papers.

- xv) Use Future Perfect form in sentences which have by + time, in + time, before + present time. For example,

By the time next week, I will have completed my revision.

He will have returned to Kathmandu in two days.

- xvi) To describe two past actions taking place simultaneously, we use past indefinite for both actions. Example,

I liked her as soon as I saw her.

The students greeted the teacher as soon as he entered the class.

Exemplary Junction

- a. I hear that he.....now. (sings, **is singing**)
- b. The patientbefore the doctor came. (died, **had died**)
- c. He congratulated me for what.....(I did, **I had done**)
- d. She came when.....(**it was raining**, it rained)
- e. I wish.....a bird (I was, **I were**)
- f. I wish I.....a house in Kathmandu. (**bought**, will buy)
- g. It is the first time I.....(am advising you, **have advised you**)
- h. No sooner had he reached the station then the train(had left, **left**)
- i. It is the time we.....home. (go, **went**)
- j. Iher as soon as I saw her.(**liked**, had liked)
- k. She acts as if she.....an actress. (is, **were**)
- l. He acted as if he.....it. (did, **had done**)
- m. He behaves as if we.....his slaves. (are, **were**)
- n. The rain.....before the lightning flashed. (already stopped, **had already stopped**)
- o. Let's go out. It.....any more. (**is not raining**, will not rain)

❖ Subject-Verb Agreement

Subject-verb agreement means that a subject and its verb must be both either singular or both plural. A singular subject takes a singular verb. A plural subject takes a plural verb.

- i) Nouns used with a quantifier (*some, any, all, and most*) can be singular or plural. This depends on whether the noun is countable or uncountable. For example,

Some of the policies (They) were rejected whilst others were approved. (policies = plural countable noun)

Some of the research (It) was conducted at the University of Melbourne. (research = uncountable noun)

- ii) After a subject joined by *either ... or, neither ... nor, or not only ... but also*, the verb agrees with the subject nearest to it.

***Neither the lecturer nor the students** want to reschedule the class. (*want* agrees with *students*)*

iii) *'There is'* and *'there are'* agree with the noun that follows.

There is flexibility in this kind of management structure.

There are many advantages to this kind of management structure.

iv) Indefinite pronouns (someone, anyone, no one, anybody, somebody, nobody, one, either, neither) usually take a singular verb.

No one likes to fail at university.

v) When a phrase comes between the subject and the verb, remember that the verb still agrees with the subject, not the noun or pronoun in the phrase following the subject of the sentence.

Examples:

The student, as well as the committee members, **is** excited.

The student with all the master's degrees **is** very motivated.

Strategies that the teacher uses to encourage classroom participation **include** using small groups and clarifying expectations.

The focus of the interviews **was** nine purposively selected participants.

vi) When a compound subject contains both a singular and a plural noun or pronoun joined by "or" or "nor," the verb should agree with the part of the subject that is closest to the verb. This is also called the rule of proximity.

Examples:

The student *or* the committee members **write** every day.

The committee members *or* the student **writes** every day.

- vii) The words and phrases "each," "each one," "either," "neither," "everyone," "everybody," "anyone," "anybody," "nobody," "somebody," "someone," and "no one" are singular and require a singular verb.

Examples:

Each of the participants **was** willing to be recorded.

Neither alternative hypothesis was accepted.

I will offer a \$5 gift card to **everybody** who **participates** in the study.

No one **was** available to meet with me at the preferred times.

- viii) Some countable nouns in English such as *earnings*, *goods*, *odds*, *surroundings*, *proceeds*, *contents*, and *valuables* only have a plural form and take a plural verb.

Examples:

The earnings for this quarter **exceed** expectations.

The proceeds from the sale **go** to support the homeless population in the city.

Locally produced goods **have** the advantage of shorter supply chains.

- ix) Collective nouns are words that imply more than one person but are considered singular and take a singular verb. Some examples are "group," "team," "committee," "family," and "class."

Examples:

The group **meets** every week.

The committee **agrees** on the quality of the writing.

However, the plural verb is used if the focus is on the individuals in the group. This is much less common.

Example:

The committee **participate** in various volunteer activities in their private lives.

- x) If two subjects are joined by ‘as well as,’ ‘with,’ ‘along with,’ ‘together with,’ ‘and not,’ ‘in addition to,’ ‘but,’ ‘except,’ ‘rather than,’ ‘accompanied by,’ ‘like,’ ‘unlike,’ ‘apart from,’ and ‘nothing but,’ the verb will agree with the first subject. For example,

Ram, as well as his friends, is coming to the party.

The principal accompanied by the teachers has joined the picnic program.

My father, unlike my uncles, is very strict.

- xi) The following nouns are always in singular form and agree with the singular verb.

Clothing, scenery, furniture, gossip, information, issue, traffic, accommodation, luck, luggage, poetry, permission, offering, alphabet, brick, etc.

Example:

All the furniture is new.

- xii) The following nouns are always in plural form and agree with the plural verb.

Binoculars, trousers, spectacles, pants, shorts, scissors, tongs, pincers, billiards, cards, intestines, socks, thanks, assets, goods, remains, premises, forceps, pyjamas, jeans, etc.

Example:

My spectacles are broken.

But, a pair of spectacles is on the table.

- xiii) The following nouns are always in singular form but agree with plural verb.

Cattle, police, poultry, vermin, swine, public, gentry, and clergy.

For example:

The cattle are grazing in the field.

The police are coming to help the helpless.

- xiv) The following nouns can take both singular(unification) and plural verb (division) verb.

Army, committee, group, class, government, jury, etc.

Example:

The government is of one opinion.

The government are of different opinions.

- xv) With the following expressions the verb agrees with the noun after ‘of’.

A great deal of, a good deal of, lots of, most of, majority of, minority of, the rest of, piles of, heaves of, a quarter of, two thirds of, one-third of, two-fifths of, none of, half of, etc.

Example:

Two-thirds of the novel is about war.

xvi) Noun representing any specific quality, quantity or amount is taken as singular subject.

For example:

Ten kilometers is not long distance.

Hundred rupees is enough for today.

Exemplary Junction

- a. *He*, as well as I,running. (am, **is**)
- b. Neither the teacher *nor his student*.....hard. (work, works)
- c. Neither the teacher *nor his students*.....hard. (work, works)
- d. Many *a man*.....done it. (**has**, have)
- e. *The teacher and principal*.....helpful. (**is**, are)
- f. *The teacher and the principal*.....helpful. (is, **are**)
- g. *The number of* studentsplaying outside. (**is**, are)
- h. *A number of* studentsplaying outside. (is, **are**)
- i. *One of* the teachers.....good. (are, **is**)
- j. *More than one* student.....reading a book. (are, **is**)
- k. *More books* than one.....missing(**are**, is)
- l. The *police*.....coming.(is, **are**)
- m. *Neither of* the statements.....correct. (**is**, are)
- n. *Each of* them.....happy. (**is**, are)
- o. Many *a flower*.....born to blush unseen. (**is**, are)
- p. *Each* day and *each* nightits own pleasure. (**has**, have)
- q. *This news*.....correct. (**is**, are)
- r. Two thirds *of the novel*.....good. (**is**, are)
- s. Two thirds *of the novels*.....good. (**is**, are)
- t. *Letter* after *letter*.....been sent to her. (**has**, have)
- u. *All* but principal.....present yesterday. (was, **were**)
- v. *The orator and statesman*.....dead. (is, are)

- w. **One of** the boyspresent today. (**is**, are)
- x. **No one except** Ram and Sita.....me. (help, **helps**)
- y. **Not one** of them.....happy today. (**is**, are)
- z. More than one **of the teachers** at Thapathali Campushardworking. (**is**, **are**)
- aa. **Less than two** students.....good. (**is**, **are**)

❖ Preposition

A preposition is a word that shows the relationship between a noun (or pronoun) and other words in a sentence. Prepositions usually indicate location, direction, time, or the relationship between two things. Some common prepositions include "in," "on," "at," "by," "for," "with," and "to." For example, in the sentence "The book is on the table," the word "on" is a preposition that shows the relationship between the book and the table, indicating the book's location. Prepositions are essential for understanding the spatial and temporal relationships in a sentence.

Use of prepositions

- Use of 'in'

It is used for dresses. For example,

The woman dressed **in** a red sari is my aunty.

It is used for occupations. For examples,

His brother is **in** the army.

His dad is **in** the politics.

It is used before the following nouns as:

in hospitals, in prison, in the bathroom, in bed, in the mirror,

It is used for places important to the speaker. For examples,

It is dangerous **in** the forest at night.

Who is the girl **in** the photograph?

Look at yourself **in** the mirror.

It is used for conditions or state. For example,

His business is **in** a profit.

- Use of 'on'

It is used for activity. For example,

He is on a diet.

We are on a holiday

My father is on business.

This house is on rent.

It is used for membership. Example,

The man is on the committee.

It is used to express a basis /reason for doing something. For example,

He did that on purpose.

The colonel has retired on purpose.

Use of **‘at’**

It is used for manner. Example,

The students took the exam at a single sitting on Monday.

It is used for degree, value and cost. Example,

He is driving at full speed, tell him to slow down.

He is selling bananas at Rs.30 per kg.

Use of **‘by’**

It is used in the sense of ‘according to.’ Example,

It is 12 O’clock by my watch.

It is used for measurements. Example,

Temperature is measured by a thermometer.

Some confusing prepositions

‘Before’ and ‘within’

‘Before’ is used for point of time. ‘Within’ is used for point of time.

‘Till’ and ‘until’

‘Till’ is used for point of time. ‘Until’ is used when the time is no specified.

‘In’ and ‘into’

‘Into’ is used with verb of motion. ‘In’ is used with verb representing state.

‘Made from’ and ‘made of’

‘Made from’ is used transformation of one material into another, while ‘made of’ is used to show material or substances that form the essential composition of something.

For example,

Paper is made from wood pulp.

The table is made of wood.

‘Beside’ and ‘besides’

‘Beside’ means ‘next to.’ ‘Besides’ means ‘in addition to.’

Exemplary Junction

- i. He came to meet me.....morning. (**at**, in)
- ii. The man jumpedthe swimming pool(in, **into**)
- iii. The children are swimming.....the pool. (**in**, into)
- iv. He will return to Kathmandu.....two days (**in**, after)
- v. He returned to Kathmandu.....two days (in, **after**)
- vi. The tiger sprang.....the man.(on, **upon**)
- vii. The project will be over.....next Monday. (**before**, within)
- viii. The project will be over.....six days (before, **within**)
- ix. I bought two copiesa pen.(beside, **besides**)
- x. He is absentthe class. (in, **from**)

Voice

Voice refers to the unique style, tone, and perspective of a piece of writing. In communication, the choice between active and passive voice can affect the tone, emphasis, and clarity of the message. Active voice is generally more direct and engaging, while passive voice can be used to shift focus, highlight the recipient of an action, or sound more formal. Both have their uses depending on the context and intention of the communication.

a) In passive voice, sometimes preposition ‘to’ ‘with’ ‘in’ or ‘at’ is used in place of ‘by.’

- i) Use the preposition ‘at’ instead of ‘by’ for the sentences with (surprised, annoyed, shocked, alarmed, disappointed, displeased, stressed, astonished, laughed) as main verb. Example,
A: His bahaviour annoyed me
P: I was annoyed at his behavior.

- ii) Use the preposition 'to' instead of 'by' for the sentences with (married, know, obliged) as the main verbs. Example,
 A: Hari married Shreya
 P: Shreya was married to Hari
- iii) Use the preposition 'with' instead of 'by' for sentences with (pleased, disgusted, impressed, etc.) as the main verbs. Example,
 A: Her performance impressed us
 P: We were impressed with her performance.
- iv) Use the preposition 'in' instead of 'by' for the sentences with (interested, consisted, absorbed, contained, etc.) as the main verbs. Example,
 A: This topic might interest students
 P: Students might be interested in this topic.

b) Quasi passive voice

Structure:

Active: sub+v1/v5+adj.

Passive: Sub+ aux+ Adj.+ when+ it/they+aux+v3

Basically active voice with 'test' 'feel' 'read' 'smell' 'cost' and 'sound' take the help of 'when' in the passive. Examples:

A: The food tasted delicious.

P: The food was delicious when it was tasted.

A: Honey tastes sweet.

P: Honey was sweet when it was tasted.

c) Consider the following structure.

A: It is time+ to=v1+obj.

P: It is time+ for+ obj. + to+be+v3

Examples:

A: It is time to write a letter.

P: It is time for a letter to be written.

A: It is time to play music.

P: It is time for music to be played.

d) Miscellaneous Passive voice

A: I hope to win.

P: It is hoped that I shall win.

A: It is your duty to do this work.

P: You are supposed to do this work.

A: Your shoes need polishing.

P: Your shoes need to be polished.

A: Prepare yourself for the examination.

P: Be prepared for the examination.

Exemplary Junction

- i) The passive voice of “who did it” is.....(Who is it done by?, **By whom was it done?**)
- ii) The passive voice of “He let him do it” is.....(He is let to do it, **He was allowed to do it**)
- iii) The passive voice of “All know Kalidash” is.....(Kalidash is known by all, **Kalidash is known to all**).
- iv) The passive voice of “Nobody told me the news” is.....(The news were not told to me, **I was not told the news**)
- v) The passive of “Let’s play cricket” is.....(Let the cricket be played, **It is suggested that we should play cricket**)

Conditionals

Conditionals describe the result of a certain condition. The ‘if clause’ tells you the condition (*If you study hard*) and the main clause tells you the result (*you will pass your exams*). The order of the clauses does not change the meaning. Example,

If you study hard, you will pass your exams.

You will pass your exams if you study hard.

Conditional sentences are often divided into different types.

Zero conditional

We use the zero conditional to talk about things that are generally true, especially for laws and rules.

If I drink too much coffee, I can't sleep at night.

Ice melts if you heat it.

When the sun goes down, it gets dark.

The structure is: *if/when* + present simple > present simple.

First conditional

We use the first conditional when we talk about future situations we believe are real or possible.

If it doesn't rain tomorrow, we'll go to the beach.

Arsenal will be top of the league if they win.

When I finish work, I'll call you.

In first conditional sentences, the structure is usually: *if/when* + present simple > *will* + infinitive.

It is also common to use this structure with *unless, as long as, as soon as, provided that* or *in case*, instead of 'if'.

I'll leave as soon as the babysitter arrives.

I don't want to stay in London unless I get a well-paid job.

I'll give you a key in case I'm not at home.

You can go to the party, as long as you're back by midnight.

Second conditional

The second conditional is used to imagine present or future situations that are impossible or unlikely in reality.

If we had a garden, we could have a cat.

If I won a lot of money, I'd buy a big house in the country.

I wouldn't worry if I were you.

The structure is usually: *if* + past simple > + *would* + infinitive.

Third Conditional

We use the third conditional to talk about impossible situations, as in the second conditional, in the past. We often use the third conditional to describe regrets. Examples,

If we had left earlier, we would have arrived on time.

If I hadn't learnt English, I wouldn't have got this job.

What would you have studied if you hadn't done engineering?

They wouldn't have hired you if you hadn't had some experience abroad.

Exemplary Junction

- i) Provided that she were good, she..... this position (had attained, **would attain**)
- ii) Be careful, or else you.....these plates. (drop, **will drop**)
- iii) Had I been there, Ievery part of the world.(had visited, **would have visited**)
- iv) Hefor a long drive today if the weather had been sunny. (would go, **would have gone**)
- v) Sheyou if she were here.(had told, **would tell**)
- vi) If she.....to come I would be delighted. (was, were)
- vii) If you hit the ball, it.....(**bounces**, will bounce)
- viii) I would fly in the sky if I.....a bird. (was, **were**)
- ix) He.....his flight unless he had been running fast. (would miss, **would have missed**)
- x) Find a seat quickly, or else there.....any left. (**will not be**, isn't)

MLA and APA Style of Citation (for BE)

MLA (Modern Language Association) Style (8th Ed.)

1. Book with one author

Book: Fifteen Dogs: An Apologue

Author: Alexis, Andre

Place of Publication: New York

Publisher: Coach House Books

Year of Publication: 2015

Citation:

Author (last name, first name). **Book**. **Publisher**, **date of publication**.

Alexis, Andre. *Fifteen Dogs: An Apologue*. Coach House Books, 2015.

i) **Author with first, middle and last name.**

Name: George Bernard Shaw

Write it as: Shaw, George Bernard. (last name, first name middle name)

Example:

Name of the author: George Bernard Shaw

Year of publication: 1976

Name of the book: Nature and People

Place of publication: London
Name of publication: Creation publications
Shaw, George Bernard. *Nature and People*. Creation Publications, 1976.

ii) Author with academic titles (Dr., Er., Ar., etc.)

Academic titles are not included in the citation. Example

Name of author: Dr. Ram Adhikari.

Citation: Adhikari, Ram.

iii) Author with suffix (Sr., Jr., IV)

Suffix is included in citation. For example,

Name of author: Ram Adhikari Jr.

Citation: Adhikari, Ram, Jr.

NOTE:

- **Italicize:** name of a book, journal, novel, newspaper.
- **Within inverted comma:** stories, articles, chapter of a book, poems.
- **When your citation runs to the second line, make it hanging.**
- **Place of publication is not included when citing the source according to MLA 8th edition.**

2. Book with Edition (3rd ed., 10th ed.)

Book: Fifteen Dogs: An Apologue

Author: Andre Alexis.

Place of Publication: New York

Edition: 4th edition

Publisher: Coach House Books

Year of Publication: 2015

Citation:

Author (last name, first name). **Book**. **Edition** (4th ed.), **Publisher**, **date of publication**.

Alexis, Andre. *Fifteen Dogs: An Apologue*. 4th ed., Coach House Books, 2015.

3. Book with two authors

Book: The Atmosphere: An Introduction to Reference Meteorology

Authors: Frederick Lutgens and Edward Tarbuck.

Publisher: Pearson

Year of publication: 2016

Place of publication: London

Citation:

First author (last name, first name), and **second author** (normal or first name last name). **Book.**
Publisher, year of publication.

Lutgens, Frederick, and Edward Tarbuck. *The Atmosphere: An Introduction to Reference Meteorology*. Pearson, 2016.

4. Book with three or more than three authors

First author (last name, first name, et al.)

Example:

Authors: Frederick Lutgens , Edward Tarbuck and XYZ Adhikari

Citation: Lutgens, Frederick, et al.

5. Book, chapters with author

Author: Brant, Beth.

Chapter: Coyote Learns a New Trick

Book: An Anthology of Canadian Native Literature Reference in English

Editor: Daniel David Moses and Terry Goldie

Publisher: Oxford UP

Year of publication: 1992

Page number: 148-150.

Citation:

Chapter author (last name, first name). “**chapter title.**” **Book, edited by** (name of editor/s-first name last name), **Publisher, year/date of publication, pp. x-y.**

Brant, Beth. “Coyote Learns a New Trick.” *An Anthology of Canadian Native Literature Reference in English*, edited by Daniel David Moses and Terry Goldie, Oxford UP,1992, pp.148-150.

6. Newspaper Articles

Example:

a) Name of the author: Harris, Rob.

b) Title of the article: Clinton on Climate Change.

c) Name of the newspaper: The New York Times

d) Date: 17 May 2007

e) Page number: 20

Citation:

Author (last name, first name). “**article.**” **Newspaper, complete date, page number** (p. x).

Harris, Rob. “Clinton on Climate Change.” *The New York Times*, 17 May 2007, p.20

• **If an article runs to multiple pages, for example 20-23, then (pp. x-y)**

Harris, Rob. “Clinton on Climate Change.” *The New York Times*, 17 May 2007, pp.20-23.

7. Journal Articles

Example:

- a) Name of the author: Conatser, Phillip, and Martin Block.
- b) Title of the article: Aquatic Instructors' Beliefs toward Inclusion.
- c) Name of the Journal: Therapeutic Recreation Journal
- d) Year: 2001
- e) Page number: 170-184
- f) Volume: 35
- g) Issue: 2

Citation:

Author (last name, first name (of first), and **first name second name** (of second writer)).
“Article.” *Name of a Journal*, vol. x, no. x, date, page number (pp. x-y).

Conatser, Phillip, and Martin Block. “Aquatic Instructors' Beliefs toward Inclusion.”
Therapeutic Recreation Journal, vol.35, no. 2, 2001, pp. 170-184.

APA (American Psychological Association) style of referencing

1. Book with one author

Book: Fifteen Dogs: An Apologue

Author: Andre Alexis.

Place of Publication: New York

Publisher: Coach House Books

Year of Publication: 2015

Citation:

Author (last name, first name initial.) (**year of publication**). **Book**. **Publisher**.

Alexis, A. (2015). *Fifteen dogs: An apologue*. Coach House Books.

- i) **Author with first, middle and last name**. For example, George Bernard Shaw

Write it as: Shaw, J. B. (2015) (last name, first name middle name initials)

- ii) **Author with academic titles (Dr., Er., Ar., etc.)**

Academic titles are not included in the citation. Example

Name of author: Dr. Ram Adhikari.

Citation: Adhikari, R.(year).

- iii) **Author with suffix (Sr., Jr., IV)**

Suffix is included in citation. For example,

Name of author: Ram Adhikari Jr.

Citation: Adhikari, R., Jr.(year).

NOTE:

- **Italicize:** name of a book, journal, novel, newspaper.
- **Write in normal:** stories, articles, chapter of a book, poems.
- **When your citation runs to second line, make it hanging.**
- **Place of publication is not required when using APA 7th edition.**
- **Capitalize only the first letter of the first word in the title and the first letter of the first word after colon in the title (book and article), but this rule does not apply with Journal and Newspaper. First letter of the proper noun is always capitalized no matter where it falls in the title.**

2. Book with edition (3rd ed., 6th ed., 10thed)

Book: Fifteen Dogs: An Apologue

Author: Andre Alexis.

Place of Publication: New York

Edition: 10th edition

Publisher: Coach House Books

Year of Publication: 2015

Citation:

Author (last name, first name initial.) **(year of publication).** **Book (edition).** **Publisher.**

Alexis, A. (2015). *Fifteen dogs: An apologue* (10th ed.). Coach House Books.

3. Book with two authors

Book: The Atmosphere: An Introduction to Reference Meteorology

Authors: Frederick Lutgens and Edward Tarbuck.

Publisher: Pearson

Year of publication: 2016

Place of Publication: New York

Citation:

First author (last name, first name initial), and **second author** (last name, first name initial.)
(year of publication). **Book.** **Publisher.**

Lutgens, F., and Tarbuck, E. (2016). *The atmosphere: An introduction to reference meteorology*. Pearson.

4. Book with three to twenty authors

Example:

Authors: Frederick Lutgens, Edward Tarbuck, XYZ Adhikari, XYZ Shrestha, XYZ Subedi, ABC Shrestha, XYZ Khan

Citation:

Lutgens, F., Tarbuck, E., Adhikari, X., Shrestha, X., Subedi, X., Shrestha, A., and Khan, X. (year).

5. Book, chapters with author

Author: Brant, Beth.

Chapter: Coyote Learns a New Trick

Book: An Anthology of Canadian Native Literature Reference in English

Editor: Daniel David Moses and Terry Goldie

Publisher: Oxford UP

Year of publication: 1992

Page number: 148-150.

Place of publication: UK

Citation:

Chapter author (last name, first name initial.) **(year of publication)**. **Chapter title**. In editor's **(first initial last (Ed.), Book (pp. x-y). Publisher.**

Brath, B. (1992). Coyote learns a new trick. In D. D. Moses and T. Goldie (Ed.), *An anthology of Canadian Native literature reference in English* (pp.148-150). Oxford University Press.

6. Newspaper Articles

i) Example:

a) Name of the author: Harris, Rob.

b) Title of the article: Clinton on Climate Change.

c) Name of the newspaper: *The New York Times*

d) Date: 17 May 2007

e) Page number: 20-24

Citation:

Author (last name, first name initial.) **(complete date)**. **Article (normal)**. **Newspaper**, p. x **(page number if one page) or pp. x-y (if article runs to two or more pages).**

Harris, R. (17 May 2007). Clinton on climate change. *The New York Times*, pp. 20-24.

7. Journal Articles

Example:

a) Name of the author: Conatser, Phillip

b) Title of the article: Aquatic Instructors' Beliefs Toward Inclusion.

c) Name of the Journal: *Therapeutic Recreation Journal*

d) Year: 2001

e) Page number: 170-184

- f) Volume: 35
g) Issue: 2

Citation:

Author (last name, first name initial.) **(year of publication). Article (normal). Journal, vol. (no.), page number (x-y).**

Conaster, P. (2001). Aquatic instructors' beliefs toward inclusion. *Therapeutic Recreation Journal*, 35(2), 170-184.

Citing Book with editor(s) or compiler(s) without Author

MLA

If you are **dealing with editor(s) or compiler(s), instead of author(s)**, insert the editor's name in the place where the author's name is otherwise, followed by a comma and the word **'editor'** for one and **'editors'** for two without the quotation marks. The rest of the format remains the same.

Examples:

Fine, Albert Hangman, editor. *Handbook on Animal-Assisted Therapy: Foundations and Guidelines for Animal-Assisted Interventions*. 4th ed., Academic Press, 2015

Miller, John, and Tim Smith, editors. *Cape Cod Stories: Tales from Cape Cod, Nantucket, and Martha's Vineyard*. Chronicle Books, 1996.

Note: For a book with three or more than three editors, follow name conventions for a Book with Three or more than three Authors

APA

Book with Editor(s), but no Author(s)

If there is an editor instead of an author, insert the editor's name in the place of the author's, followed by (Ed.) for one or (Eds.) for more than one editor.

I) For one editor

Editor's Last Name, First name Initial. Second name Initial if Given. (Ed.). (Year of Publication). *Title of book: Subtitle if given*. Publisher.

Examples:

Leitch, M. G. (Ed.). (2019). *A new companion to Malory*. D. S. Brewer.

Smith, J. A. (Ed.). (2008). *Qualitative psychology: A practical guide to research methods*. Sage.

II) For two or more than two editors

- *For two editors*

Stockert, P. A., and Taylor, C. (Eds.). (2014). *Canadian fundamentals of nursing*. Elsevier.

- *For more than two editors*

Stockert, P. A., Taylor, C., Perry, A.G., Ross, J.C., and Wood, M.J. (Eds.). (2014). *Canadian fundamentals of nursing*. Elsevier.

Note: For a book with three or more than three editors, follow name conventions for a Book with Three to Twenty Authors

In-text citation

In-text citations are inserted in the body of our research paper to briefly document the source of our information. Brief in-text citations point the reader to more complete information in the reference list at the end of the paper.

MLA (Modern Language Association)

There are two types of in-text citations: parenthetical and narrative. The typical parenthetical in-text citation usually contains the author's last name and a page number at the end of the sentence/paragraph. In a narrative citation, the authors are part of the sentence—we refer to them by their surname. Examples,

- **One author**

- i) **Quoting directly**

When a work has one author, list the author's last name and then the page number where the information is listed. Examples,

“.....idea as it is.....” (Shuttleworth 149). **(Parenthetical citation)**

Shuttleworth states that "the connection between the rhetoric of unveiling the truth and an overt political movement of insurrection is painfully evident" (149). **(Narrative citation)**

- ii) **Paraphrasing**

.....paraphrase..... (Shuttleworth 149). **(Parenthetical citation)**

Shuttleworth states that the relation between the act of unearthing the reality and an overt political movement is evident" (149). **(Narrative citation)**

- **Two authors**

If an entry in the works cited list has a work with two authors, include both names in the in-text citations. Use the word "and" between the two names. Examples,

“.....” (Tidwell and Ragar 58) **(Parenthetical citation)**

Tidwell and Ragar explain that "Hughes certainly was incapable of supporting them financially" (58). **(Narrative citation)**

- **Three or more authors**

If a work has three or more authors, the in-text citation will include the first author's name followed by "et al" which will match the entry in the works cited list.

“.....”(Grabher et al. 185) **(Parenthetical citation)**

Grabher et al. suggest that “teachers' efforts at organizing the canon of Emily Dickinson's work for classroom instruction are revealing” (185). **(Narrative citation)**

APA (American Psychological Association)

There are two types of in-text citations: parenthetical and narrative. In **parenthetical citations**, the authors are not mentioned in the sentence/paragraph, just the content of their work is mentioned. The author's surname, year, and page number with ‘p.’ (page number only in case of direct quotation) are placed in the brackets (parentheses) with commas in between them. For example,

“Gamification involves giving the mechanics or principles of a game to another activity” (Becker, 2013, p.29). **(Parenthetical citation)**

In **narrative citations**, the authors are part of the sentence – we refer to them by surname and year is mentioned within brackets just after the surname. For example,

Becker (2013) opines that “gamification involves giving the mechanics of principles of a game to other activities (p.29). **(Narrative citation)**

Additional examples,

It is stated that “mother–infant attachment has been a leading topic of developmental research since John Bowlby found that "children raised in institutions were deficient in emotional and personality development" (Hunt, 2011, p. 358). **(Parenthetical citation)**

Hunt (2011) explains that “mother–infant attachment has been a leading topic of developmental research since John Bowlby found that “children raised in institutions were deficient in emotional and personality development” (p. 358). **(Narrative citation)**

One author

i) Direct quotation

The author stated that “the mice disappeared within minutes” (Smith, 2020, p. 29).

Or

“.....the idea as it is.....” (Smith, 2020, p. 29). **(Parenthetical citation)**

Smith (2020) found that “the mice disappeared within minutes” (p. 29). **(Narrative citation)**

ii) Paraphrasing

It is stated that the mice hid quickly (Smith, 2020).

Or

.....paraphrase.....(Smith, 2020). **(Parenthetical citation)**

Smith (2020) found that the mice hid quickly. **(Narrative citation)**

Two authors

It is stated that “the mice disappeared within minutes” (Jones & Smith, 2020, p. 29).

Jones and Smith (2020) found that “the mice disappeared within minutes” (p. 29).

Three or more authors, use the first author and “et al.” for all in–text citations.

Authors found that “the intervention was not based on evidence from clinical trials” (Green et al., 2019, p.20).

Green et al. (2019) found that “the intervention was not based on evidence from clinical trials” (p.20)

Writing Notice and Minutes (for BE)

A notice is a written communication, typically formal in nature, which conveys information, instructions, warnings, or announcements to individuals or a broader audience. Notices are often used to inform people about upcoming events, changes in policies, legal matters, or any other important details that require their attention or action. They can be posted in public spaces, distributed electronically, or sent through mail to ensure that the intended recipients are made aware of the information being conveyed. Notices serve as a means of disseminating information efficiently and transparently to ensure that people are informed and able to respond appropriately.

Writing a Notice to Call for the Meeting

In order to call a meeting, a notice is circulated to all the individual members of the organization or the concerned. A formal notice contains the following information:

- The name and address of the organization/committee/club
- The date on which notice is issued
- Title, i.e. NOTICE
- The day/date and time of the meeting
- The venue of the meeting
- The agenda to be discussed (optional)
- Signature and name of the secretary

Exemplary Junction

Inventing necessary details, write a notice with four points agenda for the upcoming third regular monthly meeting of your organization.

Himalaya College of Engineering

Chyasal, Lalitpur

Phone no:

15 September 2023

NOTICE

It is to inform all the faculty members of the college to attend the third regular monthly meeting to be held on September 18 at 10 AM sharp in the seminar hall of college to discuss and decide on the following agenda:

- 3.01: Minutes of the previous meeting
- 3.02: Extra/remedial classes
- 3.03: Purchase of computers and CCTVs
- 3.04: Appointment of teachers
- 3.05: Internal examination of BCA I/II and II/II
- 3.06: Schedule for the next meeting

.....

Ram Chaudhary

Secretary

Writing Minutes of the Meeting

Minutes are the official records of discussions held and decisions made in the meeting. Minutes include the following information:

- Title, i.e. MINUTES
- Time, date and place of the meeting
- The chairmanship of the meeting
- List of people attending the meeting
- List of absent members of the group
- Decisions made on each agenda
- Time, date and place of the next meeting
- Sign of the secretary and Chairman

Exemplary Junction

Question:

Suppose you are the secretary of any organization and its third regular monthly meeting has been held recently. Write minutes of the meeting inventing at least four most relevant agenda.

MINUTES

The third regular monthly meeting of the faculty members of Himalaya College of Engineering was held on September 18, from 10 AM to 2 PM, in the seminar hall of the college under the chairmanship of Dr. Mohan Shrestha. The meeting discussed and decided on some agenda in the presence of the following members:

Present Members:

SN	Name	Post	Signature
1	Dr. Mohan Shrestha	Campus Chief	
2	Mr. Hari Khadka	Senior Lecturer	
3	Mr. Tank Bhattra	Lecturer	
4	Mrs. Sita Gurung	Lecturer	
5	Mr. Ram Khatiwada	Lecturer	
6	Mis. Bimala Limbu	Lecturer	
7	Mr. Rahul Bhatta	Lecturer	

Absentees:

SN	Name	Post
1	Mr. Sagun Kafle	Lecturer
2	Mr. Rohit Maharjan	Lecturer

Discussions held and decisions made:

3.01: Confirmation of the minutes of the second meeting

All the members went through the minutes of the second regular meeting and they were approved without further discussion.

3.02: Conduction of remedial classes

The meeting decided to conduct extra/remedial classes for the needy students from 3 PM to 5 PM, starting on September 25.

3.03: Purchase of computers and CCTVs

The faculty members decided to purchase fifty computers and ten CCTVs as the college does not have enough computers and the CCTVs installed in some classrooms do not work.

3.04: Appointment of teachers

The meeting decided to hire the required number of teachers on a contract basis to take remedial classes.

3.05: Conduction of internal examination

The meeting scheduled the date for the internal examination of BCA I/II and II/II from September 26 to 28. It has also been decided that the exam will be conducted online.

3.06: Schedule for the fourth meeting

The fourth meeting is scheduled to be held on October 20 at 10AM sharp in the seminar hall of the college.

As there was no need for further discussion on the topics, the meeting ended with a vote of thanks.

Writing Reports (for BE and B Arch.)

A professional report is a tool of communication extensively employed across various sectors, including government entities, business industries, corporations, and diverse organizations. It plays a pivotal role in fields such as science, engineering, medicine, and business. This instrumental document serves as a means to present comprehensive and authoritative information to a well-defined audience, with the primary objective of fulfilling a specific purpose. Importantly, a professional report embodies a sense of impartiality and objectivity in its content, ensuring the integrity of the information shared.

At its core, a professional report encompasses an array of formats tailored to distinct contexts and requirements. These formats encompass progress reports, trip reports, project completion reports, event/program reports, investigation reports, evaluation reports, feasibility studies, and research reports. Each of these report types serves to address specific needs and objectives within their respective domains.

Crucially, the purpose of a report is rooted in the identification of a pertinent issue or challenge that necessitates attention. The report, in turn, becomes a vehicle through which this issue is analyzed, discussed, and ultimately addressed. It serves as a repository of insights, data, and findings that culminate in well-informed recommendations, where applicable.

Reports can vary in their formal or informal nature, contingent upon factors such as the scope of the subject matter, the intended audience, and the length of the document. This flexibility allows reports to be tailored to suit the specific context in which they are utilized.

In essence, a professional report stands as a cornerstone of effective communication and informed decision-making across a multitude of professional landscapes. Its ability to distill complex information into a coherent and actionable format makes it an indispensable tool of communication in the modern world.

Informal Reports

An informal report is a brief account of a specific business or professional activity. This type of report is often written to provide introductory information about a routine affair. Informal reports are generally short. They may be either informative or analytical and may use either oral or written form. Since informal reports are not elaborate, they may contain only a few elements, such as note on authorization, methods, findings, conclusions and recommendation. These reports are in two forms:

- a) Letter report
- b) Memo report

Letter Report.

The letter report follows the format of business letter. A letter format contains all the elements of a letter along with some additional sections. A letter report contains the following parts:

- i) Letterhead
- ii) Date
- iii) Superscription (full address of the receiver)
- iv) Subject line
- v) Salutation
- vi) Body
 - Introduction: provide background to the report, state purpose(s) and introduce method of data collection
 - Discussion/Findings: measures to be taken to solve the existing problems or improve the current situation
 - Conclusion: quick synopsis of findings and expected action
- vii) The ending
- viii) The subscription or complementary close
- ix) Signature, name and the post
- x) Enclosure

Question.

As an Administrative Officer of Himalaya College of Engineering located in Lalitpur, Nepal, prepare a report in a letter format addressing the concern raised by the Academic Director regarding the poor participation of students in recent "Himalaya Exhibition 2023."

Himalaya College of Engineering

Chyasal, Lalitpur

Date: 15 September 2023

To: Mr. Purna Bhadra Aryal

Academic Director

Subject: Report on Students' Poor Participation in "Himalaya Exhibition 2023"

Dear Sir,

This is the report on "Students' Poor Participation in 'Himalaya Exhibition 2023'" in response to your request made on 10th September 2023.

INTRODUCTION

The report addresses the causes behind lack of students' engagement in the "Himalaya Exhibition 2023," and strategic measures to be undertaken for enhancing their participation in such events in the future. To this end, the report collected relevant data by conducting interviews with a cross-section of 100 students and 20 faculty members.

FINDINGS

Following comprehensive discussions with 100 students and 20 faculty members, the following key factors contributing to the inadequate student participation in the exhibition were identified:

- i) **Insufficient Advertising:** Approximately 45% of the students noted that the lack of robust advertising and relatively modest prize incentives for the events hindered their motivation to participate.
- ii) **Faculty Engagement:** A significant 70% of the faculty expressed challenges in dedicating time to guide students in projects due to excessive administrative responsibilities. This dearth of mentorship negatively impacted student involvement in academic activities.
- iii) **Timing Constraints:** Both students (55%) and faculty (30%) acknowledged that inconvenient scheduling was a deterrent to active participation.

CONCLUSION

There are some critical factors behind inadequate student participation in the Himalaya Exhibition 2023. They include insufficient promotion, limited faculty engagement, and timing constraints. By tackling these issues, the college can create an engaging environment to foster active student involvement in such events.

RECOMMENDATIONS

In light of the findings, following recommendations are proposed to improve students' participation in various events organized by the college.

1. Enhanced Promotion: The College should ensure widespread dissemination of notices pertaining to academic activities, fostering better awareness among all the students.
2. Optimized Workload Distribution: Administrative tasks should be distributed equitably across faculty members, preventing an undue burden on some members only. This would afford faculty more time to engage in academic initiatives and provide proper guidance to students' projects.

Your attention to these recommendations will aid in revitalizing student engagement and enriching the academic environment of the college.

Thanking You.

Best Regards,

.....

ChiranjibiDevkota

Administrative Officer

Memo Report

A memo report, also known as the memorandum report or memo-style report, is a concise and well-structured document that presents information, analysis, or recommendations on a specific topic. Memos are typically used for internal communication within an organization. Memos are designed to provide essential details and insights in a clear and straightforward manner. A memo report contains the following parts:

- i) Letterhead
- ii) To: name, position
- iii) From: name, position
- iv) Date
- v) Subject line

vi) Body

- Introduction
 - context of the report
 - why you are writing the report (purpose)
- Method
- Findings
- Conclusion
- Recommendations

The main body of the memo report includes headings appropriate to the discussed matter. It basically includes findings and recommendation.

vii) signature of the person writing the report(optional)

MEMORANDUM

From: Saurav Pandit, Administrative Officer

To: Ajay Ojha, Academic Director

Date: 15 September 2023

Subject: Report on Students' Poor Participation in "Himalaya Exhibition 2023"

INTRODUCTION

With reference to your request dated 11 September 2023, through memo no. RN 2234, I am pleased to submit a report addressing the causes behind lack of students' engagement in the "Himalaya Exhibition 2023," and strategic measures to be undertaken for enhancing their participation in such events in the future.

PROCEDURE

Conducted interviews with a cross-section of 100 students and 20 faculty members.

FINDINGS

Following comprehensive discussions with 100 students and 20 faculty members, the following key factors contributing to the inadequate student participation in the exhibition were identified:

- iv) **Insufficient Promotion:** Approximately 45% of the students noted that the lack of robust advertising and relatively modest prize incentives for the events hindered their motivation to participate.
- v) **Faculty Engagement:** A significant 70% of the faculty expressed challenges in dedicating time to guide students in projects due to excessive administrative responsibilities. This dearth of mentorship negatively impacted student involvement in academic activities.
- vi) **Timing Constraints:** Both students (55%) and faculty (30%) acknowledged that inconvenient scheduling was a deterrent to active participation.

CONCLUSION/RECOMMENDATION

There are some critical factors behind inadequate student participation in the Himalaya Exhibition 2023. They include insufficient promotion, limited faculty engagement, and timing constraints. To create engaging environment to foster active student involvement in such events, the college should ensure widespread dissemination of notices pertaining to academic activities, fostering better awareness among all the students. Moreover, administrative tasks should be distributed equitably across faculty members, preventing an undue burden on some members only. This would afford faculty more time to engage in academic initiatives and provide proper guidance to students' projects.

Best Regards,

.....

Formal Reports

Research Report

A research report is a formal and structured document that presents the results, analysis, and findings of a research study or investigation. It is a detailed account of the research process, methods used, data collected, and the conclusions drawn from the study. It also includes recommendations when deemed necessary. Research reports are typically written by researchers, scholars, or professionals in various fields to share their research findings with a wider audience, such as peers, colleagues, or the general public.

Key Elements of a Research Report

The structure of a report depends on its type. A well-structured research report typically consists of the following key elements, each contributing to the clarity, comprehensiveness, and validity of the information presented:

1. **Cover Page:** The cover page of a research report typically includes essential information about the report's title, authors, affiliations, and other relevant details. It is the first page of the document and serves as a visual introduction to the research. The design and formatting of the cover page may vary depending on the specific style guide or requirements of the institution or publication. It is important to follow any guidelines provided by your institution, publisher, or the specific style guide (such as APA, MLA, Chicago, etc.) that you are using for your research report.
2. **Title Page:** The title page includes the title of the research report, the author(s) names and affiliations, date of publication, and often the name of the institution or organization associated with the research.

3. **Letter of transmittal:** The letter of transmittal as its name suggests is a letter that transmits the report to the reader. This includes statement of transmittal, background to the report/what the report focuses on and acknowledgements in brief.
4. **Preface:** Preface is one of the important elements of a formal report. It includes the following information:
 - Background to the report
 - The necessity of the report-why the report is prepared
 - Description of the work
 - Implications
 - Acknowledgements
5. **Acknowledgments:** A section where the authors express gratitude to individuals or organizations that provided support, funding, or assistance during the research. Following is the list of frequently used expressions to convey our appreciation for the help, assistance, and guidance extended by others:
 - I am grateful to.....
 - I am indebted to.....
 - We are profoundly grateful to...
 - We wish to express our heartfelt thanks to.....
 - I must express my gratitude to
 - I acknowledge my indebtedness to.....
 - I am highly thankful to.....
 - We are wholeheartedly thankful to...
 - I am particularly grateful to.....
 - I wish to record my appreciation to.....

The reasons for thanking the person or organization also should be stated like:

- I am grateful to XYZ Shrestha for his invaluable advisory insights
 - I must express my gratitude to Hari Maharjan for meticulously reviewing the initial draft of the report and offering insightful recommendations that greatly contributed to its completion.
 - I am indebted to the Ministry of Physical Infrastructure and Transport for their invaluable dedication of time and financial support, which played a pivotal role in the successful completion of this report.
6. **Abstract:** A concise summary of the research report, highlighting the context, objectives, scope, methods, key findings, conclusion and recommendation. It provides readers with a quick overview of the study's main points.
 7. **Table of Contents:** A list of all the major sections and subsections within the report, along with their corresponding page numbers. It is an optional element in the short

reports but it is an essential part in the long reports. This allows readers to navigate through the report easily.

8. **Introduction:** This section provides context for the research by discussing the background, problem statement, research objectives, scope and limitation, and significance of the study. It sets the stage for the rest of the report.
9. **Literature Review:** A comprehensive review of relevant literature and previous research related to the topic. This section demonstrates the researcher's understanding of the existing body of knowledge and helps to identify research gaps.
10. **Methodology:** A detailed explanation of the research design, data collection methods, sample selection, and instruments used. This section should enable other researchers to replicate the study.
11. **Results:** The presentation of the raw data collected during the research, often in the form of tables, charts, graphs, and descriptive text. This section should be objective and it should avoid interpretation.
12. **Discussion:** Interpretation and analysis of the results in the context of the research objectives. Researchers discuss the implications of their findings, compare them to existing literature, and explore potential limitations.
13. **Conclusion:** A summary of the key findings and their implications, restating the research objectives and indicating whether they were achieved. This section often suggests avenues for further research.
14. **Recommendations:** If applicable, suggestions for actions that could be taken based on the research findings. These may be directed toward policymakers, practitioners, or other relevant stakeholders.
15. **References:** A comprehensive list of all the sources cited within the report. This section allows readers to access the original works from where necessary information has been taken to make the research authentic and credible.
16. **Appendices:** Additional supplementary materials that support the content of the report, such as survey questionnaires, raw data, detailed methodology descriptions, or any other relevant documents.

By incorporating these elements into a research report, researchers can ensure that their work is well-organized, informative, and contributes meaningfully to the body of knowledge in their field.

Letter of Transmittal

15 September 2023

Er. Hari Adhikari
Chief Engineer
Ministry of Physical Infrastructure Development
Kathmandu, Nepal

Respected sir,

I hereby submit the report entitled “Causes of Increasing Road Accidents on the Highways in Nepal” in response to your request made on 1 September 2023.

With the increasing production of the automobile, the people buying personal vehicle are also increasing and with it the road accidents are increasing drastically. In the major cities like Pokhara, Kathmandu, Biratnagar etc., many small vehicles cause accident. However, on the highways outside the cities various accidents take place due to the heavy vehicle like overloaded trucks, buses and private cars. This report tries to find the reasons behind these accidents. Besides, it aims to highlight the role of the central and local governments to minimize the accidents on the highways in Nepal.

I would like to express my deep gratitude to my committee chair, Professor Samit Thapa for his guidance and suggestion throughout the journey. I also thankful to the members of police headquarter Naxal for their its kind support and time for interaction. I am grateful to them for all the data and information they provided. In addition, I would like to thank my friend Smarika for the fruitful discussions around the date. Moreover, I would like thank Thapathali Campus for giving me an opportunity and providing financial support to carry out this research.

Sincerely,

.....

Rahul Bhattraï
Engineer

Preface

Road accidents pose a significant challenge to public safety and well-being, with far-reaching impacts on individuals and communities. In Nepal, the escalating rate of road accidents on highways has raised serious concerns about the safety of road users and the need for effective interventions. This report, titled "Causes of Increasing Road Accidents on the Highways in Nepal," aims to delve into the root causes of these accidents, identify accident-prone areas, address broader road safety challenges, analyze different types of accidents, and propose strategies to minimize risks.

The study's primary objective is to shed light on the factors contributing to the rising incidence of road accidents on Nepalese highways and to offer actionable recommendations for improving road safety. By understanding these causes and their implications, policymakers, local authorities, and stakeholders can develop targeted measures to reduce accidents and enhance the overall safety of the road transportation system in Nepal.

The significance of this report lies in its potential to inform policy decisions, guide infrastructure development, and contribute to public health and economic well-being. It aims to serve as a valuable resource for policymakers, researchers, and practitioners working in the field of road safety, offering insights into the complex dynamics of road accidents in Nepal and proposing evidence-based strategies for improvement.

I would like to express my sincere gratitude to Professor Samit Thapa for his invaluable guidance and support throughout this research endeavor. I am also thankful to the members of the police headquarters in Naxal for their generous assistance and provision of essential data. Special thanks are due to my friend Smarika for her insightful discussions and to Thapathali Campus for their financial support, which made this study possible.

Sincerely,

Rahul Bhattra

Engineer

Acknowledgements

I would like to express my deep gratitude toward my committee chair, Professor Samit Thapa for meticulously reviewing the initial draft of the report and offering insightful recommendations that greatly contributed to its completion. Without his advice and support, this report could not be completed. I express my sincere thankful to the members of police headquarter in Naxal for their kind support in data collection and time for interaction. I am grateful to them for all the data and information they provided. I would like to thank my friend Smarika for the fruitful discussions around the date. I am highly indebted to Thapathali Campus for providing financial support which played a pivotal role in the successful completion of this report. I am grateful to everyone else who helped along the way.

Abstract

This study investigates the root causes of the increasing road accidents on highways in Nepal and proposes strategies to mitigate the risks and improve road safety. The research reveals that multiple factors contribute to the escalating accidents, including distracted driving, speeding, unsafe road environments, non-compliance with safety measures, and traffic rule violations. The study employs a mixed-method approach, combining quantitative analysis of road accident data with qualitative insights gathered through interviews with key stakeholders, including government officials, law enforcement agencies, road safety experts, and members of the local communities. Challenges in addressing these issues include the lack of a long-term roadway safety plan, political instability affecting funding, and data record negligence. Based on the findings, recommendations are proposed, such as promoting ignition interlock devices, imposing heavy penalties for speeding, strengthening driving tests, installing road dividers, enforcing traffic rules, and enhancing road signage. These recommendations aim to address specific causes identified and contribute to a comprehensive road safety strategy. The study concludes that urgent action is needed to improve road infrastructure, enforce regulations, and raise awareness to reduce the growing toll of road accidents in Nepal.

1. Introduction

1.1 Context/ Background of the Study

Road transportation is considered as the most reliable mode of transportation until we face the fact that road accidents are considered to be major causes of death, injury and disability in all over the world. In Nepal, road accidents have been on a sharp upward trajectory since the early 2000s.

According to the CBS report 2016, the total road network in Nepal covers 26900 kilometers, where as many as 1995400 vehicles ply along the road network. Most of the people in Nepal rely on road transportation. But nowadays, due to various factors road transportation is kind of a gateway to heaven for thousands of people and this rate is increasing enormously. In Nepal, long-term impacts of traffic injury are poorly documented and the impact assessment of the accidents is quite insufficient. Persons involved in road traffic incidents may develop psychological symptoms PTSD (posttraumatic stress disorder). This can lead to impairment in everyday life. The patient may perceive a subjective threat to life in the long term. Drivers also face many threats from physical assault to legal persecution when accidents occur.

There are a few roads in Nepal that are badly maintained with massive potholes and many are constructed round the terrain which includes winding roads, hairpin bends and steep recipes with no safety barriers. There are many challenges regarding road safety in Nepal. But every problem comes with solutions.

1.2 Statement of the Problem

The road transportation system in Nepal, while crucial for the country's connectivity and economy, is plagued by a significant rise in road accidents, leading to fatalities, injuries, and disabilities. Despite being a vital mode of transportation for the majority of the population, the

safety of road users has been compromised due to various factors contributing to the alarming increase in accidents. The lack of comprehensive data on the long-term impacts of traffic injuries, inadequate assessment of accident impacts, and the potential psychological trauma experienced by those involved in accidents further exacerbate the problem. Additionally, poorly maintained roads, including those with hazardous conditions such as potholes, winding routes, and steep inclines without safety barriers, pose significant risks to drivers and passengers. These challenges underscore the pressing need to address road safety issues in Nepal. Therefore, this research aims to identify the root causes of the escalating road accidents on highways in Nepal and develop a probabilistic model to assess accident reduction factors. It also seeks to pinpoint accident-prone areas, address road safety challenges, recognize the reasons for different types of accidents, and propose measures to mitigate these risks. Ultimately, the goal is to decrease the rate of road accidents and promote a safer road transportation system in Nepal.

1.3 Objectives of the Study

The primary objective of this report is to reduce the rate of road accidents on the highways of Nepal by achieving the following specific objectives:

- To explore the causes of increasing road accidents on the highways in Nepal.
- To identify and highlight accident-prone areas on the highways.
- To address the broader road safety challenges in Nepal.
- To analyze the reasons for different types of street mishaps on the highways.
- To raise awareness among residents about the effects of street mishaps and promote well-being measures.
- To propose effective strategies to minimize accidents on the highways in Nepal.

The research is guided by these objectives to understand the underlying causes of road accidents, identify high-risk areas, address broader road safety challenges, analyze specific reasons for mishaps, and propose actionable measures for improving road safety in Nepal.

1.4 Scope and Limitation of the Study

Scope of the Study.

This research focuses on the road transportation system in Nepal, with a specific emphasis on the country's highways, which are vital for connectivity and economic development. The study aims to comprehensively investigate the increasing rate of road accidents on these highways, including an analysis of the causes of accidents and the identification of accident-prone areas. Additionally, the research addresses broader road safety challenges in Nepal. It seeks to analyse the various reasons for different types of accidents, raise awareness about them, and propose strategies to minimize accidents, thus contributing to a safer road transportation system in the country.

Limitations of the Study:

Availability of Data: The study may encounter limitations due to the availability and quality of data related to road accidents, particularly concerning long-term impacts and psychological trauma experienced by individuals involved in accidents.

- i) **Geographic Focus:** While the research primarily focuses on the highways of Nepal, it may not encompass all aspects of road transportation in other regions or types of roads within the country.
- ii) **Resource Constraints:** The study may be constrained by resources such as time, funding, and access to specific data or locations, which could impact the depth and breadth of the research.
- iii) **Generalizability:** The findings and recommendations of the study may be specific to the context of Nepal and its road infrastructure, and they may not be directly applicable to other countries or regions with different road systems and cultural dynamics.

1.5 Significance of the Study

The study is significant due to its multifaceted effort on addressing the causes of increasing road accidents on the highways in Nepal and suggesting strategies to minimize them in the days to come. Thus, the study is important for the policy makers, local government and the central government. Broadly, the significance of the study can be presented as follows:

- i) **Public Health Impact:** Road accidents are a leading cause of death, injury, and disability. By identifying the causes behind the increasing rate of accidents on Nepalese highways, the study can contribute to reducing the loss of life and improving public health outcomes.
- ii) **Economic Implications:** Road accidents have significant economic costs, including healthcare expenses, loss of productivity, and damage to infrastructure. Understanding

the causes of accidents can help in devising cost-effective preventive measures, thus leading to potential economic savings.

- iii) **Infrastructure Development:** Highways are crucial for Nepal's connectivity and economic development. Addressing the causes of accidents can lead to improvements in highway infrastructure and safety features, benefiting transportation efficiency and reliability.
- iv) **Policy Relevance:** The study's findings can inform policy decisions related to road safety regulations, infrastructure development, and enforcement strategies. This can lead to the implementation of targeted measures to address specific causes of accidents on highways.
- v) **Research Contribution:** By focusing on the specific context of Nepalese highways, the study can contribute valuable insights to the broader field of road safety research. It can serve as a reference for similar studies in other regions facing similar challenges.
- vi) **Community Well-being:** Understanding the causes of accidents can help raise awareness among the public about the risks associated with certain behaviors or conditions on highways. This awareness can contribute to safer road usage and overall community well-being.

In summary, the study's significance lies in its potential to save lives, reduce economic burden, improve infrastructure, inform policies, advance research in road safety, and enhance the well-being of communities using highways in Nepal.

2. Methodology

To investigate the causes of the increasing road accidents on highways in Nepal and suggest the strategies to minimize them, a mixed-method approach was employed to ensure a comprehensive understanding of the issues. Both quantitative and qualitative analyses were conducted to gather and analyze data from diverse sources.

2.1 Quantitative Analysis:

Quantitative data related to road accidents, including factors such as location, time, weather conditions, types of vehicles involved, and severity of accidents, were collected from official records, police reports, and other relevant sources.

2.2 Qualitative Analysis:

In addition to quantitative data, qualitative insights were gathered through interviews with key stakeholders, including government officials, law enforcement agencies, road safety experts,

and members of the local communities. These interviews provided valuable qualitative data on factors such as road infrastructure, enforcement of traffic laws, driver behavior, and public awareness campaigns, which were analyzed to gain a deeper understanding of the underlying causes of the increase in road accidents.

2.3 Integrated Analysis.

The findings from both the quantitative and qualitative analyses were integrated to develop a comprehensive understanding of the multifaceted nature of the problem. This integrated approach allowed for the identification of specific factors contributing to the increasing road accidents on highways in Nepal, providing a solid foundation for developing targeted interventions and strategies to address the issue.

3. Literature Review

Road traffic accidents (RTAs) represent a significant public health concern in Nepal, with substantial human and economic costs. In the fiscal year 2017–18, the country officially reported 2,541 road deaths, translating to a fatality rate of 8.59 per 100,000 populations (Government of Nepal, 2018). However, contrasting with this official figure, the World Health Organization (WHO) estimated a higher fatality rate of 15.9 per 100,000 populations in 2016, nearly double the official estimate (World Health Organization, 2016).

Vulnerable road users, including pedestrians, cyclists, and motorcyclists, accounted for approximately 72% of all road fatality victims in Nepal in 2016, with pedestrians comprising half of this figure (World Health Organization, 2016). Notably, road accidents disproportionately impact the young working-age population, as approximately 40% of those killed on Nepal's roads in 2017–18 were under 26 years old (Government of Nepal, 2018). This trend is consistent with data showing transport injuries as the second leading cause of death among men aged 15–49 years in 2016 (World Health Organization, 2016).

Geographically, Nepal's casualty rate per accident increases as one moves westward, with the far-western region reporting nine deaths per ten accidents (Government of Nepal, 2018).

Additionally, statistics from the Metropolitan Traffic Police Division indicate an upward trend in road accident fatalities, with 166 deaths in fiscal year 2015–16, 182 deaths in 2016–17, and 149 deaths in 2017–18 (Metropolitan Traffic Police Division, 2018). Furthermore, the age profile of individuals involved in road fatalities highlights the vulnerability of those aged 17 to 35 years (Metropolitan Traffic Police Division, 2018).

Driver-related errors account for a significant portion of fatal road crashes in Nepal, contributing to over 60% of such incidents (Government of Nepal, 2018). These errors encompass various factors, including traffic law violations, drink-driving, overloading, and speeding (Government of Nepal, 2018).

In summary, the literature indicates that road accidents in Nepal pose a considerable threat to public health and safety, particularly affecting vulnerable road users and the young population. Understanding the causes and patterns of road accidents is crucial for developing effective interventions to mitigate this growing problem.

4. Findings and Discussion

4.1 Overview of Road Accidents in Highways of Nepal.

The study investigated the causes of increasing road accidents on the highways of Nepal. It was found that accidents occur under various circumstances, with multiple factors contributing to their occurrence. The major causes identified include negligence of drivers, speeding, drunk-driving, mechanical glitches, haphazard overtaking, negligence of pedestrians, poor and congested roads, weather conditions, and stray animals. Additionally, the absence of engineering standards for roads was found to play a significant role in these accidents.

4.2 Causes of Increasing Road Accidents.

The findings of this report shed light on the complex and multifaceted nature of road accidents on the highways of Nepal. Several key factors contribute to the increasing rate of accidents, each presenting unique challenges to road safety efforts in the country.

- i) **Negligence of Drivers.** Driver-related errors, such as traffic law violations, drink-driving, overloading, and speeding, account for a significant portion of fatal road crashes in Nepal. This highlights the need for stricter enforcement of traffic laws and initiatives to promote responsible driving behavior among motorists.
- ii) **Speeding.** The high incidence of speeding as a cause of accidents underscores the importance of speed management measures, including the implementation of speed limits, speed enforcement mechanisms, and public awareness campaigns highlighting the dangers of excessive speed.
- iii) **Unsafe Road Environments.** Factors such as poor road conditions, inadequate safety facilities, visibility impairment due to darkness, and pedestrian negligence contribute to accidents. Improving road infrastructure, enhancing visibility, and promoting pedestrian safety measures are critical to addressing these challenges.

- iv) **Lack of Seat Belts and Helmets.** The non-use of seat belts and helmets by drivers and passengers is a major concern. Efforts to promote the use of safety equipment and enforce regulations regarding their usage can significantly reduce the severity of injuries in accidents.
- v) **Traffic Rule Violations.** Disobeying traffic rules and improper overtaking were identified as root causes of road accidents. Strengthening traffic enforcement measures and promoting adherence to traffic regulations are essential for improving road safety.

4.3 Challenges in Addressing the Problem.

Followings are the challenges faced by the concerned in addressing the increasing accidents on the highways of Nepal.

- i) **Lack of Long-Term Roadway Safety Plan.** The absence of a comprehensive long-term roadway safety plan with measurable targets is a significant impediment to effective road safety management. Developing such a plan, with a focus on preventive measures and sustainable interventions, is crucial for reducing the incidence of accidents.
- ii) **Political Instability and Funding.** Political instability and insufficient funds pose challenges to the implementation of effective road safety measures. Stable governance and adequate financial resources are essential for sustaining road safety initiatives and infrastructure development.
- iii) **Data Record Negligence.** Negligence in maintaining accurate data records hinders the formulation of evidence-based policies and interventions. Improving data collection and management systems is essential for informed decision-making and monitoring of road safety initiatives.

5. Conclusion

Road transport is a vital aspect of Nepal's infrastructure despite the challenges posed by the poor condition of roads. The country's road network is extensive, accommodating a large number of vehicles. However, this accessibility comes at a high cost, with hundreds of lives lost annually in road traffic accidents. The impact of these accidents extends beyond fatalities, often resulting in severe injuries and long-term consequences for the victims and their families. The rate of road accidents and fatalities in Nepal is on the rise, driven by factors such as the deteriorating quality of roads and the increasing number of vehicles on the roads. This trend

underscores the urgent need for comprehensive measures to improve road safety across the country.

In conclusion, the escalating number of casualties due to road accidents highlights the critical need for action. Efforts to maintain road quality and ensure compliance with traffic rules and regulations are essential. Effective coordination among government bodies, vehicle owners, and civil society is necessary to enforce these regulations. Additionally, the government should prioritize infrastructure development to enhance road quality. Furthermore, integrating traffic education into the school curriculum can instill a culture of adherence to traffic rules among young people, contributing to a safer road environment for all.

6. Recommendations

Based on the findings of this study, the following recommendations are proposed to address the increasing road accidents on the highways of Nepal. Each recommendation is designed to target specific issues highlighted in the findings and is intended to contribute to a comprehensive approach to road safety management.

- i) **Promotion of Ignition Interlock Devices.** The government may consider promoting the use of ignition interlock devices to prevent vehicle ignition if the driver's blood alcohol level exceeds prescribed limits.
- ii) **Imposition of Heavy Penalties.** Strict enforcement of heavy penalties on individuals who exceed speed limits could serve as a deterrent for speeding and improve road safety.
- iii) **Strengthening Driving Tests.** Driving tests for obtaining a license should be made more stringent and foolproof to ensure that only qualified individuals are allowed to drive.
- iv) **Installation of Road Dividers.** Multiple lanes of roads should be divided by barriers or dividers to prevent unsafe overtaking and reduce the risk of accidents.
- v) **Strict Enforcement of Traffic Rules.** Existing traffic rules should be strictly enforced through increased monitoring and public awareness campaigns.
- vi) **Enhanced Road Signage.** Speed limit and other necessary road signs should be strategically placed in critical areas to improve visibility and provide clear guidance to drivers.

Note. I have written the complete report here. But you address the question in the exam, i.e., prepare the parts of the report as per the requirements of the question.

Progress Report

To effectively communicate progress on projects, it is essential to structure progress reports in a clear and organized manner. Your supervisors may want to know what you are doing at work and what progress you are making on a project, whether you are on schedule, what difficulties you might have encountered, and/or what your plans are for the next reporting period. Because of this, supervisors ask you to write progress reports-daily, weekly, monthly, quarterly, or annually. Following are the parts of a progress report:

1. Introduction (overview, background)

- Why you are writing this report
- What the report is about
- If this is the second, third or fourth report in a series, remind your readers what works has already been accomplished.

2. Discussion

- i) **Works accomplished:** Write work accomplished in certain order with description.
- ii) **Works remaining:** tell your reader(s) what work you plan to accomplish next with description.
- iii) **Problems encountered:** Inform your reader(s) of any difficulties encountered.

3. Conclusion

Sum up what you have achieved, what you are doing and what problems you encountered during this reporting period and provide your target completion date.

5. Recommendations

If problems are presented in the discussion, you can recommend changes in services, scheduling, budget or material which will help you meet your deadlines.

Exemplary Junction

1. Suppose you are the Chief Engineer of construction of library building at Thapathali Campus. Write the second monthly **progress report in a memo format**.

**CHAUDHARY CONSTRUCTION COMPANY LIMITED
HATTIBAN, LALITPUR**

MEMORANDUM

To: Er. Shiva Raj Luitel Manager

Managing Director

From: Sambridhi Sharma

Chief Engineer

Date: November 3, 2023

Subject: Second Monthly Progress Report on the Construction of Library
Building at Thapathali Campus

Introduction

In response to your request dated October 30, 2023, please find our second monthly progress report on the construction of the library building at Thapathali Campus in Thapathali, Kathmandu. As stated in our previous report, we have completed initial tasks such as surveying, raw material collection, manpower selection, and tentative project budgeting.

During the second month, we aimed to accomplish the following tasks:

- i) Construction of the ground floor
- ii) Allocation of interior rooms on the ground floor
- iii) Construction of toilets within the library

Discussion

Works Accomplished

During the second month, we successfully completed the following tasks:

- i) Site clearance
- ii) Worker selection

- iii) Management of materials for toilet construction
- iv) Toilet construction
- v) Foundation excavation and formwork

Works Remaining

To meet this month's target, we need to complete the following tasks:

- i) Construction of ground floor walls
- ii) Internal division and installation of shear walls

Problems Encountered

We encountered the following issues during this month, which have affected the construction progress:

- i) Fuel shortages
- ii) Power outages

Conclusion

Despite facing fuel shortages and power outages, we have maintained our construction progress as best as possible. Therefore, we are confident in meeting this month's target before November 15, 2023.

Recommendations

We recommend that the concerned authorities coordinate with the fuel supplier and Nepal Electricity Authority to ensure 24-hour availability of fuel and electricity as per our requirements.

Best Regards,

.....

2. As a Chief Engineer of a micro hydro-power project launched in one of the remote sites of Dhading district, write the second quarterly **progress report in a letter format** inventing details.

DEVKOTA CONSTRUCTION PVT. LTD.
BANESHWOR, KATHMANDU

17th September 2023

Bahrabise, Dhading

To,

The Secretary

Ministry of Construction

Kathmandu, Nepal

Subject: Second Quarterly Progress Report on Micro Hydro-power Project

Respected Sir/Madam,

In response to your request dated September 13, 2023, please find below our second quarterly progress report on the micro hydro-power project launched in Barhabise-5, Dhading. As described in our previous report, during the first quarter, we completed initial tasks such as site clearing, surveying, raw material collection, and tunnel construction. In the second quarter, our construction plans included the following:

- i) Dam construction
- ii) Powerhouse construction

Discussion

Works Accomplished

During the second quarter, we successfully completed the following tasks:

- i) Site clearing
- ii) Dam construction
- iii) Selection of workers for the powerhouse construction
- iv) Excavation for the powerhouse foundation

Works Remaining

To achieve our goals for this quarter, we need to complete the following tasks:

- i) Procurement of raw materials for the powerhouse construction
- ii) Powerhouse construction

Problems Encountered

We encountered the following issues during this quarter:

- i) Landslides
- ii) Local opposition
- iii) Fuel shortages

Conclusions

Despite the challenges, our construction work is progressing smoothly, and we remain confident in meeting our target completion date of November 1, 2023.

Recommendations

We recommend the following actions for the smooth running of the project.

- i) Address the concerns of the local community regarding the project's impact on their settlement, possibly through dialogue and reassurance.
- ii) Ensure timely provision of fuel as per our requirements.

Thank you for your attention to this matter.

Sincerely yours,

.....

Chiranjibi Devkota

Chief Engineer

Devkota Construction Pvt. Ltd.

Field Report

A field report is a detailed account or documentation of observations, findings, or experiences gathered by an individual or a team while conducting research, investigations, or activities in a specific field or location. Field reports are commonly used in various disciplines such as anthropology, sociology, environmental science, engineering, geology, and others where researchers need to gather firsthand information from the field. These reports typically include detailed descriptions of the research methods employed, the data collected, the observations made, and the analysis of the findings. They often serve as a primary source of information for further analysis, decision-making, or as a basis for future studies.

The format and structure of a field report can vary depending on the specific requirements of the project, purposes, and the guidelines provided by the institution or organization.

Structure of a Field Report Sample 1

Heading

- Date
- From
- To

Subject line**Salutation (optional)****Introduction**

- Name and date of the event or observation.
- Organizer of the event/program/seminar
- Brief overview of the purpose and context of the event.
- Your purpose to attend the event.
- If you are writing the report in response to somebody's request, mention it.

Findings

- Key insights or observations from the event.
- Summary of discussions, presentations, or activities.
- Identification of major themes or topics discussed.

Conclusion

- Summary of the main findings or insights.
- Reflection on the significance of the findings.
- Note on any implications for future actions or research.

Recommendation

- Specific actions or steps suggested based on the findings.
- Justification for each recommendation.
- Consideration of potential challenges or limitations.
- Suggestions for further research or follow-up activities.

Exemplary Junction

Suppose you attended a conference on "IT and Its Role in Nepal" organized by Himalaya College of Engineering, Kathmandu, on November 10, 2023. Write a report on your observations from the event to be submitted to your department head.

Date: November 13, 2023

To: Er. Ashok GM

From: Anamika Rai

Subject: Observation Report on the Conference on IT and Its Role in Nepal

Introduction

I had an opportunity to attend the conference on "IT and Its Role in Nepal," organized by Himalaya College of Engineering, Kathmandu, on November 10, 2023, at the Indreni Banquet, Kathmandu. The conference aimed to explore the current state of information technology in Nepal and its potential role in driving the country's development across various sectors. As a representative from the Department of Electronics, Communication and Information Engineering, my purpose in attending the event was to gain insights into the challenges and opportunities facing Nepal's IT sector and to identify potential areas for collaboration and knowledge exchange. The event brought together industry experts, academics, and policymakers to discuss key challenges, opportunities, and strategies for leveraging IT in Nepal's context.

Findings

During the conference, several key findings and insights emerged:

- i) **Current IT Landscape.** The discussions highlighted the rapid growth of the IT sector in Nepal, particularly in areas such as software development, digital innovation, and IT services. However, there were concerns raised about the need for more investment in infrastructure and human resources to fully harness the potential of IT.
- ii) **Challenges.** Participants identified various challenges facing the IT sector in Nepal, including the lack of skilled manpower, inadequate infrastructure, limited access to financing, and regulatory barriers. These challenges were seen as hindrances to the sector's growth and competitiveness.
- iii) **Opportunities.** Despite the challenges, there was optimism about the opportunities presented by IT, especially in areas such as e-governance, digital entrepreneurship, e-commerce, and IT-enabled services. Participants emphasized the need for strategic planning and collaboration to capitalize on these opportunities.

- iv) **Role of Education.** The role of education in preparing a skilled workforce for the IT sector was emphasized. Participants stressed the importance of industry-academia partnerships, practical training programs, and curriculum updates to align with industry needs.

Conclusion

The conference on "IT and Its Role in Nepal," organized by Himalaya College of Engineering, Kathmandu, on November 10, 2023, provided valuable insights into the state of information technology in Nepal. The discussions and findings underscored the rapid growth of the IT sector while highlighting the challenges and opportunities it faces. By focusing on skills development, infrastructure improvement, policy support, and industry-academia collaboration, Nepal can create a robust IT ecosystem that contributes significantly to the country's development.

Recommendations

Based on the observations and discussions at the conference, the following recommendations are proposed:

- i) **Skills Development.** Invest in initiatives to enhance IT skills through training programs, workshops, and curriculum reforms in educational institutions.
- ii) **Infrastructure Improvement.** Focus on improving IT infrastructure, including broadband connectivity, data centers, and cybersecurity measures, to support the growth of the IT sector.
- iii) **Policy Support.** Develop policies and regulations that foster a conducive environment for IT innovation and investment, including tax incentives, legal frameworks for e-commerce, and intellectual property protection.
- iv) **Industry-Academia Collaboration.** Strengthen collaboration between the IT industry and academic institutions to bridge the gap between industry needs and educational offerings.
- v) **Promotion of IT Entrepreneurship.** Encourage and support entrepreneurship in the IT sector through initiatives such as startup incubators, access to financing, and mentorship programs.

Thanking You.

Sincerely,
Anamika Rai
BEI, III/II

Structure of a Field Report Sample 2

A field report typically follows a specific format to ensure clarity and completeness in documenting observations, findings, and other relevant details from fieldwork. Below is a general format for a Field Report Sample 2, along with explanations of each element.

Title Page

This page includes the title of the report, submitted to, the name of the author or authors, their affiliations (e.g., organization, institution), and the date of submission.

Table of Contents.

This section lists all the main sections and subsections of the report along with their corresponding page numbers for easy navigation.

Abstract.

The abstract provides a concise summary of the report, including the purpose, methods, key findings, and conclusions. It should be brief but comprehensive, giving readers a quick overview of the report's content.

Introduction.

The introduction sets the stage for the report by providing background information on the project or research, stating the objectives or research questions, and outlining the scope and methodology of the fieldwork.

Methodology.

This section describes the methods and procedures used during the fieldwork, including details about data collection techniques, tools used (e.g., surveys, interviews, observations), sampling methods, and any limitations or challenges encountered.

Findings.

The findings section presents the data collected during the fieldwork. It may include tables, charts, or graphs to illustrate the findings, and should be organized logically to facilitate understanding.

Discussion.

The discussion section provides a deeper analysis of the findings, relating them to the research objectives, existing theories or models, and broader implications. It may also address any unexpected results or discrepancies.

Conclusion.

The conclusion summarizes the key findings of the report, restates the research objectives, and discusses the implications of the findings. It should not introduce new information but rather provide a synthesis of the report's content.

Recommendations.

This section offers practical recommendations based on the findings of the report. Recommendations should be specific, actionable, and directly related to the issues addressed in the report.

References.

The references section lists all the sources cited in the report, following a specific citation style (e.g., APA, MLA).

Appendices.

Any supplementary material that supports the report but is not essential to the main text can be included in the appendices. This may include raw data, additional charts or graphs, interview transcripts, or survey questionnaires.

Each element of the report mentioned above serves a specific purpose in organizing and presenting the information gathered during fieldwork, ensuring that the report is coherent, well-structured, and informative.

Writing Project Proposal(for BE and B Arch.)

Webster's Encyclopedic Dictionary defines the term 'proposal' as a plan or scheme proposed for a certain action or project. According to M. Ashraf Rizivi (2008), a proposal is "a method of persuading people to agree to the writer's view or accept his suggestions" (p.10). It is "a systematic, factual, formal, and persuasive description of a course of action or set of

recommendations or suggestions” (p.12). RC Sharma and Krishna Mohan (2009) view a proposal as “a writer’s offer to undertake a project for creating something new or for changing or modifying an existing procedure, method, system, or structure within a specified period of time” (p.77).

A proposal is intended to convince others that you have the competence and the work plan to complete a certain project on time. Regardless of the type, all proposals must address the following questions:

- What do you plan to accomplish?
- Why you want to do it and how you are going to do it.
- How much time do you take to accomplish something?
- What is the expected cost of it?

Components of a Proposal

i. **Title page.** It includes the following:

- title of the proposal
- submitted to
- submitted by
- date of submission

ii. **Abstract.** Abstract provides a concise summary of the proposal, highlighting the context, objectives, significance, budget, and timeline of the project.

iii. **Introduction**

Introduction sets the stage for the proposal by providing context, stating the problem, outlining the objectives, and highlighting the significance of the proposed project.

iv. **Statement of the problem**

Statement of the Problem section provides a comprehensive overview of the issues/problems faced highlighting the urgency and necessity of the proposed project.

v. **Objectives/Purposes**

Objectives articulate the multifaceted goals of the project.

vi. **Methodology**

Methodology outlines a systematic approach to planning and implementing the project, focusing on needs assessment, site selection and design, cost estimation and budgeting, procurement and contracting, construction and implementation, and monitoring and

evaluation. It aims to ensure that the project meets the needs of the community, complies with relevant regulations and standards, and delivers a safe and effective infrastructure asset.

vii. Significance of the Project

This section emphasizes the multifaceted importance of the proposed project, highlighting its potential impact on various aspects.

viii. Time schedule/ Time Management Section

This cost estimation provides a detailed breakdown of the estimated costs for the proposed project.

ix. Budgeting/ Cost Management Section

This cost estimation outlines the projected expenses for the project.

x. Conclusion

Conclusion summarizes the key points of the proposal, highlighting the its significance of the overhead bridge project and its potential impacts.

Exemplary Junction

1. Suppose you are interested in constructing an overhead bridge in your town. Write title page, Introduction, Methodology, statement of the problem, cost estimation and time estimation parts of your proposal to be submitted to the mayor of your municipality.

Proposal Sample 1

Title page

A
PROPOSAL
FOR
CONSTRUCTING AN OVERHEAD BRIDGE AT BANESHWOR CHOWK

SUBMITTED TO:
BALEN SHAH
MAYOR

KATHMANDU METROPOLITAN CITY

SUBMITTED BY:
SUBARNA SINGH RAUT
ENGINEER

26 SEPTEMBER 2023

Abstract

The proposal aims to address the pressing challenges of traffic congestion and pedestrian safety at Baneshwor Chowk, a pivotal intersection in Kathmandu, Nepal. The bustling urban center of Kathmandu is marked by its vibrant streets and diverse communities. However, in the midst of the city's liveliness, there is a significant issue at Baneshwor Chowk, where several major roads meet, leading to heavy traffic congestion and safety concerns for pedestrians. The proposed construction of an overhead bridge at this location seeks to provide a safe and efficient passage for pedestrians while alleviating traffic congestion. The project's objectives include enhancing pedestrian safety, improving traffic flow, promoting urban accessibility, enhancing the area's aesthetic appeal, and fostering sustainable urban development. The significance of the project extends beyond its immediate benefits to the broader context of urban livability and sustainable transportation in Kathmandu. The estimated cost for the project is NPR 100,000,000, with a projected timeline of 2 years for completion. Through careful planning and execution, the project aims to create a safer, more accessible, and more sustainable urban environment at Baneshwor Chowk.

1. Introduction

The bustling urban center of Kathmandu, Nepal, is marked by its vibrant streets and diverse communities. However, amidst the energy of this city lies a pressing concern at Baneshwor Chowk, where the intersection of major roads converges, creating a hub of traffic congestion and pedestrian safety challenges. That is why, the construction of an overhead bridge is essential to address the escalating issues of traffic management and pedestrian safety at this pivotal location.

Baneshwor Chowk has become a bottleneck for vehicular movement and a hazard for pedestrians navigating the busy streets. The lack of a safe and efficient pedestrian crossing has led to increased risks of accidents and has hindered the smooth flow of traffic, affecting both commuters and residents alike. The need for a solution is evident, calling for the implementation of an overhead bridge that not only provides a safe passage for pedestrians but also eases the congestion at this crucial intersection.

The construction of the overhead bridge aims to enhance the safety and convenience of pedestrians, allowing them to traverse the intersection without endangering their lives. Additionally, the project seeks to alleviate traffic congestion by providing an alternative route for pedestrians, thereby improving the overall flow of vehicular traffic at Baneshwor Chowk. Furthermore, the project aims to contribute to the aesthetic appeal of the area, enhancing the urban landscape and creating a more pleasant environment for residents and visitors.

The significance of this project extends beyond the immediate benefits to the public and community. By addressing the longstanding issues of pedestrian safety and traffic management at Baneshwor Chowk, the construction of the overhead bridge will have a positive impact on the overall livability and sustainability of Kathmandu. It will promote a safer and more efficient urban environment, aligning with the city's vision for progressive urban development and improved quality of life for its residents.

2. Statement of the Problem

Baneshwor Chowk, located in the heart of Kathmandu, Nepal, serves as a vital intersection that connects major roads and facilitates the movement of traffic through the city. However, the increasing volume of vehicles and pedestrians at this junction has led to a multitude of challenges that threaten the safety and efficiency of transportation in the area.

Traffic Congestion

One of the primary problems at Baneshwor Chowk is the persistent traffic congestion that occurs during peak hours. The convergence of multiple roads and the high influx of vehicles

result in gridlock, causing delays for commuters and adding to the overall vehicular pollution in the area. This congestion not only affects the flow of traffic at the intersection but also has a ripple effect on the surrounding road network, exacerbating traffic jams throughout the vicinity.

Pedestrian Safety Hazards

In addition to traffic congestion, Baneshwor Chowk presents significant hazards for pedestrians navigating the intersection. The absence of designated pedestrian crossings and traffic signals makes it challenging for individuals to cross the busy roads safely. As a result, pedestrians often find themselves in precarious situations, risking their safety as they attempt to navigate through the traffic.

Lack of Infrastructure for Pedestrians

Furthermore, the lack of dedicated infrastructure for pedestrians, such as footpaths and safe crossing points, contributes to the hazardous conditions at Baneshwor Chowk. The absence of proper facilities for pedestrians not only endangers their safety but also hampers the overall walkability of the area, impacting the quality of life for residents and visitors alike.

Impact on Commuters and Residents

The cumulative effect of these issues has a direct impact on the daily lives of commuters and residents in the vicinity of Baneshwor Chowk. Commuters experience frustration and delays in their daily travels, while residents are concerned about the safety risks posed by the chaotic traffic conditions. Additionally, the lack of proper infrastructure for pedestrians affects the accessibility of the area, particularly for vulnerable groups such as the elderly and differently-abled individuals.

Urgent Need for a Solution

In light of these challenges, there is an urgent need to address the issues of traffic congestion and pedestrian safety at Baneshwor Chowk. The construction of an overhead bridge presents a viable solution that can alleviate these problems by providing a safe and efficient passage for pedestrians while easing the flow of vehicular traffic at this critical intersection.

3. Objectives of the Project

The construction of an overhead bridge at Baneshwor Chowk is driven by a set of clear and comprehensive objectives that aim to address the pressing issues of traffic congestion,

pedestrian safety, and urban development in the area. The objectives of the project are outlined below:

Enhance Pedestrian Safety

The primary objective of the project is to enhance pedestrian safety at Baneshwor Chowk by providing a designated and secure crossing point for pedestrians. The overhead bridge will offer a safe passage over the busy intersection, protecting pedestrians from the hazards of vehicular traffic and reducing the risk of accidents and injuries.

Improve Traffic Flow

Another key objective of the project is to improve the flow of vehicular traffic at Baneshwor Chowk. By providing a separate crossing for pedestrians, the overhead bridge will eliminate conflicts between pedestrians and vehicles, leading to smoother traffic movement and reduced congestion at the intersection. This improvement in traffic flow will benefit commuters and residents by reducing travel times and enhancing overall road safety.

Promote Urban Accessibility

The project aims to promote urban accessibility by enhancing the walkability of Baneshwor Chowk. The overhead bridge will provide a convenient and accessible route for pedestrians, including those with disabilities, elderly individuals, and parents with young children, thereby improving the overall accessibility of the area and promoting inclusive urban development.

Enhance Aesthetic Value

In addition to its functional benefits, the project seeks to enhance the aesthetic value of Baneshwor Chowk and its surrounding environment. The design of the overhead bridge will be carefully curated to complement the urban landscape and architectural character of the area, contributing to its visual appeal and creating a more attractive public space for residents and visitors.

Facilitate Sustainable Development

Furthermore, the project aligns with the principles of sustainable development by promoting environmentally friendly modes of transportation. By encouraging walking and reducing the reliance on motorized vehicles, the overhead bridge will contribute to the reduction of carbon emissions and the promotion of sustainable urban mobility in Kathmandu.

Foster Community Engagement

Finally, the project aims to foster community engagement and ownership by involving local residents, stakeholders, and authorities in the planning and implementation process.

Community input will be sought to ensure that the design and construction of the overhead bridge reflect the needs and preferences of the local population, fostering a sense of pride and ownership in the project.

4. Methodology

Following approaches will be used to plan, carry out and implement the project:

4.1 Needs Assessment and Feasibility Study

a. Review of Existing Data:

The first step of the methodology will involve a comprehensive review of existing data related to traffic flow, pedestrian movement, accident records, and urban development plans for BaneshworChowk and its surrounding areas. This review will provide a baseline understanding of the current situation, identify existing challenges, and assess the need for an overhead bridge.

b. Stakeholder Consultation:

Stakeholder consultation will be conducted with local residents, commuters, businesses, and relevant authorities to gather qualitative insights into the specific needs and concerns related to pedestrian safety and traffic management at BaneshworChowk. This consultation will help in identifying key priorities, potential challenges, and opportunities for collaboration.

c. Feasibility Study:

A feasibility study will be conducted to assess the technical, financial, and environmental feasibility of constructing an overhead bridge at BaneshworChowk. This study will consider factors such as engineering requirements, environmental impact assessments, cost estimates, and funding sources to determine the viability of the project.

4.2 Site Selection and Design

a. Site Surveys:

Site surveys will be conducted to identify suitable locations for the overhead bridge, taking into account factors such as traffic flow patterns, pedestrian volumes, existing infrastructure, and

urban planning considerations. The surveys will be conducted in collaboration with urban planners, architects, and engineers to ensure that the selected site meets the project's objectives and requirements.

b. Design Development:

Based on the findings of the needs assessment, feasibility study, and site surveys, conceptual designs for the overhead bridge will be developed. These designs will consider safety standards, accessibility requirements, aesthetic considerations, and community preferences to create a bridge that meets the needs of pedestrians and commuters while enhancing the urban landscape.

4.3 Cost Estimation and Budgeting

a. Cost Estimation.

Detailed cost estimates for the construction of the overhead bridge will be prepared, taking into account factors such as materials, labor, equipment, permits, and contingencies. These estimates will be based on industry standards, local market conditions, and input from construction experts to ensure accuracy and reliability.

b. Budgeting.

A comprehensive budget will be developed to allocate resources effectively and ensure that the project remains within the estimated cost. The budget will consider all aspects of the project, including design, construction, supervision, and contingencies, to provide a clear financial plan for the implementation of the overhead bridge.

4.4 Project Implementation Plan

a. Timeline.

A detailed timeline for the project will be developed, outlining the various stages of the construction process, key milestones, and deadlines. This timeline will serve as a roadmap for project implementation, ensuring that the project progresses according to schedule.

b. Procurement Strategy:

A procurement strategy will be developed to outline the process for acquiring materials, services, and contractors needed for the construction of the overhead bridge. This strategy will include procedures for tendering, bidding, evaluation, and selection of contractors, as well as measures to ensure transparency and fairness in the procurement process.

c. Risk Management.

A risk management plan will be developed to identify potential risks and mitigation measures associated with the construction of the overhead bridge. This plan will include strategies for addressing risks related to cost overruns, delays, technical challenges, and stakeholder management to minimize the impact of these risks on the project.

4.5 Monitoring and Evaluation

a. Progress Tracking.

A system for monitoring project progress will be established to track key milestones, expenditures, and timelines. Regular progress reports will be generated to provide updates on the status of the project and identify any deviations from the planned schedule or budget.

b. Quality Assurance.

Quality assurance measures will be implemented to ensure that the construction of the overhead bridge meets the required standards and specifications. This will involve regular inspections, testing of materials, and adherence to relevant construction codes and regulations.

c. Stakeholder Feedback.

Feedback from stakeholders, including local residents, commuters, and authorities, will be sought throughout the project to gauge satisfaction levels, address concerns, and incorporate suggestions for improvement. This feedback will be instrumental in ensuring that the project meets the needs of the community and stakeholders.

d. Evaluation of Outcomes.

An evaluation of the project outcomes will be conducted upon completion to assess the impact of the overhead bridge on pedestrian safety, traffic flow, and urban development at Baneshwor Chowk. This evaluation will provide valuable insights into the effectiveness of the project and inform future infrastructure initiatives in the area.

5. Significance of the Project

The construction of an overhead bridge at Baneshwor Chowk holds significant importance for the community, the city of Kathmandu, and the broader context of urban development and transportation in Nepal. The project's significance is multifaceted and can be understood through several key aspects:

Enhancing Pedestrian Safety.

The project's foremost significance lies in its potential to enhance pedestrian safety at Baneshwor Chowk. By providing a dedicated and secure crossing for pedestrians, the overhead bridge will mitigate the risks associated with vehicular traffic, reducing the likelihood of accidents and injuries. This improvement in pedestrian safety is crucial for creating a safer and more inclusive urban environment, particularly for vulnerable groups such as children, the elderly, and people with disabilities.

Improving Traffic Efficiency.

Another significant aspect of the project is its impact on traffic efficiency and management. The overhead bridge will separate pedestrian and vehicular traffic, minimizing conflicts and streamlining the flow of vehicles through the intersection. This improvement in traffic efficiency will not only reduce congestion and delays but also contribute to a more sustainable and resilient transportation system in Kathmandu.

Promoting Urban Livability.

The project's contribution to urban livability is significant, as it aims to create a more walkable and accessible environment at Baneshwor Chowk. The overhead bridge will encourage walking as a mode of transportation, promoting physical activity and reducing reliance on motorized vehicles. This shift towards sustainable urban mobility aligns with global trends towards more livable and environmentally friendly cities.

Enhancing Aesthetic Appeal.

In addition to its functional benefits, the project will enhance the aesthetic appeal of Baneshwor Chowk and its surrounding area. The design of the overhead bridge will be carefully integrated into the urban landscape, creating a visually pleasing structure that adds to the architectural character of the locality. This enhancement of the area's aesthetic appeal contributes to a more vibrant and attractive urban environment.

Supporting Sustainable Development Goals.

The project's alignment with sustainable development goals is significant, as it contributes to several key objectives such as sustainable cities and communities, good health and well-being, and reduced inequalities. By prioritizing pedestrian safety, traffic efficiency, and urban livability, the project supports a more sustainable and equitable urban development trajectory for Kathmandu.

Fostering Community Engagement.

Finally, the project's significance lies in its potential to foster community engagement and ownership. By involving local residents, stakeholders, and authorities in the planning and implementation process, the project promotes a sense of ownership and pride in the local community. This community engagement is essential for ensuring the long-term success and sustainability of the project.

In conclusion, the construction of an overhead bridge at Baneshwor Chowk is significant for the community, the city of Kathmandu, and the broader context of urban development and transportation in Nepal. Through its impact on pedestrian safety, traffic efficiency, urban livability, aesthetics, sustainability, and community engagement, the project represents a pivotal step towards creating a safer, more accessible, and more sustainable urban environment at Baneshwor Chowk.

6. Time Management Section

The construction of the overhead bridge at Baneshwor Chowk is scheduled to commence on October 30, 2023, and is projected to be completed by November 15, 2025. The project timeline has been carefully planned to ensure efficient progress while maintaining high-quality standards and adhering to safety regulations. The time for different works has been allocated as follows:

SN	Description of the Work	Time Duration
1	Site Preparation and Mobilization	3 months
2	Foundation and Substructure	6 months
3	Superstructure Construction	12 months
4	Finishing and Detailing	3 months
5	Testing and Quality Assurance	3 months
6	Commissioning and Handover	3 months
7	Miscellaneous	3 months
	Total	24 months

The project team will closely monitor the progress of each activity and implement measures to mitigate any potential delays, ensuring that the project remains on schedule. Regular progress reports and updates will be provided to stakeholders to maintain transparency and accountability throughout the construction process.

7. Cost Estimation

The construction of the overhead bridge at Baneshwor Chowk is estimated to cost a total of NPR 100,000,000. This budget has been carefully allocated across different categories to ensure that all aspects of the construction project are adequately funded while allowing for flexibility to address any unforeseen expenses or changes in the project scope. The breakdown of costs is as follows:

Category of the work	Estimated Cost (NPR)
Purchase of Materials	40,000,000
Labor/wages	25,000,000
Purchase of Equipment and machines	10,000,000
Engineering and Design	5,000,000
Permits and Approvals	3,000,000
Contingency and Miscellaneous	17,000,000
Total Project Cost	100,000,000

This detailed cost estimation provides transparency in the allocation of funds and ensures that the construction of the overhead bridge is adequately funded to meet quality and safety standards, as well as the project timeline.

Conclusion

In conclusion, the construction of an overhead bridge at Baneshwor Chowk is a transformative infrastructure project that addresses the pressing issues of pedestrian safety, traffic congestion, and urban development in Kathmandu. With an estimated cost of NPR 100,000,000 and a projected timeline of 2 years for completion, this project represents a significant investment in the improvement of urban infrastructure and the enhancement of the city's livability.

Note. I have written the complete proposal here. But you address the question in the exam, i.e., prepare the parts of the proposal as per the requirements of the question.

2. Imagine that you are interested in undertaking the reconstruction of Dharahara destroyed by the devastating earthquake of April 25, 2015. Write only abstract, technical section, cost management section and time management sections of the proposal to be submitted to the Ministry of Culture, Nepal.

Abstract

The proposal outlines a comprehensive plan for the reconstruction of Dharahara, incorporating a multidisciplinary approach to address its structural, architectural, and cultural aspects. The project will commence with a detailed structural assessment to determine necessary interventions for seismic resilience. Architectural design of Dharahara will blend historical authenticity with modern materials and technologies, prioritizing accessibility for all visitors. Locally sourced materials will be used to support the economy and reduce environmental impact. The project is estimated to cost NPR 2,500,000,000. It is scheduled to start on January 30, 2024, aiming for completion by February 15, 2027, with strict monitoring to ensure adherence to the timeline.

Technical Section

The reconstruction of Dharahara will require a multidisciplinary approach to address its structural, architectural, and cultural aspects. The project will be commenced with a detailed structural assessment to evaluate the extent of damage and determine the necessary structural interventions. This assessment will guide the seismic retrofitting and reinforcement measures to ensure the monument's resilience against future seismic events. The architectural design will be based on historical records and traditional building techniques, incorporating modern materials and technologies where necessary while preserving the monument's historical and cultural authenticity. Special attention will be given to accessibility, ensuring that the reconstructed Dharahara is inclusive and accessible to all visitors. The project will also prioritize the use of locally sourced materials to support the local economy and reduce environmental impact.

Cost Management Section

The total budget estimated to reconstruct Dharahara is NPR 2,500,000,000. The budget allocation is detailed in the table below,

Description of the work	Estimated Cost (NPR)
-------------------------	----------------------

Description of the work	Estimated Cost (NPR)
Site Clearing	50,000,000
Survey	30,000,000
Purchase and Collection of Materials	800,000,000
Selection of Workers/Wages	100,000,000
Construction	600,000,000
Miscellaneous	920,000,000
Total Project Cost	2,500,000,000

Time Management Section

The reconstruction of Dharahara is scheduled to commence on January 30, 2024, and it is projected to be completed by February 15, 2027. The time allocation for different works has been detailed as follows:

Work description	Time Duration
Site Clearing	2 months
Survey	3 months
Purchase and Collection of Materials	12 months
Selection of Workers/Wages	3 months
Construction	18 months
Miscellaneous	24 months
Total Project Duration	36 months (3 years)

The project team will closely monitor the progress of each activity and implement measures to mitigate any potential delays, ensuring that the project remains on schedule.

3. Write a proposal for the establishment of a paper factory in Bara district, Nepal. Show only the title page, Abstract, Statement of problem and time management section of the proposal.

Title Page

A
PROPOSAL
FOR
ESTABLISHMENT OF A PAPER FACTORY IN BARA DISCTRICT

SUBMITTED TO:
MINISTRY OF INDUSTRY, COMMERCE AND SUPPLIES
KATHMANDU, NEPAL

SUBMITTED BY:
ANUBHAV SHRESTHA
ENGINEER

Abstract

This proposal
outlines the
establishment
of a paper
factory in Bara
district, Nepal,

20 SEPTEMBER 2023

to address the pressing need for locally-produced paper products. The project aims to mitigate the challenges arising from the absence of domestic paper manufacturing facilities, the inability of existing factories to meet demand, delays in supplying educational materials to remote areas, Nepal's reliance on costly and low-quality imported paper, and the underutilization of available raw materials. The establishment of the factory is expected to have a significant impact on the local economy and education sector while reducing the country's reliance on paper imports. The proposed factory will be established with a budget of NPR 30 crore over a timeline of 2 years, starting on November 7, 2023.

Introduction

Nepal currently faces a critical shortage of domestically produced paper, leading to various challenges such as inadequate supply to meet demand, especially in remote areas, and heavy reliance on expensive and substandard imported paper from countries like India and China. This situation has resulted in significant economic implications due to the country's substantial investment in paper imports. Additionally, the lack of a local paper manufacturing facility has led to the underutilization of available raw materials for paper production. To address these challenges, this proposal aims to establish a modern paper factory in Bara district, Nepal, to produce high-quality paper products and reduce the country's dependency on paper imports.

Statement of the Problem

The absence of a domestic paper manufacturing factory in Nepal has led to several critical issues. Firstly, existing factories are unable to satisfy the country's demand for paper products, resulting in a shortage that particularly affects students in remote areas who do not receive books and copies on time. Secondly, Nepal's reliance on imported paper is not only costly but also compromises quality. Furthermore, the country's substantial investment in paper imports from other countries like India and China has strained the economy. Lastly, despite the availability of raw materials for paper production, their potential remains largely untapped. These challenges underscore the urgent need to establish a paper factory in Bara district, Nepal, to address the country's paper production deficiencies.

Objectives

- i) To establish a state-of-the-art paper manufacturing facility in Bara district, Nepal, to produce high-quality paper products.
- ii) To meet the increasing demand for paper products in Nepal, especially in remote areas, to ensure timely availability of educational materials for students.
- iii) To reduce Nepal's reliance on imported paper by producing locally-sourced, cost-effective, and environmentally sustainable paper.
- iv) To utilize the available raw materials in Nepal for paper production, thereby contributing to the country's economic growth and resource optimization.

Significance of the Project

The establishment of a paper factory in Bara district, Nepal, holds immense significance for several reasons. Firstly, it will address the critical shortage of domestically produced paper,

particularly benefiting students in remote areas who currently face delays in receiving educational materials. Secondly, it will reduce Nepal's reliance on expensive and low-quality imported paper, leading to cost savings and improved product quality. Thirdly, the project will contribute to the country's economy by creating employment opportunities and stimulating the growth of the local paper industry. Finally, by utilizing Nepal's abundant raw materials for paper production, the project will promote sustainable development and resource utilization in the country.

Time Management

The project is planned to be completed over a period of two years, starting on November 7, 2023, with the following key milestones and activities:

Description of the work	Timeframe
Feasibility Study	1 month
Site Selection	1 months
Design and Planning	2 months
Regulatory Approvals	1 months
Construction	11 months
Installation of Equipment	5 months
Testing and Commissioning	1 months
Miscellaneous	2 months
	Total=24 months

Cost Management

The total budget estimated for the project is NPR 300,000,000 (Nepalese Rupees). The budget allocation for different activities is as follows:

Activity	Budget Allocation (NPR)
Feasibility Study	5,000,000
Site Selection and purchase of land	6,50,00,000
Design and Planning	100,00,000

Activity	Budget Allocation (NPR)
Regulatory Approvals	3000,000
Purchase of raw material and equipment plus machines	20,00,00,000
Construction	20,00,000
Installation of Equipment	50,00,000
Testing and Commissioning	50,00,000
Contingency	100,00,000
	Total= 300,000,000

Conclusion

In conclusion, the establishment of a paper factory in Bara district, Nepal, is not only a strategic economic initiative but also a crucial step towards addressing the pressing challenges faced by the country's paper industry. This modern paper manufacturing factory will not only meet the increasing demand for paper products but also contribute to the local economy, reduce dependency on imported paper, and utilize Nepal's abundant raw materials effectively. By investing in this project, Nepal can enhance its industrial capacity, create employment opportunities, and improve the availability and quality of locally produced paper products.

Writing Research Article(for BE)

Writing a research article involves investigating, observing, and describing a specific issue. It also requires interpreting and analyzing the available data on the issue or topic. While the research topic can relate to any field of study, it should adhere to a defined format or structure, including common elements found in a well-structured research article. In a research article, authors present their own perspectives on the topic and support their ideas with existing arguments and evidence. A good research article typically includes the following elements or parts:

1. **Title Page.**

- **Purpose:** The title page provides essential information about the research article, such as its title, the author's name and email address, the recipient (if applicable), and the date of submission (if applicable).
- **Key Points:**
 - The title should be specific and descriptive.
 - Include the names of all authors, email address and their affiliations.
 - Clearly indicate the intended audience or recipient, if applicable.

2. Objectives:

- **Purpose:** This section outlines the specific goals or purposes of the research.
- **Key Points:**
 - Objectives should be clear and concise.
 - Avoid using mental verbs (e.g., understand, know) when stating objectives.
 - Objectives should be directly related to the research problem or question.

Note: In writing a research article, the objectives section may or may not be separate, but the abstract is typically written after the title.

3. Abstract:

- **Purpose:** The abstract provides a concise summary of the entire research article.
- **Key Points:**
 - Include a brief background of the research.
 - Clearly state the objectives and methods used.
 - Summarize the findings, conclusions, and recommendations.
 - Include keywords relevant to the research topic.

4. Introduction:

- **Purpose:** The introduction sets the stage for the research by providing background information and stating the research objectives.
- **Key Points:**
 - Introduce the research topic and its significance.
 - Clearly state the research problem or question.
 - Provide an overview of the structure of the article.

5. Literature Review:

- **Purpose:** The literature review examines existing research and knowledge related to the research topic.
- **Key Points:**
 - Review relevant literature to establish context.
 - Identify gaps or areas where further research is needed.
 - Discuss how existing literature informs the current research.

6. Method/Methodology:

- **Purpose:** This section describes the methods used to conduct the research.
- **Key Points:**
 - Describe the research design, data collection methods, and analysis techniques.
 - Justify the chosen methods and discuss any limitations.

7. Results/Findings:

- **Purpose:** Present the findings of the research without interpretation.
- **Key Points:**
 - Report the results in a clear and organized manner.
 - Use tables, figures, or graphs to illustrate key findings.

8. Discussion:

- **Purpose:** Analyze and interpret the results in the context of the research objectives.
- **Key Points:**
 - Interpret the findings and their implications.
 - Discuss how the results align with existing literature.
 - Address any limitations of the study.

9. Conclusion:

- **Purpose:** Summarize the main findings and their implications.
- **Key Points:**
 - Recap the key findings without introducing new information.
 - Discuss the broader implications of the research.
 - Suggest areas for future research.

10. Recommendations:

- **Purpose:** Provide suggestions for action based on the research findings.
- **Key Points:**
 - Offer specific recommendations for addressing the research problem.
 - Explain how the recommendations are linked to the findings.

11. Works Cited/References.

- **Purpose:** Provide a list of all sources cited in the research article.
- **Key Points:**
 - Follow a specific citation style (e.g., APA, MLA) consistently.
 - Include all necessary bibliographic information for each source.
 - Ensure that all in-text citations are included in the reference list, and vice versa.

1. Write a short research article on the importance of English language proficiency for engineering students.

Research Article Sample 1

Importance of English language proficiency for engineering students

Bikash Bista

bistabikash2056@gmail.com

Abstract

This study explores the significance of English language proficiency for engineering students. The research investigates the impact of English skills on academic performance, employability, and global competitiveness. Data were gathered through a literature review and surveys. The findings emphasize the critical role of English proficiency in enhancing communication, collaboration, and career prospects for engineering graduates.

Introduction

English has become the lingua franca of global communication, including the field of engineering. The ability to comprehend, speak, read, and write in English is essential for engineering students to succeed in their academic pursuits and future careers. This study aims to examine the importance of English language proficiency for engineering students, focusing on its impact on academic achievement, employability, and competitiveness in the global job market.

Literature Review

English proficiency is a key factor in academic achievement for engineering students. Research by Smith (2018) and Brown & Lee (2019) has demonstrated a positive correlation between English proficiency and academic performance. English language skills are crucial for understanding complex technical concepts, accessing scholarly resources, and presenting research findings effectively.

In terms of employability, the relevance of English proficiency cannot be overstated. Employers, especially in multinational engineering firms, prioritize candidates with strong English communication skills (Jones & Wang, 2020). Proficient English speakers are better equipped to collaborate with international teams, communicate with clients, and adapt to diverse work environments.

Furthermore, English proficiency enhances the global competitiveness of engineering graduates. According to Chen et al. (2021), proficiency in English opens doors to international job opportunities and facilitates participation in global research and innovation networks. In today's globalized economy, English fluency is a significant asset for engineers seeking to advance their careers on the international stage.

Methodology

This study utilized a mixed-methods approach, combining a comprehensive literature review with a survey of engineering students from diverse backgrounds. The survey assessed participants' self-reported English proficiency levels, perceived impact on academic and career development, and attitudes toward language learning. The survey sample consisted of undergraduate and postgraduate engineering students from multiple institutions.

Findings

The literature review confirmed the crucial role of English proficiency in academic success, employability, and global competitiveness for engineering students. Survey results indicated that a majority of respondents recognized the importance of English skills in their academic and professional lives. However, some students expressed challenges in developing and maintaining English proficiency alongside their engineering coursework. This suggests a need for tailored support and resources to address the specific language learning needs of engineering students.

Discussion

The findings of this study underscore the critical importance of English language proficiency for engineering students, impacting various facets of their academic and professional lives. The literature review confirmed the multifaceted role of English proficiency in academic success, employability, and global competitiveness, aligning with previous research that has highlighted the significance of language skills in engineering education (Smith, 2018; Brown & Lee, 2019; Chen et al., 2021).

The survey results provided valuable insights into the perceptions and experiences of engineering students regarding English language proficiency. The majority of respondents acknowledged the significance of English skills for their academic and professional advancement. This acknowledgment reflects an awareness among students of the practical benefits associated with English proficiency in their future careers, where effective communication is pivotal for success.

However, the survey also revealed that some students face challenges in developing and maintaining their English proficiency alongside their rigorous engineering coursework. These challenges could stem from various factors, such as the demanding nature of engineering programs, time constraints, or limited exposure to English language environments outside of formal education. The identification of these challenges underscores the need for tailored support and resources to address the specific language learning needs of engineering students.

To address these challenges, engineering programs should integrate English language instruction effectively into their curricula. This integration should not be limited to language courses but should encompass a broader approach that incorporates English communication skills into technical coursework and projects. By embedding language learning within the

engineering curriculum, students can develop a more holistic set of skills that prepares them for the demands of a globalized engineering industry.

In addition to curriculum integration, institutions should provide support services dedicated to enhancing English language skills. These services could include language courses tailored to the needs of engineering students, communication workshops focusing on technical writing and presentation skills, and language support programs designed to assist students in overcoming specific language barriers. By offering such resources, institutions can better equip students to navigate the linguistic challenges they may encounter in their academic and professional pursuits.

Furthermore, creating a multicultural learning environment within engineering programs can play a crucial role in fostering cross-cultural communication skills among students. Exposure to diverse perspectives and communication styles can enhance students' ability to collaborate effectively in multicultural teams, a skill that is highly valued in the global engineering workforce. By promoting diversity and inclusivity, engineering programs can better prepare students to thrive in the international context of modern engineering practice.

The findings of this study emphasize the need for a comprehensive approach to English language instruction in engineering education. By integrating language learning into the curriculum, providing targeted support services, and fostering a multicultural learning environment, institutions can better prepare engineering students to succeed in a globalized world where effective communication is paramount.

Conclusion and Recommendations

In conclusion, English language proficiency is vital for the academic and professional success of engineering students in a globalized world. Institutions should prioritize the development of English communication skills alongside technical knowledge. This can be achieved through targeted language programs, interdisciplinary collaborations between language and engineering departments, and experiential learning opportunities that emphasize real-world communication skills.

Future research could focus on the effectiveness of specific language programs and interventions in improving English proficiency among engineering students. Additionally, longitudinal studies tracking the career trajectories of engineering graduates based on their

English proficiency levels could provide valuable insights into the long-term impact of language skills on professional success.

2. Write a short research article on Effectiveness of online classes for engineering students in Nepal

Research Article Sample 2

Effectiveness of Online Classes for Engineering Students in Nepal

Shiva Raj Luitel

luitelshiva2051@gmail.com

Senior Lecturer, Himalaya College of Engineering

Abstract

This study examines the effectiveness of online classes for engineering students in Nepal, focusing on their impact on academic performance, learning outcomes, and student satisfaction. Data were collected through a literature review and surveys. The findings indicate that while online classes offer flexibility and accessibility, they also present challenges related to technical issues, engagement, and practical skill development. Recommendations are provided to enhance the effectiveness of online engineering education in Nepal.

Introduction

The COVID-19 pandemic has accelerated the adoption of online education globally, including in Nepal. As engineering education transitions to online platforms, it is essential to assess the effectiveness of this mode of instruction for students in Nepal. This study aims to evaluate the effectiveness of online classes for engineering students, considering their unique learning needs and the context of Nepal.

Literature Review

Benefits of Online Classes

Online classes offer several potential benefits for engineering students. They provide flexibility in scheduling, allowing students to balance their academic studies with other commitments (Al Lily et al., 2019). Online platforms also facilitate access to a wide range of learning resources, including multimedia materials and interactive simulations, which can enhance the learning experience (Boling et al., 2012).

Challenges of Online Classes

Despite the benefits, online classes present challenges that are particularly relevant to engineering education in Nepal. Technical issues such as poor internet connectivity and limited access to digital devices can hinder students' participation and engagement (Samarawickrema & Stacey, 2007). Additionally, the hands-on nature of engineering education may be difficult to replicate in an online environment, impacting students' practical skill development (Concannon et al., 2005).

Impact on Academic Performance

Research on the impact of online classes on academic performance in engineering education is mixed. While some studies report positive outcomes, such as improved grades and retention rates (Means et al., 2013), others suggest that online learning may be less effective than traditional classroom instruction for certain subjects and student populations (Bernard et al., 2004).

Methodology

This study employed a mixed-methods approach, combining a comprehensive literature review with surveys distributed to engineering students in Nepal. The surveys assessed students' experiences with online classes, including their perceptions of effectiveness, challenges encountered, and suggestions for improvement. The sample included undergraduate and postgraduate engineering students from multiple institutions across Nepal.

Findings

The literature review provided insights into the potential benefits and challenges of online classes for engineering students, aligning with the experiences reported by survey respondents. While many students appreciated the flexibility and accessibility of online learning, they also faced significant challenges related to internet connectivity, technical issues with online platforms, and the lack of hands-on learning opportunities.

Discussion

The findings of this study highlight the need for a nuanced approach to the implementation of online classes for engineering students in Nepal. While online education offers advantages in terms of flexibility and access to resources, it is essential to address the challenges that students face, particularly concerning technical infrastructure and practical skill development.

One key consideration is the improvement of internet connectivity and access to digital devices, which are crucial for effective participation in online classes. This may require investment in infrastructure and resources by both educational institutions and the government to ensure that students from diverse backgrounds have equal opportunities to engage in online learning. Another important aspect is the design of online courses to promote active learning and practical skill development. Engineering education traditionally relies heavily on hands-on laboratory work and project-based learning, which may be challenging to replicate in an online setting. However, innovative approaches such as virtual laboratories and simulation-based learning can help bridge this gap and provide students with practical experiences that complement theoretical knowledge (Samarawickrema & Stacey, 2007).

Furthermore, ongoing support and training for both students and instructors are crucial for the success of online classes. Students need guidance on how to navigate online learning platforms effectively, while instructors require training in online pedagogy and the use of digital tools to create engaging and interactive learning experiences (Boling et al., 2012).

Broadly, the transition to online learning, accelerated by the COVID-19 pandemic, has prompted the need for a comprehensive evaluation of its impact on engineering education in Nepal.

Conclusion and recommendations

In conclusion, while online classes offer potential benefits for engineering students in Nepal, they also present unique challenges that require careful consideration and proactive measures. By addressing issues related to infrastructure, course design, and support mechanisms,

educational institutions can enhance the effectiveness of online engineering education and ensure that students receive a high-quality learning experience.

Varieties of English (for B Arch.)

1. Formal and Informal English

Formal and informal languages serve different purposes in communications depending on the reader (Audience) and reason for writing (Purpose). The tone, the choice of words and the way the words are put together vary between the two different styles.

Formal language is less personal than informal language. It is used when writing for professional or academic purposes like graduate school assignments. Formal language does not

use colloquialisms, contractions, informal words, acronyms, first-person pronouns such as “I” or “We, and it is well-structured grammatically.

Informal language is more casual and spontaneous. It is used when communicating with friends or family either in writing or in conversation. It is used when writing personal emails, text messages and in some business correspondence. The tone of informal language is more personal than formal language. Informal language makes the use of informal words, contractions, slangs, phrasal verbs, acronyms, personal pronouns and it is often less-structured grammatically.

Examples of formal and informal language are shown below:

Contractions

- **Informal:** The improvements *can't* be made due to budget cuts.
- **Formal:** Improvements *cannot* be made due to budget restrictions.

Phrasal Verbs

- **Informal:** The balloon was *blown up* for the experiment.
- **Formal:** The balloon was *inflated* for the experiment

Slang/Colloquialism

- **Informal:** Professors *still count on* students to use correct grammar and punctuation in essays.
- **Formal:** Professors *expect* students to use correct grammar and punctuation in essays.

First Person Pronouns

- **Informal:** *I* considered various research methods for the study.
- **Formal:** Various research methods were considered for the study.
- **Informal:** During the interview we asked the applicants for a personal reference.
- **Formal:** During the interview applicants were asked to provide a personal reference.

Grammar

- **Informal:** Hey, what's up? I was just wondering if you're coming to the party tonight.

- **Formal:** Hello, I hope this message finds you well. I would like to inquire about your attendance at the event scheduled for this evening.
- **Informal:** What country was he born in?
- **Formal:** In which country was he born?
- **Informal:** I know the person who you spoke to.
- **Formal:** I know the person to whom you spoke.
- **Informal:** Hey how's it going?
- **Formal:** Good morning! How are you?
- **Informal:** They'll attend the meeting tomorrow.
- **Formal:** They will be attending the meeting tomorrow.
- **Informal:** Sorry!
- **Formal:** I would like to apologies for any inconvenience caused.
- **Informal:** I wanna pass my English Exam.
- **Formal:** I want to pass my English Exam.
- **Informal:** She's decided to accept the job.
- **Formal:** She has decided to accept the job.
- **Informal:** The man I met in India was interested to visit Nepal. (Relative clause without relative pronoun)
- **Formal:** The man whom I met in India was interested to visit Nepal.
- **Informal:** Went to Barcelona for the weekend. Lots to tell you.
- **Formal:** We went to Barcelona for the weekend. We have a lot of things to tell you.

Words

Some words are considered formal, whereas others are considered informal in English.

Following is the list of some formal and informal words in English.

Informal	Formal
Avoid	Evade
Also In	Addition,
Ask	Enquire
Afraid	Fearful

Informal	Formal
Anyways	Nevertheless
Plus/Also	Moreover/ Furthermore
But	However
So	Therefore/Thus
Also	In addition, Additionally
ASAP	as soon as possible/at your earliest convenience
Okay, OK	acceptable
In the meantime	In the interim
I think	In my opinion,
In the end,	Finally
To sum up	In conclusion,
In a nutshell/Basically	To summarize,
All right	Acceptable

An example of a message that uses informal and formal language might look like this:

- **Informal:**

Hey Tom, I'm really sorry but I'm running a bit late for the meeting. I missed my bus. You can wait for me inside the cafe if you want. I hope I won't be late for long!

- **Formal:**

Dear Tom,

Please accept my sincere apologies. I must inform you that I would most likely be late for our scheduled meeting due to unforeseen circumstances.

Perhaps you could wait for me inside the cafe. Hopefully, I will arrive shortly.

Regards, Sonia.

Note: Shifting between formal and informal English does not change the meaning; rather, it is merely a matter of using different words or structure to express the same idea.

2. Familiar/ Impolite and Polite English

We use polite English to communicate with seniors and strangers. In polite English modal auxiliaries (would, could, may, might, shall, should), formal words of greeting (Mr., Mrs., Miss) are used. On the other hand, familiar language is used when we talk to our juniors and intimate ones. Examples:

Polite	Impolite
Would you please show me the direction to Himalaya College of Engineering? Would you mind showing me the direction to Himalaya College of Engineering? I wonder if you mind showing me the direction to Himalaya College of Engineering. I would be happy if you could tell me the way to Himalaya College of Engineering. Could you tell me the way to Himalaya College of Engineering?	Show me the direction to Himalaya College of Engineering.
I would like to invite Mr. Ram on the stage.	I want to call Ram on the stage.
Please, hurry up.	Hurry up.
Have your seat please.	Sit down.
May I have your pen please?	Give me your pen.
Have a drink, why don't you? (less polite) Would you please take a drink? (polite)	Do you take a drink?
Will you please help the poor? Would you please help the poor?	Help the poor.

Note: Words like ‘please’ and ‘kindly’ have the sole function of indicating politeness.

3. Personal and impersonal English

When the speaker makes use of personal pronouns in his expressions that is taken as personal English. On the other hand, the speaker reduces the use of personal pronouns, and sentences are mostly expressed in passive construction in impersonal English. Personal style uses active voice while impersonal style uses passive voice. In technical writing, such as in

report writing, proposal writing, and notice writing, impersonal English is preferred.

Examples:

- a) We will discuss this agenda in the next meeting (Personal)
 - This agenda will be discussed in the next meeting. (Impersonal)
- b) You had better to see a doctor. (Personal)
 - It is better to see a doctor. (Impersonal)
- c) You can answer this question if you follow the correct method. (Personal)
 - This question can be answered if correct method is followed. (Impersonal)
- d) This question is too difficult for me to answer. (Personal)
 - This question is too difficult to be answered. (Impersonal)

4. American and British English

A particular language differs in different geographical areas or regions. The difference lies in the spelling of words, pronunciation, and grammar or usage. The same case is true with American and British English.

Difference in spelling.

BrE	AmE
Centre	Center
Colour	Color
Dialogue	Dialog
Honour	Honor
Cheque	Check
Technique	Technic
Travelling	Traveling
Fibre	Fiber
Theatre	Theater
Analyse	Analyze
Programme	Program
Organise	Organize
Defence	Defense

Difference in meaning of words.

British	American
Shop	Store
Petrol	Gasoline/gas
Lorry	Truck
Government	Administration
Shareholder	Stockholder
Autumn	Fall
Exercise book	Workbook/note book
Banknote	Bill

Difference in grammar.

a. The use of repeated subject pronoun

One secures good marks if he/she studies hard. (AmE)

One secures good marks if one studies hard. (BrE)

b. Use of 'than' and 'from'

Their opinion with regard to the development is different **than** ours. (AmE)

Their opinion with regard to the development is different **from** ours. (BrE)

c. Expressions with suggest, propose, demand, recommend, advise, request, etc. For example,

The doctor suggested that the patient should take this medicine. (BrE)

The doctor suggested that the patient take this medicine. (AmE)

It is recommended that he should take this course. (BrE)

It is recommended that he take this course. (AmE)

The teacher orders that the student should do the homework. (BrE)

The teacher orders that the student do the homework. (AmE)

5. Written and Spoken English

Written English is far more structured than conversational English. Written English is always formal, whereas spoken English can be formal or informal, depending on the situation.

Example.

- a. Uhhh...your name? (spoken)
 - What is your name? (written)

Reading Comprehension (for B Arch.)

1. The Present is the Key to the Past

Synopsis

"The Present is Key to the Past" is a phrase commonly associated with the principle of uniformitarianism in geology, which suggests that the same natural processes we observe today have been at work throughout Earth's history. This concept is fundamental to understanding the processes that have shaped our planet over geological time scales. The phrase emphasizes the importance of studying present-day geological processes and using them as a guide to interpreting past geological events. By observing and understanding how natural forces such as erosion, sedimentation, and volcanic activity operate in the present, scientists can make informed interpretations about the geological history of the Earth.

In the context of geology, the principle of uniformitarianism was popularized by James Hutton, often referred to as the "father of modern geology," in the late 18th century. Hutton argued that the Earth is shaped by gradual and ongoing processes that can be observed in action today. He believed that the key to understanding the Earth's history lies in studying these present-day processes and extrapolating them backward in time to explain past geological events. This idea was revolutionary at the time, as it challenged prevailing notions that geological features were primarily the result of catastrophic events such as biblical floods or divine interventions.

One of the key implications of uniformitarianism is that geological processes operate at a relatively constant rate over long periods of time. This means that the slow accumulation of sediments, the gradual erosion of mountains, and other geological phenomena we observe today can be used to interpret similar processes that occurred in the past. By studying rock layers, fossils, and other geological evidence, scientists can reconstruct past environments and events, such as ancient climates, the evolution of life forms, and the formation of continents. The principle of uniformitarianism has been instrumental in shaping the field of geology and our understanding of Earth's history. It has provided a framework for interpreting geological evidence and has led to significant advances in our knowledge of the planet's past. By recognizing the importance of the present in understanding the past, geologists have been

able to unravel the mysteries of Earth's history and gain insights into the processes that have shaped our world.

In summary, "The Present is Key to the Past" encapsulates the principle of uniformitarianism in geology, which emphasizes the importance of studying present-day geological processes to understand the Earth's history. This principle has revolutionized the field of geology, providing a framework for interpreting geological evidence and advancing our understanding of the planet's past.

Some Questions with Their Answers

Q. no. 1) How do different types of coral reefs develop?

Charles Darwin made significant contributions to our understanding of coral reef formation through his work on the theory of coral reef development. In 1842, Darwin published his theory of coral reef formation in his book "The Structure and Distribution of Coral Reefs." His theory provided a comprehensive explanation for the formation of different types of coral reefs based on observations he made during his voyage on the HMS Beagle.

Coral reefs develop through a complex process involving the growth and accumulation of coral polyps, which are tiny animals that belong to the phylum Cnidaria. There are three main types of coral reefs, each with its own development process:

- a. **Fringing Reefs:** These reefs are the most common and develop close to the shoreline, often bordering islands or continents. Fringing reefs begin as a narrow band of coral that grows along the shoreline and extends seaward. Over time, as the coral polyps continue to grow and deposit calcium carbonate skeletons, the reef grows both upwards and outwards, forming a fringe around the coastline.
- b. **Barrier Reefs:** Barrier reefs are similar to fringing reefs but are separated from the mainland by a lagoon. They typically form farther offshore and are separated from the shore by a deeper channel or lagoon. Barrier reefs begin as fringing reefs that grow seaward and are separated from the mainland by the gradual subsidence of the land

or rising sea levels. The lagoon between the reef and the shore can vary in depth and width.

- c. **Atolls:** Atolls are circular or oval-shaped coral reefs that surround a central lagoon. They often form from the gradual subsidence of volcanic islands that were once surrounded by fringing reefs. As the volcanic island sinks and erodes over time, the fringing reef continues to grow upward. Eventually, the island disappears beneath the water, leaving behind a ring-shaped coral reef with a central lagoon—the atoll.

The development of coral reefs is influenced by various factors, including the availability of suitable substrate for coral settlement, water depth, temperature, light, and water quality. Coral reefs are highly diverse ecosystems that provide crucial habitats for marine life and contribute to shoreline protection and nutrient cycling in marine environments.

Q. no.2) What are three main things that help us to explain landscape?

The study of landscapes and their formation is a multidisciplinary field that involves contributions from various scientific disciplines, including geology, geography, ecology, environmental science, and geomorphology. Within these disciplines, numerous researchers, scientists, and scholars have contributed to our understanding of landscape formation and evolution. Understanding landscapes involves considering three main elements:

- a. **Knowledge of Natural Laws:** This refers to understanding the fundamental principles governing natural processes, such as erosion, weathering, sedimentation, and tectonic activity. This knowledge helps us comprehend the underlying mechanisms shaping landscapes.
- b. **Identification of Causes of Change:** It's crucial to identify the various factors that drive changes in landscapes. These causes can be diverse, including geological forces, climatic variations, human activities, or biological interactions. Recognizing these causes allows us to trace the origins of landscape features and changes over time.
- c. **Observation of Effects in the Landscape:** By studying the visible effects of natural processes and human activities in landscapes, we can infer valuable information about their history and evolution. These effects manifest as landforms, soil patterns, drainage networks, and vegetation cover, among others.

Different approaches in geomorphology utilize combinations of these elements. For instance, the inductive approach relies on observations of both causes and effects to develop theories and laws. In contrast, the deductive approach uses knowledge of causes and natural laws to predict the effects or outcomes in landscapes. Examples of deductive studies include Charles Darwin's work on coral reefs and W. M. Davis's cycle of erosion.

In addition to these traditional approaches, some geomorphologists use a third method called 'abduction.' This approach involves starting with the observed effects or landscape features and then using knowledge of natural laws to infer the likely causes behind them. While deductive and inductive methods are commonly taught in scientific practice, abduction provides another valuable tool for understanding landscape formation.

Throughout the history of landscape investigation, from early landscape detectives to modern geomorphologists, the interplay of observations and ideas has been essential for gaining insights into landscape histories. This combination of knowledge of natural laws, identification of causes, and observation of effects continues to drive advancements in our understanding of landscapes and their evolution.

Q.no.3) What do you mean by success theory? Define it.

A successful theory in science is one that not only provides a satisfactory explanation for a particular phenomenon but also demonstrates longevity and compatibility with other established theories and observations. Here's a refined definition:

A successful scientific theory is characterized by its ability to explain a specific phenomenon thoroughly. However, its success is not limited to this aspect alone. A truly successful theory typically surpasses other competing theories in its explanatory power, or it integrates seamlessly with existing theories and concepts, often shedding light on related phenomena.

For instance, Charles Darwin's theory of coral reef development not only provided a comprehensive explanation for the formation of coral reefs but also outperformed alternative theories in its consistency with observed facts. Moreover, Darwin's theory has withstood the test of time, remaining relevant even in the face of new ideas like plate tectonics, which led to the rejection of many other competing theories.

Similarly, Louis Agassiz's insights into the ice age, though refined by subsequent observations and detailed chronologies, proved to be robust in explaining landscapes across diverse geographical settings. Agassiz's ideas gained further support with Milutin Milankovitch's identification of orbital variations as a major driver of glaciations, reinforcing the validity of Agassiz's initial theories.

James Hutton's concept of the slow geological cycle, which emphasized natural forces over supernatural ones in shaping the Earth's surface over immense time spans, laid the groundwork for modern geomorphological thinking. While some of Hutton's specific ideas have been revised or deemed inadequate with advancements in knowledge, his overarching framework has been instrumental in shaping our understanding of landscape evolution.

In summary, a successful scientific theory not only provides a comprehensive explanation for observed phenomena but also endures over time and aligns with complementary theories, contributing to a coherent and robust scientific framework.

Q. no. 4) How can you claim that the present is the key to the past?

The assertion that "The Present is Key to the Past" encapsulates the principle of uniformitarianism in geology, which suggests that the same natural processes we observe today have been at work throughout Earth's history. The phrase emphasizes the importance of studying present-day geological processes and using them as a guide to interpreting past geological events. By observing and understanding how natural forces such as erosion, sedimentation, and volcanic activity operate in the present, scientists can make informed interpretations about the geological history of the Earth. The idea of uniformitarianism is fundamental to our understanding of the Earth's geological history and has several key implications that support the claim that the present is indeed the key to the past.

- a. Consistency of Natural Processes:** One implication of uniformitarianism is that geological processes, such as erosion, sedimentation, and volcanic activity, operate at relatively constant rates over long periods of time. By studying these processes in action today, scientists can gain insights into how they may have shaped the Earth's surface in the past. For example, observing how rivers erode and deposit sediment can help geologists understand how ancient river systems may have formed and evolved.

- b. Interpretation of Geological Features:** The principle of uniformitarianism allows scientists to interpret geological features based on present-day analogs. For instance, the layering of sedimentary rocks can be understood as the result of gradual deposition over time, similar to what is observed in modern environments like river deltas or ocean floors. This approach enables geologists to reconstruct past environments and understand how they have changed over time.
- c. Fossil Record and Evolution:** Uniformitarianism is also crucial for interpreting the fossil record and understanding the evolution of life on Earth. By studying present-day ecosystems and the processes of fossilization, scientists can infer how ancient ecosystems may have functioned and how species have evolved over geological time scales.
- d. Long-Term Environmental Changes:** Finally, uniformitarianism provides a framework for understanding long-term environmental changes, such as climate variations and the movement of continents. By studying present-day climate patterns and the mechanisms driving them, scientists can make inferences about past climates and the factors that have influenced them.

The principle of uniformitarianism, as popularized by James Hutton, has revolutionized the field of geology by emphasizing the importance of studying present-day processes to understand the Earth's history. By recognizing the continuity of natural processes over time, geologists have been able to unravel the mysteries of the Earth's past and gain insights into the processes that have shaped our planet. This approach highlights the interconnectedness of geological phenomena across different time scales and underscores the value of studying the present as a key to understanding the past.

Q. no. 5) What are the basis differences between Darwin's theory and W.M. Davis' theory related to landscape?

The theories proposed by Charles Darwin and William Morris Davis are based on different scientific disciplines and focus on distinct aspects of the natural world. Here are some key differences between Darwin's theory of evolution and Davis' theory of landscape evolution.

i) Disciplinary Focus:

- Darwin's theory of evolution is primarily rooted in biology and focuses on the process of natural selection as the mechanism driving the evolution of species over time.
- Davis' theory of landscape evolution is rooted in geology and geomorphology, focusing on the processes that shape the Earth's surface features, such as landforms and drainage patterns, over geological time scales.

ii) Subject of Study:

- Darwin's theory deals with the evolution of life forms, explaining how species adapt and change over generations in response to environmental pressures.
- Davis' theory deals with the evolution of landscapes, explaining how geological processes like erosion, weathering, and tectonic activity shape the Earth's surface features.

iii) Time Scale:

- Darwin's theory operates on biological time scales, which involve changes in species over thousands to millions of years.
- Davis' theory operates on geological time scales, which involve changes in landscapes over millions to billions of years.

iv) Mechanisms:

- Darwin's theory proposes natural selection as the primary mechanism driving evolutionary change, where organisms with advantageous traits are more likely to survive and reproduce.
- Davis' theory proposes a variety of geological processes (e.g., erosion, deposition, tectonic uplift) as the mechanisms shaping landscapes, with an emphasis on the concept of the "cycle of erosion" to explain the evolution of landforms.

v) Impact:

- Darwin's theory has had a profound impact on biology, revolutionizing our understanding of the diversity of life and providing a unifying framework for the field of evolutionary biology.

- Davis' theory has had a significant impact on the field of geomorphology, providing a framework for understanding the formation and evolution of landforms and landscapes.

In summary, while both Darwin's theory of evolution and Davis' theory of landscape evolution seek to explain patterns of change over time, they do so in different scientific domains (biology vs. geology) and focus on different aspects of the natural world (life forms vs. landscapes), operating on different time scales and employing different mechanisms to explain their respective phenomena.

Q.no.6) Describe and interpret the contribution of Charles Darwin concerning coral reefs and about unfamiliar landscape. Make the diagram of the evolution of coral reefs.

Charles Darwin made significant contributions to our understanding of coral reefs through his extensive research and observations during his voyage on the HMS Beagle. His work on coral reefs, detailed in his book "The Structure and Distribution of Coral Reefs" published in 1842, laid the groundwork for modern theories of coral reef formation and evolution.

Darwin's key contributions can be summarized as follows:

i) Theory of Coral Reef Formation.

- Darwin proposed a theory for the formation of coral reefs based on his observations of different types of coral reefs, including fringing reefs, barrier reefs, and atolls.
- He suggested that coral reefs are formed by the growth of coral polyps on submerged volcanic or oceanic islands. As the volcanic island subsides or the sea level rises, the coral continues to grow upwards, forming a fringing reef. Over time, as the island sinks further or the sea level rises, the reef grows outward and forms a barrier reef. If the island eventually subsides completely below sea level, only the coral ring remains, forming an atoll.

ii) Subsidence Theory.

- Darwin's theory emphasized the role of subsidence (either due to volcanic activity or changes in sea level) in the formation of coral reefs. He argued that

this subsidence, combined with the upward growth of coral, explains the formation of the different types of reefs.

iii) Observational Evidence.

- Darwin supported his theory with extensive observational evidence gathered during his voyage, including detailed surveys of coral reefs in the Pacific and Indian Oceans.
- He documented the various stages of reef development and the distribution of coral species, providing empirical support for his theories.

iv) Impact on Geology and Biology.

- Darwin's work on coral reefs contributed to both geology and biology. In geology, his theory of reef formation provided a naturalistic explanation for the origin of these complex structures. In biology, his observations of coral reefs and their ecological relationships added to his body of evidence supporting the theory of evolution.

2. The changing Landscape

Synopsis

"The Changing Landscape" addresses various aspects of landscapes and their study by geomorphologists. The text addresses the following issues:

i) What are Landscapes?

- Landscapes refer to the visible features of an area of land, including the physical elements such as mountains, valleys, rivers, and the living elements like vegetation and human structures. It encompasses the overall appearance of a region and is shaped by natural processes and human activities.

ii) How and Why Do Geomorphologists Study Landscapes?

- Geomorphologists study landscapes to understand the processes that shape the Earth's surface over time. They use various scientific methods, including field observations, laboratory experiments, and computer modeling, to analyze landforms and their evolution. By studying landscapes, geomorphologists can

gain insights into geological processes, environmental changes, and the impact of human activities on the Earth's surface.

iii) What Questions Do Geomorphologists Pose About Landforms?

- Geomorphologists ask questions about the formation, evolution, and characteristics of landforms. They seek to understand the forces and processes that shape landforms, such as erosion, weathering, tectonic activity, and sedimentation. They also investigate how landforms change over time and how they interact with the environment.

iv) To What Do Landforms Range from?

- Landforms can range from small-scale features like hills, valleys, and dunes to large-scale features like mountain ranges, plateaus, and river systems. They can be the result of various geological processes acting over different time scales, leading to a wide variety of shapes and forms across the Earth's surface.

v) What is the Second Major Building Block of Geomorphology?

- The second major building block of geomorphology, after landscapes, is the study of processes that shape the Earth's surface. This includes the examination of natural forces such as erosion, deposition, weathering, and tectonic activity, as well as the human impact on landscapes through activities like urbanization, deforestation, and agriculture.

In summary, "The Changing Landscape" explores the nature of landscapes, the methods and purposes of their study by geomorphologists, the questions posed about landforms, the wide range of landform types, and the key building blocks of geomorphology. It provides insights into how landscapes are shaped by natural processes and human activities, highlighting the dynamic nature of the Earth's surface.

Some Questions with Their Answers

Q.no.1) How and why geomorphologists study landscape?

Geomorphologists delve into the study of landscapes, focusing on the Earth's surface and the intricate processes that shape it, such as topography. This field is not confined to a single discipline but rather intersects with various fields like hydrology, ecology, climatology, and human geography. Geomorphology is unique in that it is a historical science, concerned with the changes that occur over time.

A fundamental principle in geomorphology is the recognition that the outcomes of events are heavily influenced by specific conditions at the time and location of the event. For instance, an earthquake of identical magnitude and location may yield differing levels of damage due to varying factors.

The discipline of geomorphology revolves around three key elements: landforms, processes, and the evolution of landscapes over time. These components are interconnected, forming what is known as the "geomorphological system" or "Earth surface system." This systems-based approach is crucial for understanding the complex and dynamic nature of geomorphological processes.

Landforms, which are the physical features of the Earth's surface, come in diverse forms, ranging from familiar ones like river valleys and mountain ranges to more obscure ones like dolines and yardangs. They are defined by their topography and comprise a mix of elements such as sediments, rocks, water, and organic life.

Geomorphologists dedicate significant effort to identifying, measuring, and naming landforms, often using local terms. Efforts have also been made to standardize terminologies globally. Philosophically, there has been debate within the discipline about whether landforms are genuine entities or 'natural kinds,' echoing similar discussions in the field of biology regarding the concept of 'species.'

In addition to their diversity in form, landforms also vary in the timescales over which they develop. While smaller landforms generally evolve more rapidly than larger ones, there is considerable variability in development times. Geomorphologists use logarithmic graphs to visualize this wide range of sizes and timescales in landform development.

In summary, geomorphologists study landscapes to unravel the processes that sculpt the Earth's surface over time. They adopt an interdisciplinary approach, recognizing the interplay between landforms, processes, and landscape evolution. This holistic perspective allows them to appreciate the dynamic nature of geomorphological systems.

Q. no.2 What questions do geomorphologists ask about landforms?

Geomorphologists are driven by a series of key questions about landforms, seeking to unravel the processes that produce specific types of landforms, their rates of development, and their persistence within landscapes. They are particularly interested in understanding the relationships between landforms and various aspects of the Earth's environment, including life and global change. Their inquiry extends to the contribution of landforms to the overall topography of the Earth.

The second major building block of geomorphology is the study of Earth surface processes, which are the mechanisms that sculpt the materials comprising the Earth's surface and shape the landscape. Geomorphologists recognize two primary types of Earth surface processes: exogenic processes, which operate externally through climatic systems like wind and waves, and endogenic processes, driven by internal energy sources such as volcanic and tectonic activities. They perceive the development of landscapes as an ongoing interplay between these two sets of processes.

Earth surface processes can manifest in various ways, ranging from slow processes like soil grain separation due to frost action to rapid events like rockslides that can transport massive amounts of material in a matter of seconds. These processes can occur locally or regionally and can impact landscapes on scales ranging from centimeters to kilometers. Understanding the spatial and temporal dynamics of Earth surface processes is crucial for linking them to the formation of landforms and comprehending their broader function in shaping landscapes.

Geomorphologists have also sought to establish connections between geomorphological processes and ecological processes, recognizing the mutual influences of weathering, nutrient cycling, and other ecological phenomena. Additionally, they are interested in understanding how Earth surface processes interact with other processes within the Earth system, such as biogeochemical cycling and human activities.

The third component of geomorphology involves studying the evolution of landscapes over time. While this aspect of study fell out of favor for a period, it has seen a resurgence with the introduction of new dating techniques like radiometric dating. Geomorphologists now seek to understand the long-term changes in landscapes, considering periods spanning millions of years, such as the Cenozoic era, as well as more recent periods marked by significant human impact, including the last 12,000 years.

In summary, geomorphologists pose a wide range of questions about landforms, seeking to understand their formation, development, and persistence within landscapes. Their inquiries encompass the interplay between Earth surface processes, the contribution of landforms to the Earth's topography, and the evolution of landscapes over long periods of geological time, including the impacts of human activities.

Q.no.3) To what extends do landforms range from?

Landforms encompass a variety of features on the Earth's surface that contribute to its diverse terrain. They range from large-scale structures like mountains, hills, plateaus, and plains to smaller formations such as buttes, canyons, valleys, and basins. These landforms are shaped by a combination of geological processes, including tectonic activity, erosion, and sedimentation.

- i) **Mountains:** These are imposing, elevated landforms that rise prominently above their surroundings. They are typically formed by tectonic activity, where the Earth's crust is uplifted due to forces within the Earth.
- ii) **Valleys:** Valleys are low-lying areas enclosed by higher land. They can be created through erosion, as water and wind gradually wear away the surrounding landscape over time.
- iii) **Plateaus:** Plateaus are expansive, flat or gently sloping highlands that are elevated above the surrounding terrain. They can form through various geological processes, including erosion and tectonic forces.
- iv) **Plains:** Plains are vast, flat regions of land that often lie close to sea level. They are frequently formed by the deposition of sediment by rivers or glaciers, resulting in expansive, relatively flat landscapes.

- v) Hills: Hills are smaller landforms that rise above the surrounding land. They can be shaped by erosion or tectonic forces, and they often contribute to the diversity of the Earth's topography.
- vi) Cliffs: Cliffs are steep, vertical rock faces that extend upward from the land. They are often formed by the erosive action of water or wind, gradually carving out these dramatic features over time.
- vii) Coastlines: Coastlines are the meeting points between land and sea. They can vary widely in their characteristics, ranging from rocky cliffs to sandy beaches. Coastlines are shaped by a complex interplay of geological processes, including erosion and sedimentation, influenced by the actions of both water and land.

These diverse landforms not only define the Earth's surface but also play a crucial role in shaping its landscapes and ecosystems. Each type of landform has its unique characteristics and is a result of specific geological processes acting over varying timescales.

Q. no. 4) What are the three building blocks of geomorphology? Explain them in brief.

According to the text provided, the first, second, and third building blocks of geomorphology are as follows:

- i) **Landform Processes:** The first building block involves the study of landforms, their formation processes, rates of development, and persistence within landscapes. This includes understanding the relationships between landforms and various aspects of the Earth's environment, such as life and global change.
- ii) **Earth Surface Processes:** The second building block is the study of Earth surface processes, which are the mechanisms responsible for shaping the Earth's surface. This includes exogenic processes, which operate externally through climatic systems like wind and waves, and endogenic processes, driven by internal energy sources such as volcanic and tectonic activities. Geomorphologists perceive the development of landscapes as an ongoing interplay between these two sets of processes.
- iii) **Landscape Evolution:** The third building block involves studying the evolution of landscapes over time. This includes understanding the long-term changes in landscapes, considering periods spanning millions of years, such as the Cenozoic era,

as well as more recent periods marked by significant human impact, including the last 12,000 years. The study of landscape evolution has seen resurgence with the introduction of new dating techniques like radiometric dating.

Q. no.5) How do the landscapes evolve and change?

Landscapes evolve and change through a complex interplay of geological processes, environmental factors, and human activities. Geomorphologists study these changes by examining the interactions between landforms, Earth surface processes, and the broader Earth system.

- i) **Tectonic Activity.** Endogenic processes driven by tectonic activity, such as the movement of Earth's lithospheric plates, can lead to the creation of new landforms such as mountains, valleys, and plateaus. Over millions of years, tectonic forces can uplift mountain ranges, create deep valleys through erosion, and shape the overall topography of a region.
- ii) **Erosion and Weathering.** Exogenic processes like erosion by water, wind, and ice, as well as chemical weathering, gradually wear down and reshape landforms. Rivers carve out valleys, glaciers sculpt mountain ranges, and wind shapes sand dunes. The rates of erosion and weathering vary based on factors such as climate, rock type, and vegetation cover.
- iii) **Sedimentation.** Exogenic processes also include sedimentation, which plays a crucial role in landscape formation. Rivers deposit sediment to form floodplains and deltas, while coastal processes like wave action and currents shape coastlines through the deposition of sediments. Over time, sedimentation can create new landforms and alter existing ones.
- iv) **Human Impact.** Human activities, especially in recent centuries, have had a significant impact on landscapes. Urbanization, agriculture, mining, and infrastructure development can lead to changes in land use, deforestation, soil erosion, and alterations to natural drainage patterns. These activities can profoundly affect landscapes and contribute to their evolution.

- v) **Long-Term Changes:** Geomorphologists study the long-term changes in landscapes over geological timescales, including the impacts of both endogenic and exogenic processes. These processes, such as plate tectonics, climate change, and sea-level fluctuations, have shaped landscapes over millions of years. By analyzing the geological record and using dating techniques like radiometric dating, geomorphologists can reconstruct past landscapes and understand how they have evolved over time.

In summary, landscapes evolve and change through the dynamic interactions of endogenic and exogenic processes, environmental factors, and human activities. Geomorphologists study these processes to gain insights into the formation, development, and transformation of landscapes over time.

Q.no. 6) Why are the landscapes important both globally and locally?

Landscapes are important both globally and locally due to their significant impact on various aspects of the environment, society, and economy. The following points elaborate on the importance of landscapes:

i) Ecological Importance.

- **Biodiversity:** Landscapes support diverse ecosystems, including forests, grasslands, wetlands, and coastal areas, which are crucial for maintaining biodiversity. They provide habitats for numerous plant and animal species, contributing to the overall ecological balance.
- **Ecosystem Services:** Landscapes provide essential ecosystem services such as water purification, carbon sequestration, and soil formation, which are vital for supporting life and sustaining human activities.

ii) Cultural and Aesthetic Value.

- **Cultural Heritage:** Landscapes often hold cultural significance and are associated with historical events, traditions, and indigenous knowledge. They contribute to the cultural identity of communities and are important for heritage conservation.
- **Aesthetic Appeal:** Many landscapes are valued for their natural beauty, scenic vistas, and recreational opportunities. They attract tourists and outdoor enthusiasts, contributing to local economies through tourism.

iii) Economic Significance.

- **Agriculture and Forestry:** Landscapes provide the basis for agricultural activities, including crop cultivation and livestock grazing. They also support forestry, providing timber, fuelwood, and other forest products.
- **Natural Resources:** Landscapes are rich in natural resources such as minerals, water, and energy sources. They serve as sites for resource extraction and contribute to economic development.

iv) Environmental Functions.

- **Climate Regulation:** Landscapes play a role in regulating climate patterns by influencing factors such as temperature, precipitation, and wind patterns. They contribute to local and regional climate stability.
- **Flood Control:** Some landscapes, such as wetlands and floodplains, help mitigate the impacts of floods by absorbing and storing excess water, reducing the risk of downstream flooding.

v) Human Well-being.

- **Health and Recreation:** Access to natural landscapes has been linked to improved mental and physical well-being. Green spaces within urban landscapes provide opportunities for recreation and relaxation.
- **Livelihoods:** Many communities depend on landscapes for their livelihoods, especially in rural areas where agriculture, fishing, and forestry are primary economic activities.

vi) Global Significance.

- **Environmental Conservation:** Landscapes are essential for global conservation efforts, as they provide habitats for endangered species and contribute to overall ecosystem health.
- **Climate Change Mitigation:** Certain landscapes, such as forests and wetlands, play a crucial role in mitigating climate change by sequestering carbon dioxide from the atmosphere.

In summary, landscapes are vital for ecological balance, cultural heritage, economic development, environmental functions, and human well-being both locally and globally.

Protecting and sustainably managing landscapes is essential for ensuring a healthy and prosperous future for both current and future generations.

3. Excerpts from Complexity and Contradiction in Architecture (1966)

Robert Venturi

Synopsis

Excerpts from "Complexity and Contradiction in Architecture" (1966) by Robert Venturi present a groundbreaking critique of modernist architectural principles and propose an alternative approach that embraces complexity and contradiction in design. The text challenges the prevailing notions of simplicity, unity, and clarity in architecture, advocating for architecture that reflects the richness and diversity of human experience.

Key ideas presented in the text include:

i) Critique of Modernism.

- Venturi critiques the rigid dogmas of modernist architecture, which prioritize functionalism, minimalism, and the elimination of ornamentation. He argues that this approach leads to sterile and homogenized environments that fail to engage with the complexities of human life.

ii) Embrace of Complexity.

- Venturi advocates for an architecture that embraces complexity rather than simplicity. He argues that architecture should be rich and multilayered, accommodating the diverse needs and experiences of its users. This complexity can be achieved through the use of diverse architectural elements, ornamentation, and historical references.

iii) Celebration of Contradiction.

- Contradiction is seen as an essential aspect of architecture, reflecting the inherent contradictions in human life. Venturi suggests that architectural elements can be both complex and simple, large and small, monumental and ordinary, creating a dynamic and engaging built environment.

iv) Importance of Context.

- The context of a building, including its historical, cultural, and physical surroundings, is crucial in shaping its design. Venturi emphasizes the need for architects to respond to the specific context of each project rather than imposing a preconceived aesthetic or ideology.

v) Rejection of Universalism.

- Venturi rejects the idea of a universal architectural language that applies to all contexts and cultures. Instead, he advocates for an architecture that is responsive to local conditions and traditions, recognizing the diversity of architectural expression around the world.

vi) Influence of Complexity Theory.

- Venturi's ideas are influenced by complexity theory, which suggests that complex systems emerge from the interaction of simple elements. He applies this concept to architecture, arguing that complex and meaningful designs can emerge from the careful composition of simple architectural elements.

Overall, "Complexity and Contradiction in Architecture" presents a bold and influential critique of modernist architectural principles, advocating for a more inclusive, context-sensitive, and complex approach to design. Venturi's ideas have had a profound impact on architectural theory and practice, challenging architects to reconsider their assumptions and embrace the richness of architectural expression.

Some Questions with their answers

1. Define convention and context in Architecture.

In the context of architecture, convention and context are two important concepts that influence the design, function, and meaning of built environments.

i) Convention in Architecture.

- Convention refers to established practices, norms, or traditions within the field of architecture. These conventions can encompass a wide range of aspects, including architectural styles, building materials, construction techniques, and spatial arrangements.
- Architectural conventions are often shaped by historical, cultural, and technological factors. They represent the accumulated knowledge and

experience of architects and builders over time and are often codified in architectural theories, design principles, and building codes.

- While conventions provide a framework for architectural practice and can contribute to the continuity of architectural traditions, they can also be challenged and reinterpreted by architects seeking innovative approaches to design.

ii) Context in Architecture.

- Context in architecture refers to the broader physical, social, cultural, and environmental circumstances that surround a building or architectural project.
- Physical context includes the immediate surroundings of a building, such as neighboring structures, topography, climate, and natural features. Understanding the physical context is crucial for ensuring that a building integrates harmoniously with its environment and responds appropriately to site-specific conditions.
- Social and cultural context encompasses the social, historical, and cultural factors that influence the design and use of buildings. This includes considerations of local customs, traditions, lifestyles, and societal values that may shape architectural preferences and requirements.
- Environmental context involves the ecological and sustainability considerations that inform architectural design, including factors such as energy efficiency, resource use, and environmental impact. Architects must consider the environmental context to create buildings that are ecologically responsible and resilient.
- Architectural design that takes context into account aims to create buildings that are not only functional and aesthetically pleasing but also responsive to the needs and characteristics of their surroundings. Contextual architecture seeks to establish a meaningful relationship between buildings and their context, enhancing the overall quality of the built environment.

In conclusion, convention in architecture refers to established practices and norms, while context encompasses the broader physical, social, cultural, and environmental factors that influence architectural design. Understanding and creatively engaging with both convention and context are essential for creating architecture that is both responsive and innovative, respecting tradition while embracing the needs and characteristics of its surroundings.

2. Define juxtaposition in Architecture.

In architecture, juxtaposition refers to the act of placing two or more architectural elements, such as buildings, structures, or design features, side by side or close together to create a contrast or comparison between them. This technique is often used to highlight differences in style, form, scale, materiality, or function, thus creating visual interest and complexity in the overall composition.

Juxtaposition can be employed in various ways in architectural design:

- i) **Contrasting Styles:** Placing buildings or architectural elements of different styles next to each other, such as a modern building next to a historic structure, to emphasize the differences in design approaches and aesthetics.
- ii) **Scale and Proportion:** Using elements of different sizes or proportions in close proximity to create a sense of scale contrast, where larger elements may dominate the composition while smaller ones provide a sense of detail or intricacy.
- iii) **Material Contrast:** Combining different materials, textures, or finishes in adjacent elements to create visual and tactile contrast, highlighting the material properties and their relationship to the surrounding environment.
- iv) **Function and Context:** Positioning buildings with different functions or purposes next to each other to create a dialogue between them and their surrounding context, emphasizing the diversity of activities within a specific area.
- v) **Temporal Contrast:** Introducing elements from different time periods, such as historic and contemporary architecture, to showcase the evolution of architectural styles and techniques over time.

By intentionally juxtaposing architectural elements, designers can create dynamic compositions that engage viewers and provoke thought about the relationships between various architectural forms, functions, and contexts.

3. What do you mean by complexity and contradiction in Architecture? Explain them.

The concept of complexity and contradiction in architecture was introduced by Robert Venturi through his book entitled "Complexity and Contradiction in Architecture", published in 1966. In this influential work, Venturi challenges the modernist principles that were dominant in architectural discourse at the time and proposes an alternative approach to architecture that embraces complexity and contradiction as essential qualities.

i) **Complexity in Architecture:** Venturi argues that architecture should embrace complexity rather than striving for simplicity and clarity. He suggests that the richness and diversity of human experience cannot be captured by rigid and uniform architectural forms. Complexity in architecture can manifest in various ways, including:

- **Layered Spaces:** Designs that incorporate multiple layers of meaning or function, allowing for different interpretations and experiences depending on the observer's perspective.
- **Contrasting Elements:** Intentional juxtaposition of elements with different scales, styles, or functions to create dynamic and visually stimulating compositions.
- **Historical References:** Incorporation of historical references or allusions that enrich the architectural narrative and create a sense of continuity with the past.

ii) **Contradiction in Architecture:** Venturi also advocates for the acceptance of architectural contradictions, challenging the idea that a building should adhere to a single, coherent design concept. He argues that embracing contradictions can lead to more nuanced and meaningful architectural expressions. Contradictions in architecture can include:

- **Formal Ambiguity:** Designs that deliberately blur the boundaries between different architectural elements or styles, creating ambiguity and multiple readings of the form.
- **Functional Contradictions:** Spaces or elements that serve multiple, sometimes conflicting, functions, reflecting the diverse needs and behaviors of users.
- **Symbolic Contradictions:** Architectural elements that convey contradictory symbolic meanings, challenging conventional interpretations and inviting new perspectives.

Venturi's ideas have had a profound impact on architectural theory and practice, influencing subsequent generations of architects to reconsider the rigid dogmas of modernism and embrace the complexities and contradictions inherent in the built environment.

5. Explain the paradox "less is more" in Architecture.

The paradox "less is more" in architecture is often associated with the minimalist movement, which emerged as a response to the complexity and ornamentation of the preceding architectural styles. This paradoxical statement suggests that simplicity and restraint in design can often lead to a more impactful and meaningful architectural experience. Here's a deeper look at what "less is more" means in the context of architecture:

- i) **Simplicity and Clarity:** "Less is more" advocates for simplicity and clarity in architectural design. Instead of using excessive ornamentation or complex forms, minimalist architecture focuses on essential elements, clean lines, and a sense of openness. This approach aims to create spaces that are visually uncluttered and easy to comprehend.
- ii) **Emphasis on Essential Elements:** By stripping away unnecessary elements, minimalist architecture highlights the essential features of a building or space. This can include emphasizing structural elements, using natural materials, or creating a sense of balance and harmony through careful composition.
- iii) **Focus on Experience:** "Less is more" also reflects an emphasis on the experiential aspect of architecture. Minimalist spaces are often designed to evoke a sense of

calmness, contemplation, or even awe through their simplicity. By reducing distractions and focusing on the essentials, minimalist architecture can create a more profound and meaningful experience for the occupants.

- iv) **Efficiency and Sustainability:** Minimalist design often aligns with principles of efficiency and sustainability. By using fewer materials and simplifying construction methods, minimalist architecture can be more environmentally friendly. Additionally, the emphasis on timeless design can lead to buildings that age gracefully and require less maintenance over time.
- v) **Visual Impact:** Paradoxically, the simplicity of minimalist architecture can often have a more significant visual impact than more elaborate designs. The clean lines, precise details, and careful use of space can create a sense of elegance and sophistication that is striking in its simplicity.

Overall, the paradox of "less is more" in architecture suggests that by focusing on the essential aspects of design and removing unnecessary embellishments, architects can create spaces that are both visually striking and deeply meaningful.

7. How is Architecture evolutionary as well as revolutionary?

Architecture is both evolutionary and revolutionary because it adapts to changing needs and embraces new ideas that challenge existing norms. Throughout history, architects have sought to create unified spaces from complex elements, leading to the evolution of architectural styles. This evolution is driven by the changing needs and desires of society, as well as advancements in technology and materials.

Revolutionary ideas in architecture can disrupt existing paradigms and create chaos or drama. These ideas may initially challenge the status quo but can ultimately lead to groundbreaking developments in the field. For example, the shift from intricate designs to simplified spaces marked a revolutionary change in architectural style.

One way to think about this is through the lens of architectural movements. Each movement represents a shift in thinking and design that reflects the cultural, social, and technological context of its time. These movements can be seen as revolutionary moments that push the boundaries of what is considered traditional or acceptable in architecture.

Additionally, architecture should embrace complexity and contradiction while also seeking simplicity and unity. This tension between complexity and simplicity is another aspect of architecture's evolutionary and revolutionary nature. Architects constantly grapple with finding the right balance between these opposing forces, leading to new approaches and innovations in design.

In summary, architecture is both evolutionary and revolutionary because it evolves in response to changing needs and embraces revolutionary ideas that challenge existing norms. This continual process of change and innovation drives the field forward, shaping the built environment in ways that reflect the complexities of human experience.

4. The Lamp of Sacrifice

Synopsis

"The Lamp of Sacrifice" is an essay by John Ruskin, a prominent art critic and social thinker of the 19th century. In this text, Ruskin explores the architectural symbolism of sacrifice as embodied in the construction of Gothic cathedrals. He uses the metaphor of a lamp, which is fueled by the sacrifices of those who built it, to illustrate the idea that great works of architecture are imbued with the spirit and labor of the people who constructed them.

Ruskin argues that the true value of a building lies not only in its physical form but also in the human effort and sacrifice that went into its creation. He emphasizes the role of craftsmanship and the collective effort of generations of builders in creating structures that transcend mere utilitarianism and become works of art.

The essay delves into the intricate details of Gothic architecture, highlighting the elements that Ruskin sees as embodying the spirit of sacrifice. He discusses the use of pointed arches, ribbed vaults, and flying buttresses as architectural innovations that allowed for the creation of larger, more awe-inspiring spaces, symbolizing the aspirations of the builders and their dedication to a higher purpose.

Ruskin also explores the moral and spiritual dimensions of architecture, arguing that buildings have the power to inspire and elevate the human spirit. He sees the Gothic cathedral as a manifestation of the collective soul of a community, reflecting its values, beliefs, and aspirations.

In summary, "The Lamp of Sacrifice" is a richly symbolic essay that explores the deeper meanings behind Gothic architecture. Ruskin uses the metaphor of sacrifice to highlight the human effort and dedication that went into creating these monumental structures, emphasizing their role as expressions of the collective spirit of a society.

i) What is the main argument of the text?

- The main argument of "The Lamp of Sacrifice" is that great works of architecture, particularly Gothic cathedrals, are imbued with the spirit and labor of the people who built them. John Ruskin argues that the true value of a building lies not only in its physical form but also in the human effort and sacrifice that went into its creation.

ii) What examples or evidence does the author use to support this argument?

- Ruskin uses the metaphor of a lamp, fueled by the sacrifices of those who built it, to illustrate the idea that architecture is more than just a physical structure. He discusses the intricate details of Gothic architecture, such as pointed arches, ribbed vaults, and flying buttresses, which he sees as embodying the spirit of sacrifice and dedication. He also emphasizes the role of craftsmanship and the collective effort of generations of builders in creating these monumental structures.

iii) How does the text contribute to our understanding of architecture and its significance?

- "The Lamp of Sacrifice" contributes to our understanding of architecture by highlighting the deeper meanings and symbolism behind monumental structures like Gothic cathedrals. Ruskin's argument underscores the idea that architecture is not just about utility but also about the expression of human values, beliefs, and aspirations. He sees buildings as reflections of the collective spirit of a society, capable of inspiring and elevating the human spirit.

iv) What are the key takeaways from the text?

- The key takeaways from "The Lamp of Sacrifice" include the idea that architecture is a form of cultural expression, reflecting the values and aspirations of a society. The text emphasizes the importance of craftsmanship

and the collective effort of builders in creating monumental structures. It also highlights the symbolic significance of architectural elements and their ability to inspire and elevate the human spirit.

In summary, "The Lamp of Sacrifice" argues that great works of architecture are more than just physical structures; they are embodiments of human effort and sacrifice, reflecting the collective spirit of a society. Ruskin's exploration of Gothic cathedrals provides insights into the deeper meanings and symbolism behind architectural masterpieces.

Questions with their answers

1. What is a building?

A building is a constructed structure that is designed to provide shelter, support, and protection for various human activities. Buildings come in a wide variety of forms and sizes, ranging from simple dwellings to complex skyscrapers and monumental structures. They can serve residential, commercial, industrial, institutional, or other purposes, and they are typically constructed using materials such as concrete, steel, wood, and glass. Buildings can be single-story or multi-story, and they can be designed for specific functions such as housing, offices, schools, hospitals, or religious worship. The design and construction of a building involve considerations of structural integrity, functionality, aesthetics, and environmental impact.

Example: The Eiffel Tower in Paris, France, is an iconic building known for its distinctive lattice iron structure. Originally built as a temporary exhibit for the 1889 World's Fair, it has become a symbol of Paris and a globally recognized landmark. While not serving a typical functional purpose like a residential or commercial building, it exemplifies how buildings can also be designed as monumental structures with symbolic and cultural significance.

2. What is architecture?

Architecture is the art and science of designing and constructing buildings and other physical structures. It encompasses the planning, designing, and construction of spaces that serve human needs and aspirations, while also considering aesthetic, cultural, social, and environmental factors. Architects are professionals trained in the field of architecture who are responsible for creating designs that are functional, safe, sustainable, and aesthetically pleasing.

Architecture goes beyond the mere construction of buildings; it involves the creation of spaces that shape human experiences and interactions. It considers not only the physical form of structures but also their cultural, historical, and symbolic meanings. Architecture is a multidisciplinary field that draws upon elements of engineering, art, sociology, psychology, and environmental science to create spaces that are both practical and meaningful.

Example: The Sydney Opera House in Australia is an architectural masterpiece renowned for its unique design featuring a series of sail-like shells. Designed by Danish architect Jørn Utzon, it has become one of the most recognizable and iconic buildings in the world. The Sydney Opera House is not only a performing arts venue but also a symbol of architectural innovation and cultural identity for the city of Sydney and Australia as a whole.

3. What sort of art is architecture?

Architecture is often considered a form of visual art, as it involves the creation of structures that are not only functional but also aesthetically pleasing. However, architecture is unique among the arts in that it is a three-dimensional, spatial art form that is experienced in a physical and often interactive way.

As a visual art, architecture involves the use of elements such as form, space, texture, light, and color to create visually compelling structures. Architects use these elements to design buildings and spaces that evoke specific emotions, convey cultural meanings, and respond to the needs of the users and the surrounding environment. The aesthetic qualities of architecture play a significant role in shaping the experience of the built environment and can have a profound impact on individuals and communities.

In addition to its visual aspect, architecture is also a functional art form, as it is concerned with creating spaces that accommodate human activities and needs. This functional aspect of architecture sets it apart from purely visual arts like painting or sculpture, as architects must consider factors such as usability, safety, sustainability, and efficiency in their designs. The balance between aesthetic considerations and practical requirements is a defining characteristic of architectural artistry.

Furthermore, architecture is a form of public art, as it shapes the physical environment in which people live, work, and interact. Buildings and structures become part of the public realm, contributing to the identity and character of cities and landscapes. Architecture can

also be a form of cultural expression, reflecting the values, beliefs, and aspirations of a society through its built environment.

In summary, architecture is a multifaceted art form that combines visual aesthetics, functionality, and cultural expression. It is a visual art that creates three-dimensional spaces, a functional art that addresses human needs and activities, and a public art that shapes the built environment and contributes to the cultural identity of societies.

4. What are the differences between building and architecture?

The terms "building" and "architecture" are related concepts in the realm of construction and design, but they differ in their scope, purpose, and artistic expression.

i) Scope and Purpose:

- **Building:** A building is a physical structure constructed to provide shelter, house activities, or serve a specific function. Buildings can range from simple residential houses to complex skyscrapers, and they are primarily designed to fulfill practical needs such as housing, working, or gathering spaces.
- **Architecture:** Architecture encompasses the art and science of designing and constructing buildings and other physical structures. It involves the creative and technical processes of planning, designing, and constructing spaces that are not only functional but also aesthetically pleasing and culturally significant. Architecture goes beyond the mere construction of buildings; it considers the broader context of the built environment and its impact on individuals and society.

ii) Artistic Expression and Design:

- **Building:** The design of a building is primarily focused on meeting functional requirements such as providing shelter, accommodating specific activities, and ensuring structural integrity. While considerations of aesthetics and style may be important, the primary goal is to create a practical and functional space.
- **Architecture:** Architecture is a form of art that involves the creative expression of ideas and concepts through the design of buildings and structures. Architects use elements such as form, space, light, and materials to create spaces that are not only

functional but also visually compelling and meaningful. Architecture often reflects cultural, social, and historical influences, and it is considered a form of cultural expression.

iii) **Cultural and Societal Impact:**

- **Building:** Buildings serve practical functions within a society, providing spaces for living, working, worshiping, and other activities. While buildings can have architectural significance, their primary impact is on a practical level, meeting the needs of individuals and communities.
- **Architecture:** Architecture has a broader cultural and societal impact beyond its functional aspects. Architectural works can become landmarks that define the identity of a city or region, symbolize cultural values, and contribute to the cultural heritage of a society. Architectural designs can also influence the way people interact with and perceive their built environment, shaping the quality of life and the sense of place.

vi) **Example:**

- **Building:** A suburban residential house designed to accommodate a family's living needs, with a focus on practicality and functionality.
- **Architecture:** The Sydney Opera House in Australia, designed by Jørn Utzon, is an iconic architectural masterpiece that goes beyond mere functionality. Its unique design has made it a symbol of architectural innovation and a cultural landmark for the city of Sydney and Australia as a whole. The Sydney Opera House is not only a functional performing arts venue but also a work of art that reflects the cultural identity and aspirations of its location.

5. What are the categories of architecture?

Architecture can be broadly categorized into several types based on various criteria such as historical periods, styles, functions, and the nature of the structures. Here are some of the main categories of architecture:

i) **Historical Periods:**

- **Ancient Architecture:** This category includes the architectural styles and structures from ancient civilizations such as the Egyptian, Greek, Roman, and Mesopotamian

civilizations. Ancient architecture is known for its monumental structures, use of columns, and intricate decorative elements.

- **Medieval Architecture:** Medieval architecture refers to the architectural styles prevalent during the Middle Ages, characterized by features like Gothic arches, vaulted ceilings, and elaborate ornamentation. This period includes Romanesque and Gothic styles.
- **Renaissance Architecture:** Renaissance architecture emerged during the Renaissance period in Europe and is characterized by a revival of classical elements from ancient Greece and Rome. It is known for its symmetry, proportion, and use of classical orders such as Doric, Ionic, and Corinthian.
- **Modern Architecture:** Modern architecture encompasses a wide range of styles that emerged in the late 19th and 20th centuries, characterized by a departure from traditional styles and an emphasis on functionalism, minimalism, and the use of new materials and technologies. This period includes movements such as Art Nouveau, Art Deco, Bauhaus, and International Style.

ii) Architectural Styles:

- **Classical Architecture:** Classical architecture refers to the architectural styles of ancient Greece and Rome, known for their use of columns, pediments, and symmetrical designs.
- **Gothic Architecture:** Gothic architecture is characterized by its pointed arches, ribbed vaults, and flying buttresses, which allowed for the construction of taller and more intricate structures such as cathedrals.
- **Baroque Architecture:** Baroque architecture is known for its dramatic and ornate style, characterized by elaborate decoration, curving forms, and a sense of grandeur.
- **Neoclassical Architecture:** Neoclassical architecture is a revival of classical architectural styles, characterized by its use of classical orders and symmetry, popular during the 18th and 19th centuries.

- **Modernist Architecture:** Modernist architecture emerged in the early 20th century and is characterized by its emphasis on function, simplicity, and the use of new materials such as steel, glass, and concrete.

iii) Functional Categories:

- **Residential Architecture:** Residential architecture focuses on the design of homes and other residential buildings, considering factors such as comfort, privacy, and the needs of the occupants.
- **Commercial Architecture:** Commercial architecture encompasses the design of buildings for commercial purposes such as offices, retail spaces, and restaurants, with a focus on functionality, branding, and customer experience.
- **Institutional Architecture:** Institutional architecture includes buildings designed for institutional purposes such as schools, hospitals, government buildings, and museums, which require specific considerations for their functions and users.
- **Industrial Architecture:** Industrial architecture involves the design of buildings for industrial purposes such as factories, warehouses, and manufacturing facilities, with a focus on efficiency, safety, and workflow.

These categories provide a framework for understanding the diverse range of architectural styles, periods, and functions that have shaped the built environment throughout history. Each category reflects the unique cultural, social, and technological contexts in which architectural works are created.

6. What is devotional architecture?

Devotional architecture refers to architectural structures that are specifically designed and built to serve religious or spiritual purposes. These structures are created to facilitate worship, meditation, rituals, and other religious practices associated with a particular faith or belief system. Devotional architecture is characterized by its focus on creating spaces that evoke a sense of spirituality, awe, and reverence.

Devotional architecture encompasses a wide range of building types and styles, reflecting the diversity of religious traditions and cultural expressions around the world. Examples of devotional architecture include temples, churches, mosques, synagogues, shrines, pagodas, and other religious buildings.

Key characteristics of devotional architecture may include:

- i) **Symbolism:** Devotional architecture often incorporates symbolic elements that are significant to the religious tradition it represents. These symbols may include religious icons, statues, paintings, scriptures, or architectural features with specific religious meanings.
- ii) **Ritualistic Spaces:** Devotional architecture provides spaces for religious rituals, ceremonies, and communal worship. These spaces are designed to accommodate specific religious practices and rituals, such as prayer halls, altars, sanctuaries, and ritual pathways.
- iii) **Spiritual Atmosphere:** Devotional architecture aims to create a spiritual atmosphere that inspires a sense of transcendence and connection to the divine. This may be achieved through the use of architectural elements such as lighting, acoustics, spatial arrangements, and ornamentation that evoke a sense of sacredness and reverence.
- iv) **Cultural Expression:** Devotional architecture often reflects the cultural and artistic traditions of the community in which it is built. It may incorporate local architectural styles, materials, and craftsmanship that are unique to a particular region or culture.
- v) **Community Spaces:** Devotional architecture serves as a focal point for religious communities, providing spaces for communal gatherings, festivals, and social activities that are integral to religious practice.

Devotional architecture plays a significant role in shaping the religious and cultural identity of communities and is often considered a form of sacred art. It reflects the spiritual beliefs, values, and aspirations of the people who create and use these spaces, serving as a tangible expression of their faith and devotion.

5. Vitruvius Architecture

Synopsis

The text “Vitruvius Architecture” focuses the following areas:

- i) **Education of the Architect:** The text emphasizes the importance of a well-rounded education for architects, covering various subjects such as theory, practice, geometry, history, philosophy, music, medicine, law, and astronomy. It suggests that a thorough education enables architects to leave a lasting impact through their work and treatises.
- ii) **Fundamental Principles of Architecture:** The fundamental principles of architecture, according to the text, include order, arrangement, eurhythmy, symmetry, propriety, and economy. These principles guide the design and construction of buildings, ensuring they are harmonious, well-proportioned, and functional.
- iii) **Departments of Architecture:** The text divides architecture into three departments: the art of building, the making of time-pieces, and the construction of machinery. Each department involves different skills and knowledge related to their respective areas of focus.
- iv) **Site Selection for Cities:** The text discusses the factors to consider when selecting a site for a city, emphasizing the importance of a healthy environment, including factors like climate, water supply, and the avoidance of marshy areas. It also touches on the testing of food and water supply to ensure the healthfulness of the site.
- v) **City Walls:** The text provides guidelines for the construction of city walls, including the recommended thickness, placement of towers, and strategies for fortification. It emphasizes the importance of durability, convenience, and beauty in the design and construction of city walls.

Overall, the text provides insights into the comprehensive education and principles that guide the practice of architecture according to Vitruvius.

Some Questions with their Answers

1. What are different fields of knowledge that architecture requires? Explain them.

An architect requires knowledge in various fields to create well-designed, functional, and aesthetically pleasing structures. Some of these fields include:

- i) **Theory and Practice:** Architectural theory provides the conceptual framework for understanding the principles and ideas behind architecture, while practical knowledge involves the technical skills needed to design and construct buildings.

- ii) Geometry: Geometry is essential for understanding spatial relationships, proportions, and the principles of structural design. It helps architects in planning and creating accurate and visually appealing designs.
- iii) History: Knowledge of architectural history is crucial for understanding the evolution of architectural styles, techniques, and movements. It provides valuable insights into the cultural, social, and technological factors that have influenced architectural design over time.
- iv) Philosophy: Philosophical studies can help architects develop a broader perspective on their work, emphasizing principles like ethics, aesthetics, and the relationship between architecture and society. It encourages critical thinking and a deeper understanding of the purpose and impact of architectural design.
- v) Music: Music can influence architectural design through its concepts of rhythm, harmony, and proportion. Understanding music can help architects create designs that resonate with a sense of balance and harmony.
- vi) Medicine: Knowledge of basic medical principles is useful for architects, especially when designing healthcare facilities or considering the health impacts of building design on occupants. It includes understanding aspects of human physiology, ergonomics, and environmental health.
- vii) Law: Legal knowledge is important for architects to understand building regulations, codes, and zoning laws. It ensures that designs comply with legal requirements and that projects are executed within the framework of the law.
- viii) Astronomy: Astronomy provides architects with knowledge of celestial phenomena such as the position of the sun, moon, and stars, which can influence building orientation, natural lighting, and climate control strategies.

By integrating knowledge from these diverse fields, architects can create designs that not only meet functional requirements but also consider broader cultural, social, and environmental contexts.

2. What are the fundamental principles of architecture? Explain them.

The fundamental principles of architecture encompass a range of concepts that guide the design and construction of buildings. These principles can be explained as follows:

- a) Order: Order in architecture refers to the arrangement and proportion of elements within a building. It involves giving due measure to the various parts of a structure and achieving a harmonious balance between them. This principle ensures that the building is visually coherent and structurally sound.
- b) Arrangement: Arrangement involves the organization and layout of architectural elements to create functional and aesthetically pleasing spaces. It includes the placement of rooms, circulation paths, and structural components to optimize the use of space and facilitate the intended activities within the building.
- c) Eurhythm: Eurhythm, or harmony of proportion, emphasizes the balanced relationship between the various parts of a building. It involves ensuring that the dimensions and proportions of architectural elements are in harmony with each other and contribute to the overall coherence of the design.
- d) Symmetry: Symmetry is the proper agreement between the parts of a building and their relation to the whole. It involves achieving a balanced distribution of elements on either side of a central axis, creating a sense of equilibrium and visual stability.
- e) Propriety: Propriety in architecture refers to the suitability and appropriateness of design choices based on functional, cultural, and contextual considerations. It involves ensuring that architectural designs are well-suited to their intended purpose, context, and user needs.
- f) Economy: Economy in architecture involves the efficient use of resources, both in terms of materials and design effort. It includes considerations of cost-effectiveness, sustainability, and optimization of design solutions to achieve the desired outcome with minimal waste.

These fundamental principles provide a framework for architects to create designs that are not only visually appealing but also functional, sustainable, and well-suited to their intended purpose and context. By applying these principles, architects can create buildings that meet the needs of users while contributing positively to their surroundings.

3. Write the meaning of economy with its stage in architecture.

In the context of architecture, economy refers to the efficient management of resources and costs throughout the design and construction process. It involves making strategic

decisions to optimize the use of materials, labor, time, and finances while achieving the desired architectural outcomes. Economy in architecture encompasses several stages:

- a) **Design Stage Economy:** During the design stage, architects aim to create efficient and cost-effective designs that meet the project requirements while minimizing unnecessary expenses. This involves considering factors such as building size, layout, material selection, and construction methods to achieve the best balance between cost and quality.
- b) **Material Economy:** Material economy involves the judicious selection and use of building materials to ensure that they are both suitable for their intended purpose and cost-effective. This includes considering factors such as material durability, availability, sustainability, and cost-efficiency.
- c) **Construction Stage Economy:** In the construction stage, economy involves efficient project management to control costs, schedules, and resources. This includes strategies to streamline construction processes, minimize waste, optimize labor efficiency, and manage subcontractors effectively.
- d) **Operational Economy:** Operational economy considers the long-term costs associated with operating and maintaining a building over its lifecycle. This includes factors such as energy efficiency, maintenance requirements, lifecycle costs, and adaptability to future needs.
- e) **Sustainable Economy:** Sustainable economy in architecture focuses on designing and constructing buildings that minimize negative environmental impacts and promote resource efficiency. This involves integrating sustainable design principles, such as passive solar design, energy-efficient systems, and use of recycled materials, to reduce the environmental footprint of buildings.

By integrating economy into each stage of the architectural process, architects can create designs that are not only cost-effective but also sustainable, functional, and aesthetically pleasing. This holistic approach to economy ensures that buildings are efficient to build, operate, and maintain while meeting the needs of users and the broader community.

4. What do you mean by Eurhythm in Architecture? Describe its elements.

In architecture, Eurhythmmy refers to the harmony of proportion and rhythm in the design of buildings. It involves the careful arrangement of architectural elements to create a sense of balance, order, and visual harmony. Eurhythmmy is based on the idea that well-proportioned and balanced designs are more aesthetically pleasing and create a sense of coherence and unity. Several elements contribute to Eurhythmmy in architecture.

- a) Proportion: Proportion refers to the relationship between different parts of a building or its elements, such as windows, doors, columns, and facades. Architects use principles of proportion to create harmonious compositions that are visually balanced and pleasing to the eye. This can involve mathematical ratios, such as the golden ratio or other proportional systems, to achieve a sense of balance and beauty.
- b) Scale: Scale refers to the size of architectural elements in relation to the human body and the overall context of the building. A well-scaled building takes into account human proportions and the surrounding environment to create a sense of intimacy, comfort, and appropriateness.
- c) Rhythm: Rhythm in architecture involves the repetition or progression of elements to create a sense of movement and visual flow. This can be achieved through the use of repeating patterns, motifs, or architectural features that guide the eye and create a sense of continuity throughout the design.
- d) Balance: Balance refers to the distribution of visual weight in a design. It can be symmetrical, where elements are arranged equally on either side of a central axis, or asymmetrical, where visual balance is achieved through careful composition and distribution of elements.
- e) Harmony: Harmony in architecture involves the overall unity and coherence of the design. It encompasses how different elements work together to create a unified whole, with each part contributing to the overall aesthetic and functional goals of the building.

By considering these elements of Eurhythmmy in their designs, architects can create buildings that are not only visually appealing but also harmonious, balanced, and well-proportioned, contributing to a sense of coherence and unity in the built environment.

6. Interviews

Synopsis

The text focuses on the work of Charles Jencks and his book "The Language of Post-Modern Architecture." The text covers various aspects related to post-modern architecture, including its nature, how it is different from modern architecture, the problem with architects, and the concept of paradigm shifts in architecture.

- i) **Introduction:** The text introduces the topic of post-modern architecture and Charles Jencks, highlighting his influential book "The Language of Post-Modern Architecture."
- ii) **Post-Modern Architecture:** This section explains post-modern architecture as an eclectic, colorful style that emerged as a reaction to modernism, incorporating elements of pop culture, consumerism, and historical references into designs.
- iii) **Modern versus Postmodern Architecture according to Jencks:** Charles Jencks distinguishes between modern and post-modern architecture based on the intentions of the architects and the resulting designs.
- iv) **What is the nature of the language of post-modern architecture?** This section discusses the language of post-modern architecture as a rejection of strict functionalist and formalist principles, emphasizing historical references, symbolism, and ornamentation.
- v) **What is the problem with architects?** The text outlines criticisms of post-modern architecture, including accusations of shallowness, superficiality, and elitism.
- vi) **Definition of Paradigm:** The concept of paradigm in architecture is explained as a framework of assumptions, concepts, values, and practices that define a particular approach to design and construction.
- vii) **Paradigm shift in architecture:** This section discusses paradigm shifts in architecture as fundamental changes in the way architects think about design and construction, driven by factors like technological advances, societal changes, and new architectural movements.
- viii) **Conclusion:** The text concludes by summarizing the need for a new language in architecture to express the elements of "living" space and the importance of understanding paradigm shifts in architecture.

Overall, the text provides a broad overview of post-modern architecture, its characteristics, criticisms, and the concept of paradigm shifts in architecture. It references Charles Jencks' work extensively to illustrate key points about post-modern architecture.

Some Questions with Their Answers

1. What is the nature of the language of post-modern architecture?

The language of post-modern architecture is characterized by a departure from the strict functionalism and formalism of modernist architecture. Instead of adhering to a singular design philosophy focused solely on utility and simplicity, post-modern architecture embraces diversity, historical references, symbolism, and ornamentation.

Rejection of Strict Functionalism: Post-modern architecture rejects the idea that a building's form should strictly follow its function. While modernist architects aimed for simplicity and efficiency in design, post-modern architects often prioritize aesthetic expression and cultural symbolism alongside functionality.

Historical References: Post-modern architecture incorporates elements from historical styles and traditions into its designs. This can include references to classical architecture, regional styles, or even popular culture. By drawing from the past, post-modern architects create buildings that are visually rich and diverse.

Symbolism and Ornamentation: Unlike modernist architecture, which often favored minimalism and clean lines, post-modern architecture embraces symbolism and ornamentation. Buildings may feature decorative elements, intricate details, and playful touches that add layers of meaning and visual interest.

Emphasis on Expression: Post-modern architecture prioritizes expressive design that communicates meaning and identity. Buildings are seen as more than just functional spaces; they are statements that reflect cultural values, historical narratives, and the creative vision of the architect.

Diversity and Flexibility: The language of post-modern architecture is diverse and flexible, allowing for a wide range of influences and ideas to be incorporated into design. This diversity reflects a rejection of the uniformity and functionalism of modernist architecture in favor of creativity, expression, and cultural context.

In summary, the language of post-modern architecture is characterized by a departure from the rigid principles of modernism, embracing a more eclectic, expressive, and culturally rich approach to design. Buildings become more than just structures; they become narratives, expressing a wide range of meanings and ideas through their form and ornamentation.

2. What is the problem with the architects? Explain.

There are several problems associated with architects in the context of post-modern architecture. These problems are explained as follows:

Shallowness and Superficiality: Critics of post-modern architecture argue that some architects within this movement prioritize superficial aesthetic concerns over deeper intellectual and social ambitions. Instead of addressing substantial issues in their designs, they focus on creating visually striking but shallow buildings that lack depth and meaningful engagement with their surroundings or users.

Lack of Social and Cultural Relevance: Some critics argue that post-modern architecture can be disconnected from the social and cultural context in which it exists. Instead of responding to the specific needs and desires of communities, post-modern architects may prioritize individualistic or commercial goals, leading to designs that do not resonate with broader societal concerns.

Emphasis on Aesthetics Over Functionality: Post-modern architecture has been criticized for prioritizing aesthetics over functionality. While modernist architecture sought to streamline form and function, some post-modern architects may prioritize visual impact at the expense of practical considerations, leading to buildings that are less efficient or user-friendly.

Elitism and Exclusion: Another criticism is that post-modern architecture can be perceived as elitist and exclusionary. By focusing on complex, symbolic designs that may not resonate with the general public, some post-modern architects risk alienating broader audiences and creating buildings that are only appreciated by a select few.

Lack of Innovation: Some critics argue that post-modern architecture can be derivative and lacking in innovation. Instead of pushing the boundaries of architectural design, some

architects within this movement may rely too heavily on historical references or established styles, leading to a sense of stagnation or repetition in their work.

Overall, the problems associated with architects in the context of post-modern architecture revolve around issues of depth, relevance, functionality, inclusivity, and innovation. Critics argue that some architects within this movement may prioritize aesthetics and individual expression at the expense of broader societal and architectural concerns.

3. Define paradigm shift in Architecture.

In the context of architecture, a paradigm shift refers to a fundamental change in the way architects and designers conceptualize, approach, and practice their craft. This shift represents a departure from established norms, beliefs, and practices, often leading to a significant transformation in architectural theory, design principles, and construction methods. A paradigm shift in architecture typically involves:

Change in Design Philosophy: A paradigm shift may involve a change in the dominant design philosophy or ideology that guides architectural practice. This could include a shift from modernist principles, which prioritize functionalism and minimalism, to post-modern or contemporary approaches that embrace diversity, symbolism, and contextual relevance.

New Technological Advances: Advances in technology can trigger paradigm shifts by enabling architects to explore new forms, materials, and construction techniques. For example, the introduction of computer-aided design (CAD) software or digital fabrication technologies has revolutionized the way architects conceive and realize their designs.

Evolution of Cultural and Social Values: Changes in societal values, cultural trends, and environmental awareness can lead to paradigm shifts in architecture. For instance, a growing emphasis on sustainability and green building practices has prompted architects to rethink traditional design strategies and adopt more environmentally friendly approaches.

Shift in Architectural Theory: Paradigm shifts are often accompanied by changes in architectural theory and discourse. New theories or conceptual frameworks may emerge to challenge existing paradigms and offer alternative perspectives on architecture's role in society.

Impact on Built Environment: Ultimately, a paradigm shift in architecture influences the built environment by shaping the design of buildings, urban spaces, and landscapes. It can lead to the creation of innovative structures that reflect the evolving needs, values, and aspirations of society.

In summary, a paradigm shift in architecture represents a significant transformation in the way architecture is conceived, designed, and built. It is driven by changes in technology, culture, theory, and societal values, ultimately reshaping the architectural landscape and influencing the way we interact with the built environment.

4. Explain the differences between the language of modern and postmodern architecture.

The differences between the language of modern and postmodern architecture can be seen in various aspects of their design philosophies, principles, and approaches. Here are some key differences:

Design Philosophy:

Modern Architecture: Modern architecture is characterized by a focus on functionalism, simplicity, and the use of industrial materials such as steel, glass, and concrete. Form follows function, and buildings are designed to be efficient, rational, and devoid of unnecessary ornamentation.

Postmodern Architecture: Postmodern architecture rejects the strict functionalism of modernism and embraces diversity, historicism, and contextualism. It often incorporates historical references, decorative elements, and playful designs that challenge the notion of a universal architectural style.

Aesthetic Values:

Modern Architecture: Modernist buildings tend to have clean lines, geometric shapes, and a minimalist aesthetic. They prioritize visual clarity and the expression of structure and materials.

Postmodern Architecture: Postmodern buildings often feature eclectic designs that combine elements from different historical styles. They may use ornamentation, color, and symbolism to create visually striking and expressive forms.

Use of Historical References:

Modern Architecture: Modernist architects typically avoided historical references and ornamentation, aiming for a timeless and universal aesthetic.

Postmodern Architecture: Postmodern architects freely incorporate historical references, styles, and motifs into their designs, often with a sense of irony or playfulness.

Approach to Context:

Modern Architecture: Modernist architects aimed to create buildings that stood apart from their surroundings, often emphasizing stark contrasts between the old and the new.

Postmodern Architecture: Postmodern architects are more likely to consider the context of their buildings, seeking to create designs that respond to the cultural, historical, and social context of their surroundings.

Expression of Identity:

Modern Architecture: Modernist buildings often aimed for a universal, timeless aesthetic that transcended specific cultural or historical contexts.

Postmodern Architecture: Postmodern architecture celebrates diversity and individuality, often using architecture as a means of expressing identity and cultural narratives.

In summary, while modern architecture is characterized by its emphasis on functionalism, minimalism, and universalism, postmodern architecture is known for its diversity, historicism, and contextual responsiveness. Postmodern architecture challenges the conventions of modernism, embracing a more expressive and inclusive approach to design.
